1 Installation and Activation

1.1 Installation of "WIBU CodeMeter User Runtime for Windows"

FactoryViews uses the CodeMeter Runtime to access CodeMeter-based licenses. The licenses can be integrated on a USB dongle or via a license file.

Note: Administrator rights are required for installing the CodeMeter User Runtime.

Download "WIBU CodeMeter User Runtime for Windows" from the manufacturer's homepage and install it, if not already installed on your PC. Link to download page: https://www.wibu.com/support/user/user-software.html

1.2 Activate licenses

The license activation is complete.

1.3 Extract

Open "FactoryViews.exe" and extract the content to a local drive with write access, e.g. to C:\Festo Note: For extraction, a valid license of FactoryViews app (e.g. MES4 V3) must be activated.

1.4 Setup

Start the file "Setup.bat". Two actions are executed:

1. A license to run FactoryViews is automatically updated in CodeMeter if necessary. This license is independent of your MES4 licenses or licenses for additional apps and serves to protect the software. Confirm this update.

Code	eMeter	?	×
í	Information:		
	Aktualisierung für 130-2060862264 F 6000118> erfol	CmCont Firm Item greich (3	ainer 1 Mal)
		0	K

2. Path information for the web and database server are adapted to your local copy. Type "1" and "Enter" to perform the update.

1) Refresh now! (Jetzt aktualisieren!) x) Exit (Beenden) 1		~

Then terminate the setup with any key.

If you move the "FactoryViews" directory later, the setup must be run again.

2 Starting FactoryViews and MES4 V3

2.1 Configuration of Apps

In the file "FactoryViews\NodeServer\config.jsonc" settings can be made to your installation of FactoryViews.

In the "apps" section, you can enable (true) or disable (false) individual apps, as shown below.

On startup of the Control Panel, for activated apps the system first checks whether a valid license is available, if necessary, and if the app has been installed. The app is then activated on the FactoryViews user interface.

Deactivated apps are not selectable on the user interface, related services are not started, and no license check is performed.

2.2 Starting FactoryViews Control Panel

Run "FactoryViews - ControlPanel.exe".

The following services are automatically started depending on the configured range of functions:

Service	Description
NodeServer	HTTP web server for FactoryViews apps
Mes4Core	MES4 services for communication via TCP/IP and to the database
UaToMes4	MES4 interface for OPC UA (Data Access)
Apache	HTTP web server for FactoryViews apps
MySQL	SQL database server for FactoryViews apps
MongoDB	NoSQL database server for FactoryViews apps
NodeRed - MES4	Node-RED application for additional MES4 services
NodeRed - Webshop	Node-RED application to connect the Webshop to MES4
NodeRed - Stations	Node-RED based station specific applications
NodeRed - Energy	Node-RED based energy monitoring app

When starting apps for which no valid license is available, a corresponding error message appears. To avoid this, either a valid license should be available on the PC or on a connected license dongle (see section 1.2), or the app should be disabled in the configuration (see section 2.1).

NodeServer		Mes4Core	Apache	9	MySql	Mongo	DB	
Starting								

All services of activated Apps must be started successfully (blue check icon).

Otherwise stop any running services on your system, e.g. web or database server and restart the services in the control panel, or the Control Panel if needed.

When the software is started for the first time, the operating system may offer to create firewall rules. The creation is only required if the software is to be accessed from devices within the network. For purely local use, the firewall suggestions can be cancelled.

2.3 Starting the FactoryViews User Interface

Open the user interface by

- choosing "Open FactoryViews" on the Control Panel, or
- navigating in a web browser on the same PC to <u>http://localhost</u> or <u>http://127.0.0.1</u> or
- navigating in a web browser on a network connected device to http://lip where {ip} is the IP address of the host PC running the FactoryViews Control Panel, or http://lip where {ip} is the IP address of the host PC running the FactoryViews Control Panel, or http://lip where {ip} is the IP address of the host PC running the FactoryViews Control Panel, or http://mes-pc.festo.systems, if you have purchased a learning factory with MES PC and DNS service.

3 Backup and Restore

3.1 Scope of backup

The current status can be saved in an fdb file using the "Backup" function. This includes

- FactoryViews framework: All texts in all languages
- MES4 V3: Complete databases (MariaDB + MongoDB) including system configuration, workpieces, orders, database queries, station templates as well as all texts and program messages in all languages.
- Webshop: Complete database (MariaDB) including orders, products, webshop settings, but no custom added files.

3.2 Backup

Click on "Backup and restore" in the menu, "new backup" and enter the name, description and creator information.

Then click on "OK".

The backup has been created and downloaded. Depending on the browser settings, the file is typically located in the user's Downloads folder.

3.3 Restore

To restore, click Upload Data on the Backup and Restore menu and select one or more fdb backup files. Details about the backups are displayed.

On one backup card click "restore".

4 Terminating FactoryViews

To terminate the application, close the browser windows and the FactoryViews Control Panel.
