

Mini slides DGSL

FESTO

- High load capacity and positioning accuracy
- Maximum flexibility thanks to 8 sizes
- Compact

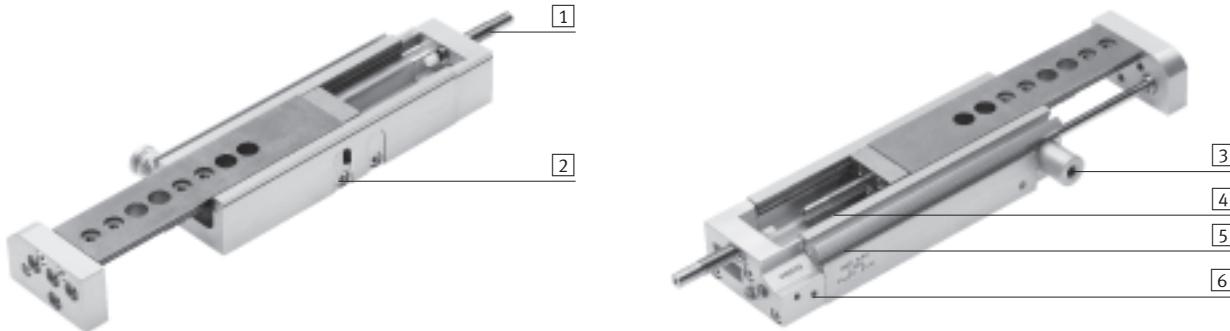

Mini slides DGSL

Key features

General

- Double-acting drives
- Versatile combination options include:
 - Drives, grippers
- System product for handling and assembly technology
- Highly flexible thanks to versatile assembly and connection options on:
 - Drive body, slide, yoke plate

The technology in detail

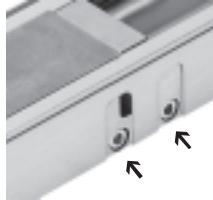

[1] Cushioning

- Choice of three types of cushioning:
 - Flexible cushioning without metallic end position (P)
 - Flexible cushioning with metallic end position (P1)
 - Hydraulic shock absorbers (Y3)

[2] Coarse stroke adjustment

- The end stop for the front end position can be shifted mechanically, e.g. to shorten the stroke

[3] Clamping unit

- Mechanical clamping, for fixing the slide in any position, frictional locking

[4] End lock

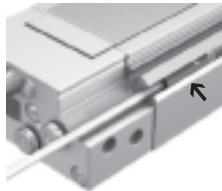

- Mechanical lock when the end position is reached, for fixing the slide in the unpressurized, retracted state, mechanical locking

[5] Innovative guide unit

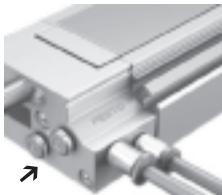

- Wide roller track, which provides extremely high rigidity
- High load capacity
- High precision
- Housing and steel slide form a guide; no accumulative tolerances

[6] Position sensing

- Proximity sensors can be integrated, therefore there are no projecting parts
- Two slots for mounting
- Clearly visible from the side and from above

[7] Compressed air connections

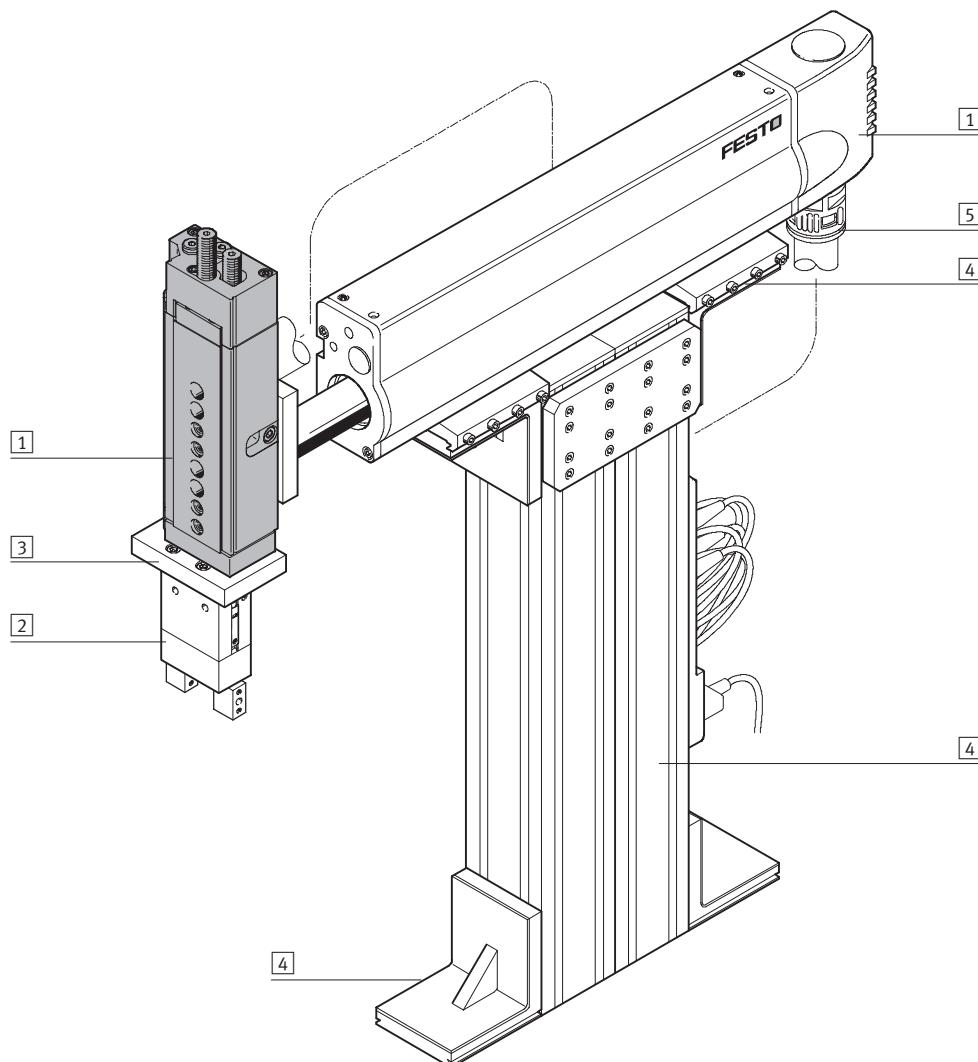

- Options on two sides:
 - On front face
 - At the side

Technical data

Dynamic characteristic load values

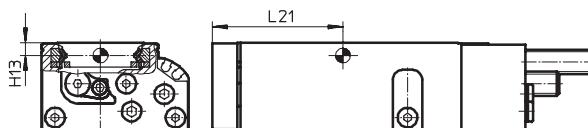

Torques are indicated with reference to the centre of the guide. They must not be exceeded in the dynamic range. Special attention must be paid to the cushioning phase.

If the drive is subjected to more than two of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

$$\frac{|F_y|}{F_{y\max.}} + \frac{|F_z|}{F_{z\max.}} + \frac{|M_x|}{M_{x\max.}} + \frac{|M_y|}{M_{y\max.}} + \frac{|M_z|}{M_{z\max.}} \leq 1$$

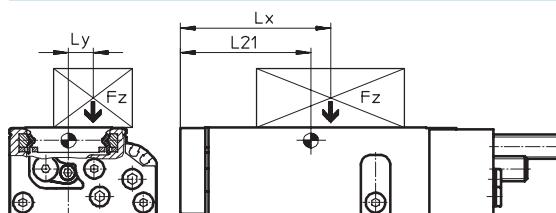

Position of guide centre

+ plus stroke length

Calculation example

Given:

Mini slide	= DGSL-10
Stroke length	= 80 mm
Lever arm L _x	= 50 mm
Lever arm L _y	= 30 mm
Weight F _z	= 0.8 kg
Acceleration a	= 0 m/s ²

To be found:

F_y, F_z, M_x, M_y, M_z
and
verification of function with combined load

Solution:

$$L21 = 83 \text{ mm from table}$$

$$F_y = 0 \text{ N}$$

$$F_z = m \times g \\ = 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 = 7.848 \text{ N}$$

$$M_x = m \times g \times L_y \\ = 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 \times 30 \text{ mm} = 0.236 \text{ Nm}$$

$$M_y = m \times g \times [(L21+\text{stroke})-L_x] \\ = 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 [(83 \text{ mm} + 80 \text{ mm}) - 50 \text{ mm}] = 0.886 \text{ Nm}$$

$$M_z = 0 \text{ Nm}$$

Combined load:

$$\frac{|F_y|}{F_{y\max.}} + \frac{|F_z|}{F_{z\max.}} + \frac{|M_x|}{M_{x\max.}} + \frac{|M_y|}{M_{y\max.}} + \frac{|M_z|}{M_{z\max.}} \\ = 0 + \frac{7.848 \text{ N}}{1200 \text{ N}} + \frac{0.2366 \text{ Nm}}{18 \text{ Nm}} + \frac{0.886 \text{ Nm}}{12 \text{ Nm}} + 0 = 0.094 \leq 1$$

Mini slides DGSL

Technical data

Adjustable end-position range

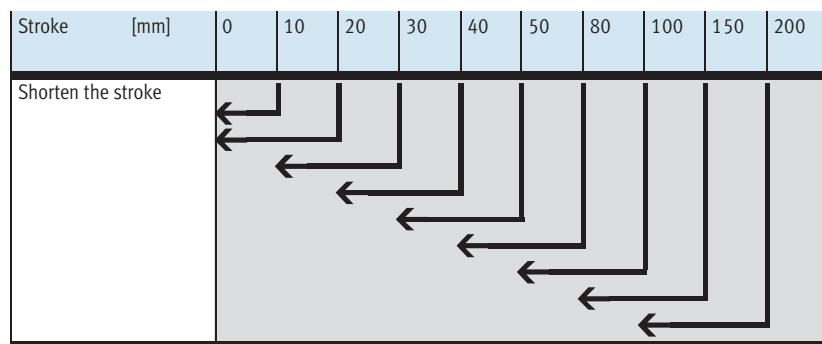

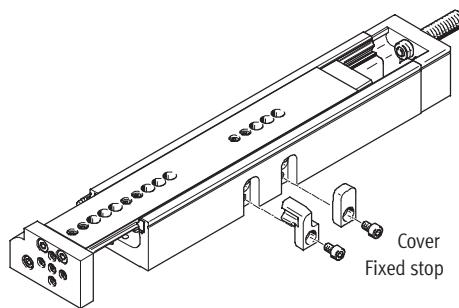

Coarse adjustment of forward end position

The mini slide DGSL allows the front fixed stop to be adjusted by moving the cover.

This allows a stroke reduction through to the next but one standard stroke.

Advantages:

- Can be flexibly adapted to the application
- Integrated, therefore less conversion work required
- Extensive setting range

Precision adjustment of end positions

The stroke can be adjusted precisely using the cushioning components (on the slide and in the end cap).

Step 1:

Release clamping element.

Step 2:

Manually position slide in the desired end position.

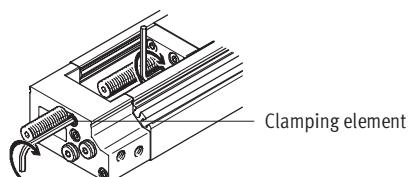

Step 3:

Rotate the stop element using an Allen key until the end position is obtained.

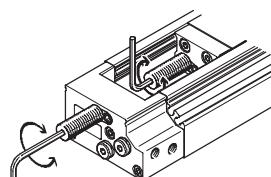

Advantages:

- Precision adjustment fixed by means of clamping element
- No readjustment necessary, position is 100% maintained by locking or load
- Simple and fast setting; only one tool required

Step 1

Step 2 + 3
