Ideal for all standard applications

Successfully proven over many years – D series service units.

Available in a highly robust, universal and standardised metal version. The keenly priced polymer components DB are tailored to core functions. They are also upgradeable because they can be combined with the metal components in the series.

Whether it's the metal version, polymer version, ... or both, ... rapid availability guaranteed.

Proven a million times over

Maximum sturdiness and reliability thanks to the metal housing, the all-metal bowl guard and the sturdy fittings. For compressed air preparation in applications with standard compressed air requirements.

Fast availability, fast usability

Suitable for all standard applications, whether they involve individual components or any of over 400 ready-to-use combinations with the most frequently required compressed air preparation functions. Available to order direct from stock. Delivered fast and installed fast thanks to Festo plug and work®.

Economical thanks to focusing on the basics

Economical compressed air preparation for basic requirements with the polymer components DB. This range concentrates on the core functions of compressed air preparation. Ideal for applications requiring reduced functionality and reliable quality.

Combinable for enhanced compressed air preparation

The functions of the service units can be extended at any time thanks to the compatibility of the polymer components DB with the metal components of the D series.

- 1 Economical functionality: permissible primary pressure up to max. 10 bar.
- 2 Collective product range: filter regulator, pressure regulator and filter regulator/lubricator service unit.
- 3 Reliable in use: high-strength housing made of long-fibre polyamide with integrated connecting threads – simple to install and use.

Core functions of compressed air preparation: D series, polymer type

Easy to combine:

The polymer components DB and the metal components of the D series can be easily fitted together to form hybrid combinations.

Extendable functionality:

FRC-DB with on-off valve (left) and branching module (right) from the metal components of the D series.

Function

LR/LRS-...-D-...

LR/LRS-...-D-DI-MAXI

- - Flow rate
120 ... 12500 l/min
- - Temperature range
-10 ... +60 °C
- - Input pressure
1 ... 16 bar

Integrated universal locking for pressure regulators of D series which prevents alteration of the set secondary pressure (p2) by unauthorized persons. Universal locking means that multiple locks can be closed with the same key. A cylinder lock is integrated in the rotary knob.

- Also suitable for front panel mounting
- Two pressure gauge connections for different fitting options
- Mini and Midi sizes: Directly actuated diaphragm regulator
- Maxi size: Pilot actuated piston regulator, diaphragm regulator LRS-DI
- Good regulating characteristics with minimal pressure hysteresis
- High flow rate
- Two pressure regulation ranges: 0.5 ... 7 bar and 0.5 ... 12 bar
- Setting values are secured by locking the rotary knob
- Return flow option for venting from output 2 to input 1
- Pressure sensor (optional)
→ 3 / 1.8-15

Technical data

Function

- - Flow rate
1600 ... 3800 l/min
- - Temperature range
-10 ... +60 °C
- - Input pressure
1 ... 16 bar

The pressure regulator is suitable for manifold assemblies with through air supply on both sides, for configuring a regulator manifold with separate, independent pressure ranges. Pressure output is at the front or rear.

- Good control characteristics with low hysteresis and primary pressure compensation
- Manifold assembly with through air supply
- For configuring a regulator manifold with independent pressure ranges
- Two pressure regulation ranges: 0.5 ... 7 bar and 0.5 ... 12 bar
- Settings secured via detent on knob and push-in adjustment lock
- Directly actuated diaphragm regulator

Function

- - Flow rate
160 ... 9000 l/min

- - Temperature range
-10 ... +60 °C

- - Input pressure
1 ... 16 bar

The proportional lubricator adds a precision adjustable quantity of oil to the compressed air stream.

The pressure drop that occurs when air flows through a Venturi nozzle is used to convey oil from the container to the drip cap. From here, the oil drips into the air duct directly behind the proportional valve, where it is atomised. The oil mist component is proportional to the compressed air flow rate.

- Proportional lubricator with precision oil metering
- Reduces wear on drive units subject to high loading
- High flow rate
- Quick and easy oil top-up
- Robust metal housing
- Transparent lubricator bowl with metallic bowl guard

The following oils are recommended for Festo components:

Viscosity range to
ISO 3448, ISO class VG 32
32 mm²/s (= cSt) at 40 °C

- Festo special oil
→ 3 / 1.5-9
- ARAL Vitam GF 32
- BP Energol HLP 32
- Esso Nuto H 32
- Mobil DTE 24
- Shell Tellus Oil DO 32

Function

-  - Flow rate
300 ... 1,000 l/min

-  - Temperature range
+2 ... +50 °C

-  - Input pressure
3 ... 12.5 bar

Pressure dew point reduction:

LDM1-...-300/600: 20 K

LDM1-...-1000: 17 K

- Optimum final dryer with excellent operational reliability
- Suitable for use as an individual device or for integration in existing service unit combinations
- Flow rate-dependent dew point reduction

- Wear-free function requiring no external energy
- The composition of the compressed air remains almost unchanged due to the drying process
- 15% purge air flow rate with the LDM1-...-300/600 and 20% with the LDM1-...-1000

Typical areas of application:

- Drying, cleaning of precision parts
- Measuring technology
- Rinsing of precision glass scales
- Painting systems
- Paper and packaging machines

-  - Note

Prefiltration of the compressed air using a micro filter LFMA-D-MAXI, grade of filtration 0.01 µm (residual particles < 0.1 µm, residual oil content < 0.1 mg/m³) is vital for flawless functioning of the unit.
