Vacuum generators

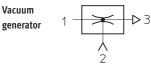

FESTO

- Simple, compact, robust design
- Quick and reliable setting down of parts via an ejector pulse from a pre-filled reservoir
- No wearing parts

Vacuum generators

Key features

Product overview

All Festo vacuum generators have a single-stage design and operate according to the venturi principle. The product families described below have been designed for a wide range of applications. The different performance classes of the individual product families make it possible to select vacuum generators tailored to suit specific requirements.

FESTO

Standard and inline ejectors VN-... → 6 / 1.1-10 • Nominal size • A range of extremely effective Low-cost 0.45 ... 3 mm generators suitable for use directly • No wearing parts • Max. vacuum in the workplace • Extremely fast evacuation time 93%

- Available as straight or T-shaped housing
- Low space requirement
- Vacuum switch (optional)

• Temperature range

0 ... +60 °C

- Nominal size 0.5 ... 1.5 mm
- Max. vacuum 80%
- Temperature range -20 ...+80 °C
- Range of vacuum generators with sturdy aluminium casing
- VAK-...: Built-in reservoir VAD-...: Connection for additional external reservoir
- Maintenance-free
- VAK-...: Reliable setting down of workpieces

6/1.1-32

Vacuum generators

Key features

FESTO

- Nominal size 0.7 ... 2 mm
- Max. vacuum 85%
- Temperature range 0 ... +40 °C
- Compact design
- Minimal installation work required
- Short response times
- Built-in solenoid valve (on/off)
- VAD-M-I-...: Additional built-in solenoid valve for ejector pulse
- Reliable setting down of workpieces

Vacuum generators VAD/VAK

Key features

FESTO

At a glance

- Vacuum generation via ejector principle
- Mounting holes in metal housing
- Connecting thread for the suction cup

Compressed air flowing from 1 to 3 generates a vacuum at port 2 in accordance with the ejector principle.

The low noise levels which occur during exhaust can be further reduced with a silencer at port 3.

Workpieces can be picked up in any position. When the compressed air is turned off, the suction process ends and the vacuum dissipates. During the suction process, the vacuum generator VAK fills a reservoir of approx. 32 cm³ with compressed

air, which creates an ejector pulse when the input pressure is switched off and reliably releases the workpiece from the suction cup. Max. switching frequency approx. 10 Hz at 6 bar and with approx. 1 m suction line.

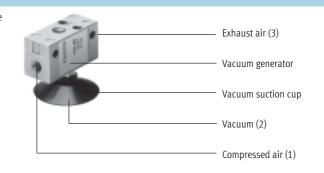

Vacuum generator VAD-... without ejector pulse

- Workpieces can be picked up in any position. • Sturdy and resistant to
- environmental factors
- Easy to install 1.1

Vacuum generators

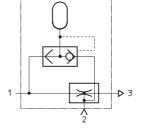

Pneumatic

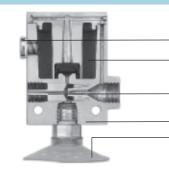

- No moving parts, maintenance-free • Connecting threads and mounting
 - holes available

Vacuum generator VAK-... with ejector pulse

- Quick and reliable setting down of parts via an ejector pulse from a pre-filled reservoir
- Robust vacuum generator for a broad field of applications
- Optional silencer

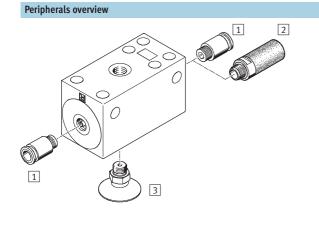

Connection for additional external reservoir Integrated reservoir for quick release of parts Vacuum generation based upon the "venturi principle" Aluminium housing Wide selection of suction cups and

complete suction grippers
