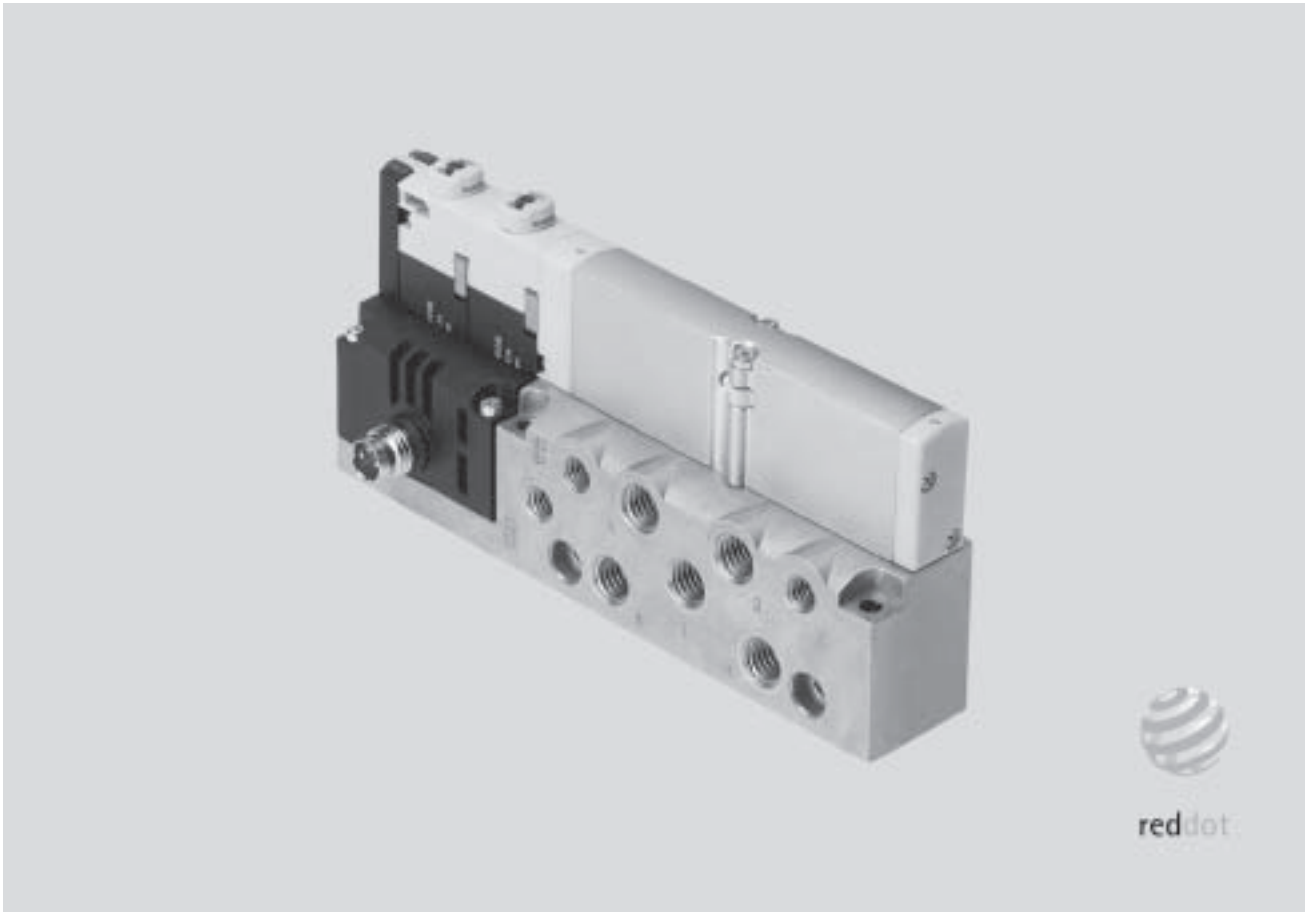
Solenoid valves VMPA1

- Straightforward valve replacement
- Flow rates of up to 360 l/min
- Also available as a modular multi-functional valve terminal for up to 64 valves

Solenoid valves VMPA1

Key features



Innovative

- Slim high-performance valves in sturdy metal housing, size MPA1 up to 360 l/min

The valves are identical with the valves in the valve terminal MPA. This simplifies planning, ordering and warehousing.

Flexible

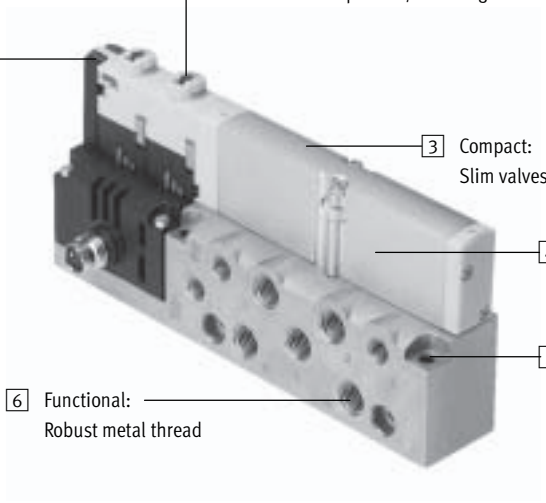
- High pressure range –0.9 ... 10 bar
- Wide range of valve functions

Reliable

- Sturdy and durable metal components
  - Valves
  - Sub-bases
  - Seals
- Fast troubleshooting thanks to LEDs on the valves and diagnosis via fieldbus
- High operating voltage tolerance ±25%
- Reliable servicing through replaceable valves and electronics modules
- Manual override either push-in, detenting or secured against unauthorised activation (covered)
- Durable thanks to the use of tried-and-tested piston spool valves
- Secure wall mounting

Solenoid valves VMPA1

Key features



Equipment options

Valve functions

- 5/2-way valve, single solenoid
- 5/2-way valve, double solenoid
- 2x 3/2-way valve, normally open
- 2x 3/2-way valve, normally closed
- 2x 3/2-way valve, 1x normally open, 1x normally closed
- 5/3-way valve, mid-position pressurised
- 5/3-way valve, mid-position closed
- 5/3-way valve, mid-position exhausted
- 2x 2/2-way valve, normally closed

Special features

- Electrical M8 connection, 4-pin with screw connection
- Detachable electronics module with integrated holding current reduction

Solenoid valves VMPA1

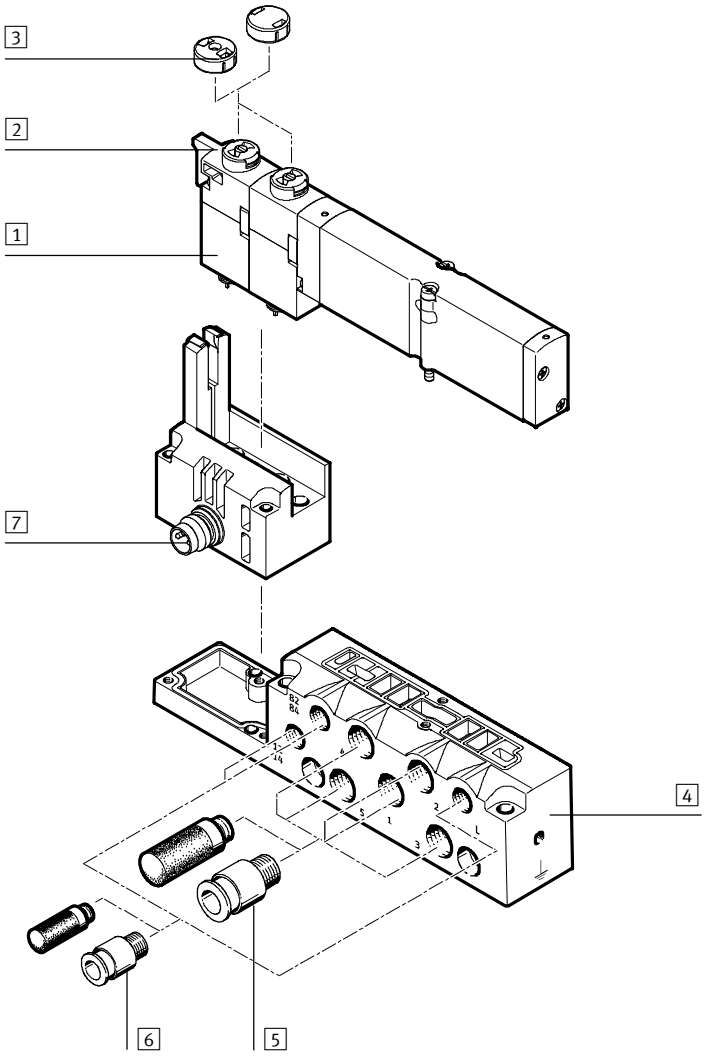
Peripherals overview

Individual sub-base

Ordering:
■ Using individual part numbers

Individual sub-bases can be equipped with any valve.

The electrical connection is established using a standard 4-pin M8 plug (VDMA 24 571).



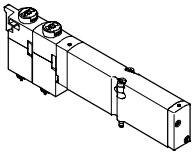
1 MPA valve
2 Manual override (per solenoid coil, push-in/rotary-detenting)
3 Cover for manual override (push-in, covered only)
4 Sub-base for individual valve
5 Threaded connectors and/or silencers M7 for working lines (2, 4) and supply air/exhaust ports (1, 3, 5)
6 Threaded connectors, silencers or blanking plugs M5 for auxiliary pilot air supply/exhaust ports (12/14, 82/84) and pressure compensation
7 Electrical connection M8, 4-pin

Solenoid valves VMPA1

Key features – Pneumatic components

FESTO

Sub-base valve



MPA offers a comprehensive range of valve functions. All valves are equipped with piston spool and patented sealing system which facilitates efficient sealing, a broad pressure range and long service life. To increase power they have a pneumatic pilot control supplied by auxiliary pilot air.

Sub-base valves can be quickly replaced since the pipe connection remains on the sub-base.
This design is also particularly slim.

Irrespective of the valve function there are sub-base valves with one solenoid coil (single solenoid) or with two solenoid coils (double solenoid).

Valve function

Code	Circuit symbol	Size 10	Description
M		■	5/2-way valve, single solenoid ■ Pneumatic spring return
J		■	5/2-way valve, double solenoid
N		■	2x 3/2-way valve, single solenoid ■ Normally open ■ Pneumatic spring return
K		■	2x 3/2-way valve, single solenoid ■ Normally closed ■ Pneumatic spring return
H		■	2x 3/2-way valve, single solenoid ■ Normal position 1x open 1x closed ■ Pneumatic spring return
B		■	5/3-way valve ■ Mid-position pressurised[1)] ■ Spring force return
G		■	5/3-way valve ■ Mid-position closed[1)] ■ Spring force return

1) Mid-position can be reached without electrical signal or using both signals

Solenoid valves VMPA1

Key features – Pneumatic components

FESTO

Valve function			
Code	Circuit symbol	Size 10	Description
E		■	5/3-way valve ■ Mid-position exhausted[1)] ■ Spring force return
D		■	2x 2/2-way valve ■ Normally closed ■ Pneumatic spring return

1) Mid-position can be reached without electrical signal or using both signals

Constructional design

Valve replacement

The valves are attached to the metal sub-base using two screws. This means that they can be easily replaced. The mechanical robustness of the sub-base guarantees good long-term tightness.

The valve code (M, J, N, K, B, G, E, D) is located on the front of the valve beneath the manual override.

Auxiliary pilot air

The port for the main pneumatic supply is located on the sub-base. The ports differ for the following auxiliary pilot air types:

- internal auxiliary pilot air and
- external auxiliary pilot air

Internal auxiliary pilot air

An internal auxiliary pilot air supply can be selected if the required working pressure is between 3 and 8 bar.

The auxiliary pilot air is then branched from the compressed air supply 1 at the sub-base using an internal connection. The port 12/14 is sealed at the factory.

External auxiliary pilot air

If the supply pressure is less than 3 bar or greater than 8 bar, you must operate your MPA valve using an external auxiliary pilot air supply. In this case the auxiliary pilot air is supplied externally via port 12/14 in the sub-base.

Note

If a slow pressure rise by means of a soft-start valve is required in the equipment, external auxiliary pilot air should be selected whereby the pilot pressure applied during switch-on is already very high.

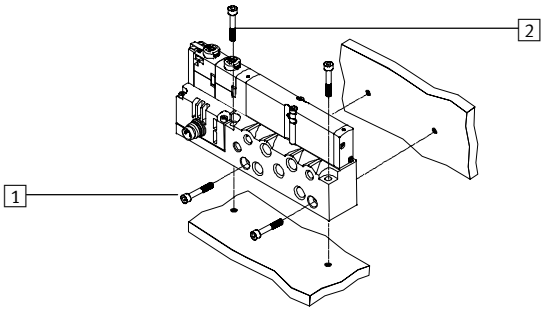
Sub-base variants				
Code		Size 10	Number of valve positions (solenoid coils)	Notes
–	Individual connection			
	 VMPA1-M1H-...-M7-PI	■	1 (max. 2)	■ With working lines M7 ■ With ports M7 for supply air (1, 3, 5) and M5 for auxiliary pilot and pilot exhaust air (12/14, 82/84)

Solenoid valves VMPA1

Key features – Assembly and operation

FESTO

Individual valve assembly



The individual sub-base is designed for wall mounting for integration into a system or machine. It can be mounted horizontally or vertically:

1 Horizontal mounting holes
2 Vertical mounting holes

Display and operation

Each valve solenoid coil is allocated an LED which indicates its switching status.

- Indicator 12 shows the switching status of the pilot control for output 2
- Indicator 14 shows the switching status of the pilot control for output 4

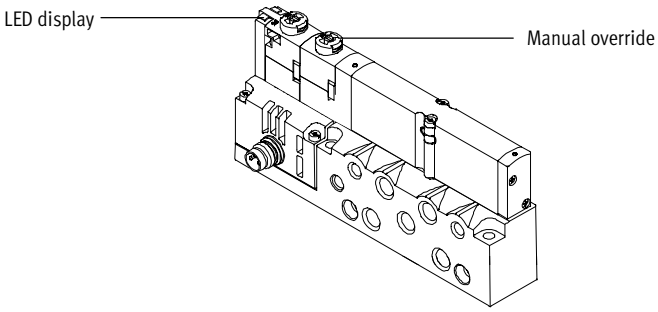
Manual override

The manual override (MO) allows the valve to be switched when in the electrically non-activated or de-energised status.

The valve is switched by pushing the manual override. The set switching status can also be locked by rotating the manual override (code: R).

Alternatives:

- A cover (code: N) can be fitted over the manual override to prevent it from being locked. The valve can then only be activated by pushing it.
- A cover (code: V) can be fitted over the manual override to prevent it from being activated accidentally.

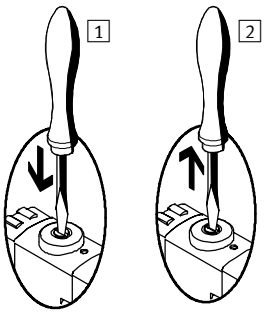


Note

A manually actuated valve (manual override) cannot be reset electrically. Conversely, an electrically actuated valve cannot be reset using the mechanical manual override.

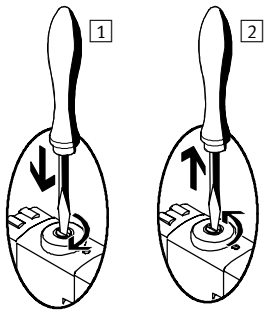
Manual override (MO)

Manual override with automatic return (push-in)



1 Press in the stem of the MO with a pointed object or screwdriver.
⇢ Valve is in switching position
2 Remove the pointed object or screwdriver.
Spring force pushes the stem of the MO back.
⇢ Valve returns to initial position (not with double solenoid valve code J)

Manual override with lock (detenting)



1 Press in the stem of the MO using a screwdriver until the valve switches and then turn the stem clockwise by 90° until the stop is reached.
⇢ Valve remains in switching position
2 Turn the stem anti-clockwise by 90° until the stop is reached and then remove the pin or screwdriver. Spring force pushes the stem of the MO back.
⇢ Valve returns to initial position (not with double solenoid valve code J)

Solenoid valves VMPA1

Key features – Electrical components

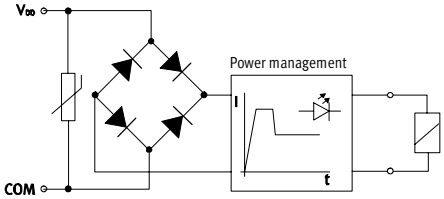
FESTO

Electrical power as a result of current reduction

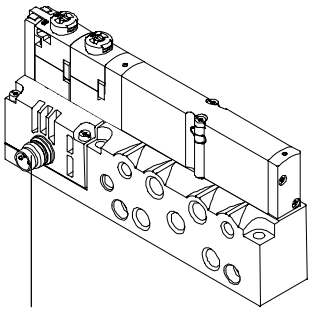
Each valve solenoid coil is protected with a spark arresting protective circuit as well as against polarity reversal.
All valve types are additionally equipped with an integrated current reduction, e.g. for fieldbus:

- Pull current: 60 mA
- Holding current after 20 ms: 25 mA

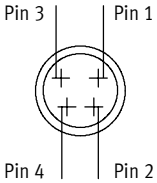
MPA valves are supplied with operating voltage in the range 18 ... 30 V (24 V +/–25%). This high tolerance is made possible through integrated control electronics and offers additional security, e.g. if the operating voltage drops.



Electrical connection



Connector plug M8 x 1, 4-pin to EN 60 947-5-2



Pin allocation on individual valve to VDMA 24 571

With positive logic:
Pin 1 – Not allocated
Pin 2 – U_B for coil 12
Pin 3 – 0 V for coils 12 and 14
Pin 4 – U_B for coil 14

With negative logic:
Pin 1 – Not allocated
Pin 2 – 0 V for coil 12
Pin 3 – U_B for coils 12 and 14
Pin 4 – 0 V for coil 14

Tightening torque for M8 plug
0.25 ... 0.5 Nm (manual torque)

Connecting cable

Designation	Version	Cable length [m]	Part No.	Type
Plug socket with cable	Straight socket	2.5	**158 960**	**SIM-M8-4GD-2,5-PU**
Plug socket with cable	Straight socket	5	**158 961**	**SIM-M8-4GD-5-PU**
Plug socket with cable	Angled socket	2.5	**158 962**	**SIM-M8-4WD-2,5-PU**
Plug socket with cable	Angled socket	5	**158 963**	**SIM-M8-4WD-5-PU**

Solenoid valves VMPA1

Instructions for use

FESTO

Pneumatic equipment

Operate your equipment with unlubricated compressed air if possible. Festo valves and cylinders are designed for operation under normal use without any additional lubrication, yet still have a long service life. The quality of compressed air downstream from the compressor must correspond to that of unlubricated compressed air. If possible, do not operate all of your equipment with lubricated compressed air. The lubricators should, where possible, always be installed directly upstream of the actuator used.

Incorrect additional oil and too high an oil content in the compressed air reduce the service life of the valve terminal.
Use Festo special oil OFSW-32 or the alternatives listed in the Festo catalogue (as specified in DIN 51 524-HLP32; basic oil viscosity 32 CST at 40 °C).

Bio-oils
When using bio-oils (oils which are based upon synthetic or native ester, e.g. rapeseed oil methyl ester), the maximum residual oil content of 0.1 mg/m^3 must not be exceeded (see ISO 8573-1 Class 2).

Mineral oils
When using mineral oils (e.g. HLP oils to DIN 51 524, parts 1 through 3) or similar oils based on poly-alpha-olefins (PAO), the maximum residual oil content of 5 mg/m^3 must not be exceeded (see ISO 8573-1 Class 4).
A higher residual oil content irrespective of the compressor oil cannot be permitted, as the basic lubricant would be flushed out over time.
