FESTO

Design

- With the CDC (Clean Design Compact) cylinder series, the ADN modular system has been expanded to include an easy to clean compact cylinder variant
- It is based on ISO 21287 for compact cylinders and, like the compact cylinder ADN, features short strokes and a compact design
- The compact cylinder CDC is designed as a double-acting pneumatic cylinder with piston, piston rod and profile barrel

Easy to clean

- Clean Design means smooth surfaces without slots and edges, which means fewer places where dirt can collect
- For hygiene reasons, the threads on the cylinder caps should be sealed with suitable blanking screws
- Resistant to conventional cleaning
- · Increased corrosion protection

Easy to assemble

- Comprehensive range of mounting accessories for just about every type of installation
- Contactless position sensing via proximity sensors

Versatile

- The variants can be configured according to individual needs thanks to the modular product system
- Greater flexibility thanks to the wide range of variants

Variants

CDC-...

- Ø 20, 25 mm
- Without position sensing

CDC-...-A...-R

- Ø 32 ... 80 mm
- With position sensing integrated in the end positions

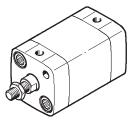

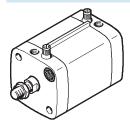

- Ø 32 ... 80 mm
- With sensor mounting rail for external position sensing

Note

A combination of integrated and external position sensing is possible.

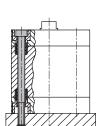

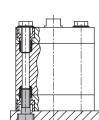

Mounting options

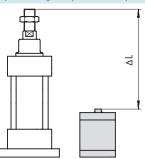

With through screws

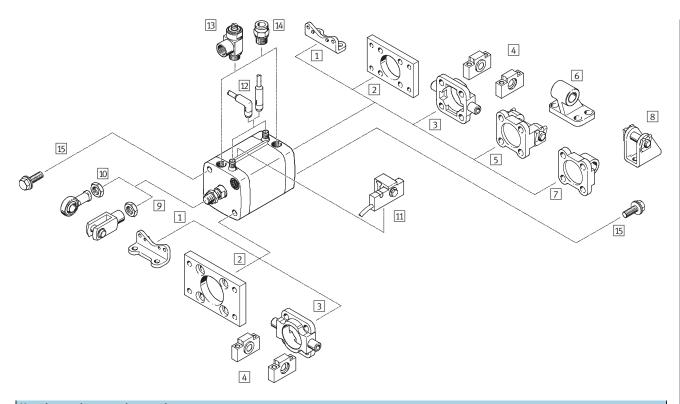

Space savings of up to 50% compared with cylinders to standard ISO 15552

positions	S6	0.1	0.15	0.2	0.35	0.5	0.65	0.9	

Permissible impact velocity:

$$v_{perm.} = \sqrt{\frac{2 \times E_{perm.}}{m_{dead} + m_{load}}}$$

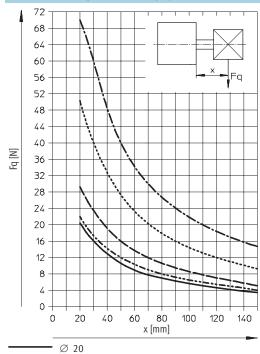

Maximum permissible load:

$$m_{load} = \frac{2 \times E_{perm.}}{v^2} - m_{load}$$

This data represents the maximum values that can be achieved. Values fluctuate in practice relative to the size of the effective load. Allowance

must also be made for the limits of the cushioning capacity of the drive and the permissible impact energy.

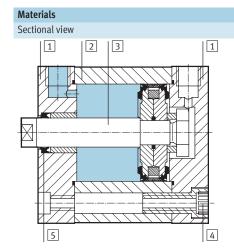

Max. lateral force Fq as a function of projection X

1) Corrosion resistance class 4 to Festo standard 940 070 Components requiring higher corrosion resistance. Parts used with aggressive media, e.g. food or chemical industry. These applications should be supported with special tests with the media if required

FESTO

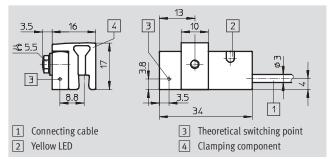

Accessories

Proximity sensor SMT-C1

Material:

Aluminium, high-alloy steel, stainless, polypropylene, polyurethane Free of copper, PTFE and silicone, halogen-free

Design							
Constructional design	Block-shaped						
Type of mounting	Clamped						
Connection direction	In-line						
Switching status display	Yellow LED						

Technical data – PNP, N/O contact		
Measuring principle		Inductive
Method of measurement		Absolute
Electrical connection		Cable, 3-wire
Cable length	[m]	5.0
Operating voltage range	[V DC]	10 30
Max. output current	[mA]	200
Max. switching capacity DC	[W]	6.0
Voltage drop	[V]	< 1.8
Residual current	[mA]	< 0.1
Switch-on time	[ms]	≤ 0.5
Switch-off time	[ms]	≤ 0.5
Hysteresis	[mm]	≤ 2.0
Protection against short circuit		Yes
Protection against polarity reversal		For all electrical connections
Inductive protective circuit		Adapted to MZ, MY, ME coils
Protection against overloading		Yes
Product weight	[g]	60
Protection class		IP65, IP67
Conforms to		DIN EN 60 947-5-2

Operating and environmental conditions										
Cable installation	Fixed	Flexible								
Ambient temperature [°C]	-20 +70	-20 +70								
Corrosion resistance class CRC ¹⁾	3									
CE mark (see declaration of conformity)	In accordance with EU EMC directive									

1) Corrosion resistance class 3 to Festo standard 940 070 Components requiring higher corrosion resistance. External visible parts in direct contact with industrial atmospheres or media such as solvents and cleaning agents, with a predominantly functional requirement for the surface
