

- Precise and rigid guide
- Freely programmable with respect to position, speed and acceleration
- High flexibility
- Motor controller SFC-DC:

# Mini slides SLTE, electric

Key features

## Range of applications

The electric mini slide SLTE is ideal for use in automation applications where controlled end-position cushioning (gentle stopping), constant travel speed and positioning capability are important factors.

The SLTE has the same interfaces on the yoke, slide and underneath the housing as the pneumatic SLT. It is also fully compatible with the modular handling and assembly system and SLT adapter kits.

## Special features

- Precise and rigid guide
- Freely positionable
- Fast positioning times
- Through-holes from above and below
- Sensors can be integrated
- Gentle starting and stopping
- Working loads up to 4 kg
- Constant travel speeds of 2 ... 200 mm/s

## Everything from a single source

Motor controller  
SFC-DC  
→ 1 / 6.1-59

Mini slide  
SLTE  
→ 1 / 6.1-49

The mini slide SLTE and motor controller SFC form one unit.

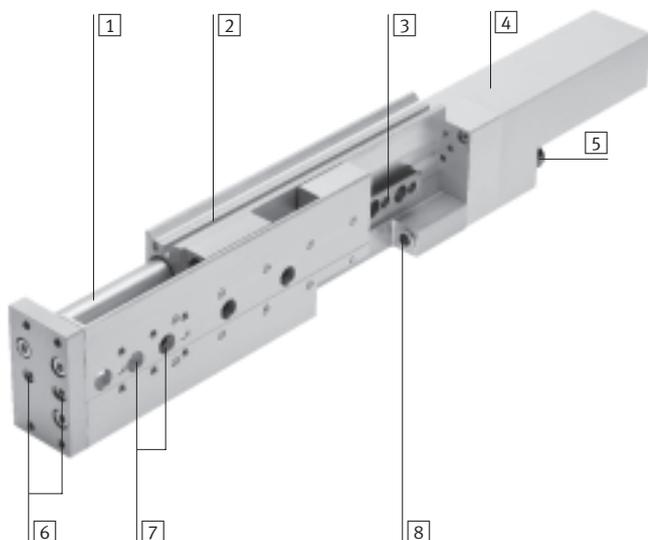

- Thanks to the protection class IP54, the SFC can be mounted close to the SLTE, either:
  - with centre supports
  - on an H-rail
- Only one cable required between SLTE and SFC
- Motor controller SFC available with or without control panel
- Easy control with
  - I/O interface
  - Profibus
  - CANopen

Parameterisation possible via

- Control panel:
  - Suitable for simple position sequences
- Configuration package FCT (Festo configuration tool):
  - Parameterisation via RS 232 interface
  - Windows-based PC user interface (Festo configuration tool)

## The technology in detail

- 1 Drive rod
- 2 Slot for reference switch
- 3 Roller bearing guide
- 4 Drive assembly consisting of DC motor with displacement encoder
- 5 Electrical connection
- 6 Threaded holes and through-holes with centring hole for attaching the working load
- 7 Threaded holes and through-holes with centring hole for attaching the SLTE
- 8 Fixed stop with integrated rubber buffer

## FCT software – Festo Configuration Tool

Software platform for electrical drives from Festo

- All the drives in a system can be managed and archived in a common project
- Project and data management for all supported device types
- Simple to use thanks to graphically supported parameter entry
- Universal mode of operation for all drives
- Working offline at your desk or online at the machine

## 6.1

### Mechanical reference positions and limit positions

- Reference positions can be either edited or taught in
- Flexible adaptation to installation conditions
- Settings are displayed clearly

### Position set table

- 31 position sets ensure flexibility in positioning
- Absolute or relative positioning values can be used
- The following parameters can be set flexibly for each application:
  - Position
  - Speed
  - Acceleration
  - Braking ramps
- Complete function test

# Mini slides SLTE, electric

Key features

## FHPP – Festo handling and positioning profile

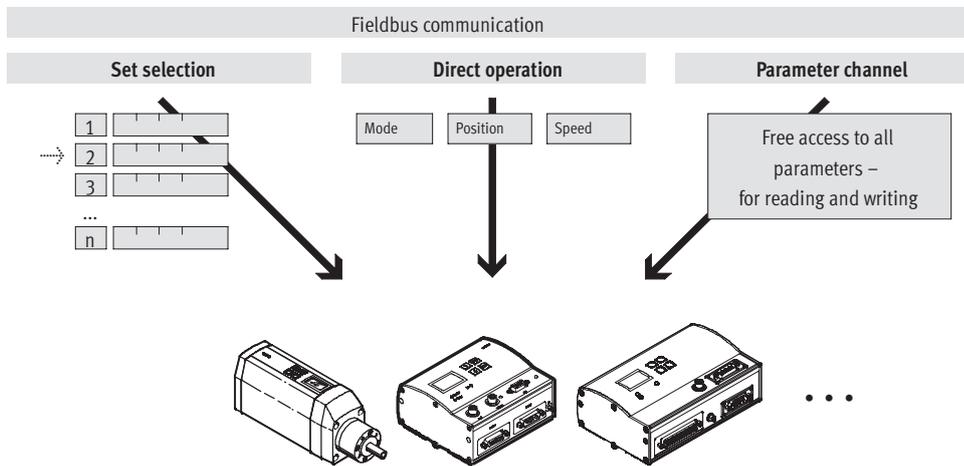

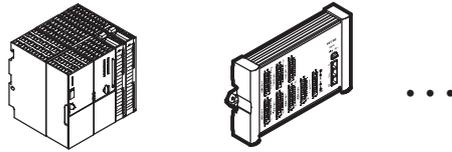

### Optimised data profile

Festo has developed an optimised data profile, the “Festo handling and positioning profile (FHPP)”, that is tailored to the target applications for handling and positioning tasks.

The FHPP data profile permits the activation of Festo motor controllers, using a fieldbus interface, via standardised control and status bytes.

The following are defined, among others:

- Operating modes
- I/O data structure
- Parameter objects
- Sequence control

## Dynamic characteristic load values

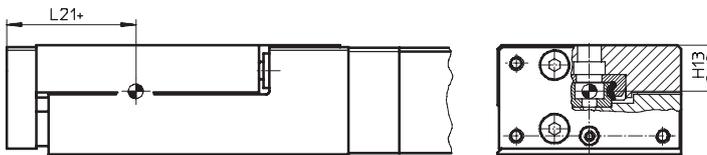

Torques are indicated with reference to the centre of the guide. They must not be exceeded in the dynamic range. Special attention must be paid to the cushioning phase.

If the drive is subjected to more than two of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

$$\frac{|F_{y1}|}{F_{y_{max}}} + \frac{|F_{z1}|}{F_{z_{max}}} + \frac{|M_{x1}|}{M_{x_{max}}} + \frac{|M_{y1}|}{M_{y_{max}}} + \frac{|M_{z1}|}{M_{z_{max}}} \leq 1$$

## Calculation example

<b>Given:</b>		<b>To be found:</b>
	<p>Mini slide = SLTE-10                  Stroke length = 80 mm                  Lever arm <math>L_x</math> = 50 mm                  Lever arm <math>L_y</math> = 30 mm                  Weight <math>F_z</math> = 0.8 kg                  Acceleration <math>a</math> = 0 m/s<sup>2</sup></p>	<p><math>F_y, F_z, M_x, M_y, M_z</math>                  and verification of function with                  combined load</p>

## Solution:

$L_{21} = 41$  mm from table

$F_y = 0$  N

$F_z = m \times g$   
 $= 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 = 7.848$  N

$M_x = m \times g \times L_y$   
 $= 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 \times 30 \text{ mm} = 0.236$  Nm

$M_y = m \times g \times [(L_{21} + \text{stroke}) - L_x]$   
 $= 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 [(41 \text{ mm} + 80 \text{ mm}) - 50 \text{ mm}] = 0.557$  Nm

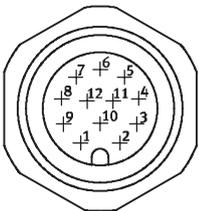

$M_z = 0$  Nm

Combined load:

$$\frac{|F_y|}{F_{y_{\max}}} + \frac{|F_z|}{F_{z_{\max}}} + \frac{|M_x|}{M_{x_{\max}}} + \frac{|M_y|}{M_{y_{\max}}} + \frac{|M_z|}{M_{z_{\max}}}$$

$$= 0 + \frac{7.848\text{N}}{410\text{N}} + \frac{0.2366\text{Nm}}{4.3\text{Nm}} + \frac{0.557\text{Nm}}{1.5\text{Nm}} + 0 = 0.445 \leq 1$$
