

Parallel grippers HGP

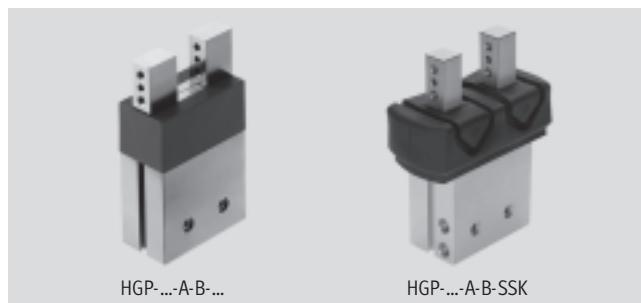

FESTO

Parallel grippers HGP

Key features

FESTO

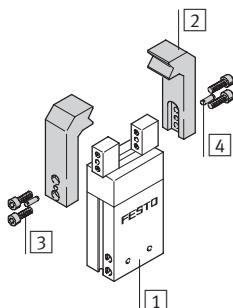

At a glance

- Double-acting piston drive
- Self-centring
- Variable gripping action:
 - External/internal gripping
- Versatility thanks to externally adaptable gripper fingers
- Wide range of options for mounting on drive units
- High gripping force and compact size
- Max. repetition accuracy
- Gripping force retention
- Internal fixed flow control
- With protective dust cap for use in dusty environments (protection class IP54)
- Sensor technology:
 - Adaptable proximity sensors on the small grippers
 - Integral proximity sensors for medium and large grippers

- Note
Sizing software
Gripper selection

Mounting options for external gripper fingers (customer-specific)

- [1] Parallel gripper
- [2] External gripper fingers
- [3] Mounting screws
- [4] Centring pins

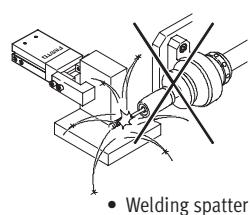

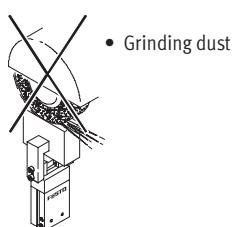

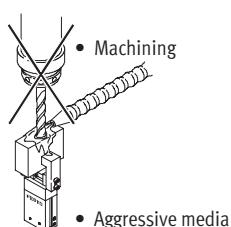

With protective dust cap

The sizes 16 and 25 can be adapted for use in dusty environments. They fulfil the requirements for protection class IP54.

The technical data corresponds to the data for parallel gripper HGP without protective dust cap.

- Note
Grippers should always be used with exhaust air flow control. They are not suitable for the following, or for similar applications:

Characteristic load values per gripper jaw

The indicated permissible forces and torques apply to a single gripper jaw. The indicated values include the lever arm, additional applied loads caused

by the workpiece or external gripper fingers, as well as forces which occur during movement.

The zero co-ordinate line (gripper jaw) must be taken into consideration for the calculation of torques.

Technical data

FESTO

Spring force F_{Spring} as a function of the gripper size and overall stroke length l

Gripper retention force, opening:
the spring forces F_{Spring} of the parallel gripper HGP-...-G1 can be determined from the following graphs.

Gripper retention force, closing:
the spring forces F_{Spring} of the parallel gripper HGP-...-G2 can be determined from the following graphs.

Determination of actual gripping forces for parallel grippers HGP-...-G1 and HGP-...-G2 depending upon the application

The parallel grippers with integrated spring can be used as:

- single-acting grippers
- grippers with supplementary gripping force and
- grippers with gripping force retention

In order to calculate available gripping forces F_{Gr} (per gripper jaw), the gripping force F_{Grip} and spring

force (F_{Spring}) must be combined accordingly.

Application

	Single-acting	Supplementary gripping force	Gripping force retention
The resulting gripping force F_{Gr} , conditional on the application, depends on the gripping action (external/internal gripping) and the gripper design (with/without spring return). The spring force is supplemented in accordance with the design and gripping action.	<ul style="list-style-type: none"> • Gripping with spring force: $F_{\text{Gr}} = F_{\text{Spring}}$ • Gripping with pressure force: $F_{\text{Gr}} = F_{\text{Grip}} - F_{\text{Spring}}$ 	<ul style="list-style-type: none"> • Gripping with pressure and spring force: $F_{\text{Gr}} = F_{\text{Grip}} + F_{\text{Spring}}$ 	<ul style="list-style-type: none"> • Gripping with spring force: $F_{\text{Gr}} = F_{\text{Spring}}$

FESTO

Technical data

Gripping force F_{Grip} per gripper jaw at 6 bar as a function of lever arm x and eccentricity y

External and internal gripping (closing and opening)

Gripping forces can be determined with the following diagrams for the various sizes at 6 bar in relation to

eccentric application of force (distance from the zero co-ordinate line shown opposite to the pressure point at

which the fingers grip the workpiece) and the maximum permissible off-centre point at which force is applied.

Calculation example

Given:

HGP-16-A-B

Lever arm $x = 20$ mm

Eccentricity $y = 22$ mm

To be found:

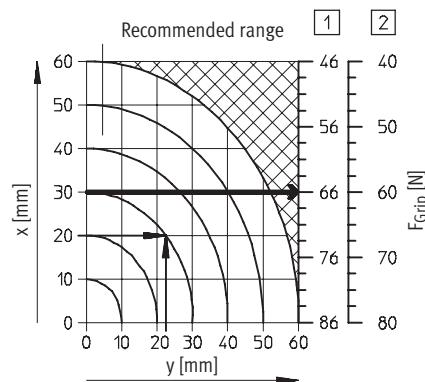

Gripping force at 6 bar

Procedure:

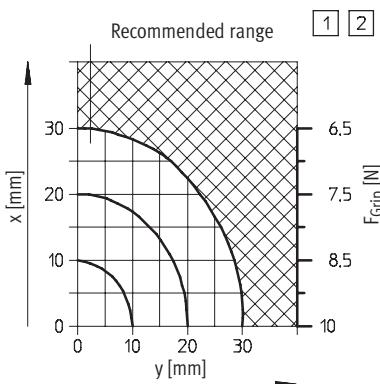

- Determine the intersection xy between lever arm x and eccentricity y in the graph for HGP-16-A-B
- Draw an arc (with centre at origin) through intersection xy
- Determine the intersection between the arc and the X axis
- Read the gripping force

Result:

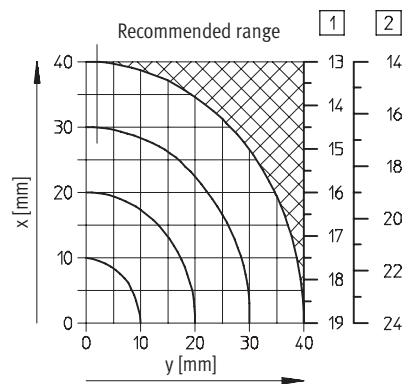

Gripping force = approx. 66 N
