

Solenoid valves VUVB/valve terminals type 24 VTUB

# Solenoid valves VUVB/valve terminals type 24 VTUB

Key features

FESTO

## Innovative

- Valve terminal for a wide range of pneumatic applications
- Universal from the individual valve up to the multi-pin plug
- Enormous flexibility during planning, assembly and operational use
- Selectable valve functions; 3/2- and 4/2-way function also suitable for vacuum applications
- Wide selection of optimally tailored accessories for flow rates from 200 to 1,000 l/min

## Flexible

- Room for expansion with 2 ... 12 valve positions on one valve terminal
- Use of individual valves in combination with an individual sub-base
- The flexibility of the pneumatic working ports provides a practical solution to different requirements
- Two pressure zones (others on request)
- High pressure range -0.9 ... 8 bar
- Extensive operating voltage range from 12 V DC to 230 V AC

## Reliable

- Manual override facility
- Durable thanks to the use of tried-and-tested piston spool valves
- Sturdy thanks to the polymer housing and metal manifold rail
- Fast troubleshooting thanks to an LED signal status display in the plug socket with cable or on the valve in the case of the design with multi-pin plug

## Easy to mount

- Ready-to-install unit, already assembled and tested
- Minimised expenditure with regard to ordering, installation and commissioning
- Secure wall mounting or H-rail mounting

# Solenoid valves VUVB/valve terminals type 24 VTUB

Key features

## Equipment options

### Valve functions

- 3/2-way valve, normally open
- 3/2-way valve, normally closed
- 4/2-way valve, single solenoid
- 4/2-way valve, double solenoid

### Electrical connection options

#### Individual connection/individual valve connection

- 2 ... 12 valve positions with manifold rail
- Via plug socket with cable with either LED or illuminating seal

#### Multi-pin plug

- 4 ... 12 valve positions/  
max. 24 solenoid coils
- Sub-D

## Valve terminal configurator

Download CAD data → [www.festo.com](http://www.festo.com)

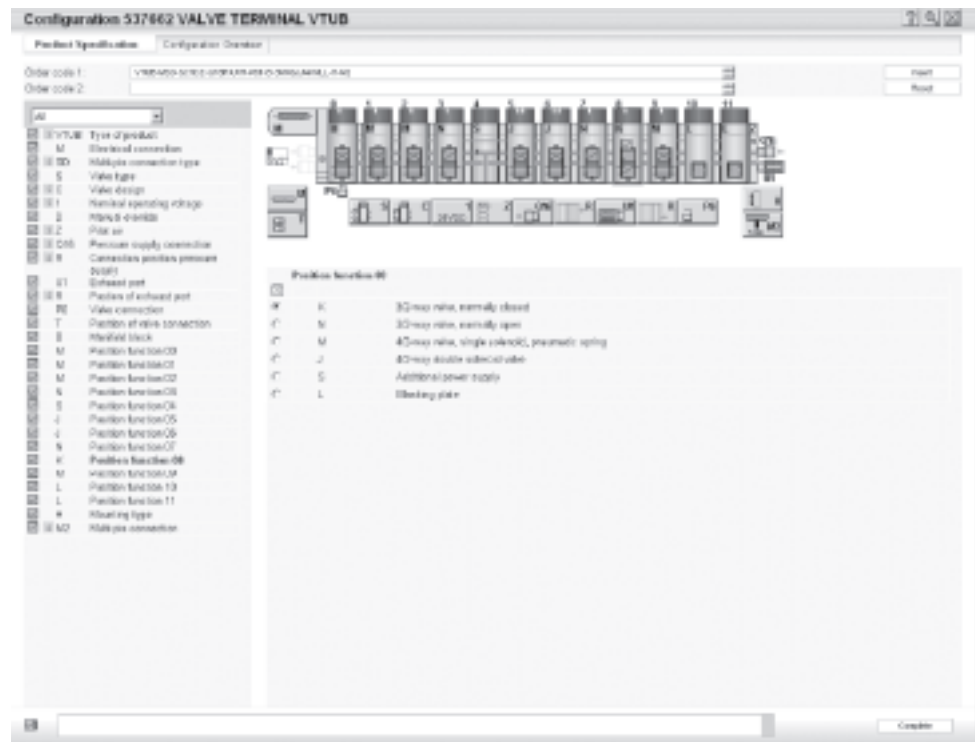

A valve terminal configurator is available to help you select a suitable valve terminal VTUB. This makes it much easier for you to find the right product.

Valve terminals type 24 VTUB are ordered via an ident. code.

All valve terminals are supplied fully assembled and individually tested. This reduces the amount of assembly and installation required to a minimum.

Ordering system for valve terminal type 24 VTUB

- Individual electrical connection
  - Electrical multi-pin connection
- Internet: vtub

The illustration above provides an example of a valve terminal configuration. The following steps explain how you arrive at the order code:

Once you have called up → [www.festo.com](http://www.festo.com), select the online version of the digital product catalogue from the “Products” submenu. Activate the “Direct Search” menu.

Here you can specify a “Part No.” (e.g. 537 662), the “Type” (e.g. VTUB) or “Article name” (e.g. valve terminal) to find your “Search result”. Click on the blue shopping basket to complete the selected product according to your specifications (this does not initiate an order). You will then be prompted to configure the product.

Select “Configurator”. You can then configure the valve terminal step by step (from the top down) according to your requirements. Confirm your configuration with “Finish” to continue on with the ordering process.

# Solenoid valves VUVB/valve terminals type 24 VTUB

Key features

## Pilot air supply module

The pilot air supply module is included in the scope of delivery of the manifold rail.

The pilot air supply module for internal or external pilot air supply ensures even greater flexibility.

## Manifold rail

The manifold rail features a groove into which the semi in-line valves are latched and secured with just one screw.

The valve functions 4/2-way single solenoid, 4/2-way double solenoid, 3/2-way normally closed and 3/2-way normally open are available. All semi in-line valves can be supplied with cartridges QSP for tubing

diameters 4, 6, 8 and 10. 4/2-way valves are also supplied without cartridges, allowing the user to fit cartridges of their choice or blanking plugs.

## Pressure zone supply module

The pressure zone supply module occupies one valve position and can be used as an additional supply or for supplying a pressure zone.

## Individual valve

The individual valve can be ordered as an in-line valve (comprising semi in-line valve and sub-base ready assembled) in all functions. Tubing

diameters 6 and 8 can be selected here. The in-line valve, however, can also be assembled from the individual parts

sub-base and semi in-line valve. All tubing diameters and the variant without cartridge are available in this case.

## Blanking plate

Plate without valve function for reserving valve positions on a valve terminal.

Valves and blanking plates are attached to the manifold rail using a screw.

## Sub-base

Individual sub-bases can be equipped with any valve.

Electrical connection is by means of a standardised connector plug, square design to EN 175301-803, type C.

Prefabricated plug sockets with cable or plugs for self-assembly are offered for this.

# Solenoid valves VUVB/valve terminals type 24 VTUB

Key features – Pneumatic components

FESTO

## Pneumatic connection

### Supply and exhaust

The valves are supplied pneumatically via manifold rails or individual sub-bases.

The manifold rails contain common lines for compressed air supply, exhaust and pilot exhaust for all valves.

The common lines can be connected

- at the left (code L)
- at the right (code R) or
- at both ends (no code)

## Pilot air supply

In-line valves are offered with internal and external pilot air. In the case of semi in-line valves, the installation position of the insert in the sub-base determines whether the valves will be actuated internally or externally.

### Internal pilot air supply

An internal pilot air supply can be selected if the supply pressure is between 2 and 8 bar. The pilot air is branched from channel 1 in the pressure zone supply module in this case.

If the selector is installed as shown in position **1**, it means that the pilot air supply will be branched internally from channel 1.

### External pilot air supply

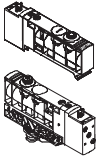

An external pilot air supply must be used if the supply pressure is between -0.9 and +2 bar. The pilot air is supplied via port 12/14 of the pressure zone supply module in this case.

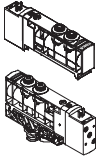

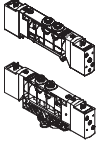

If the selector is turned 180° and installed as shown in position **2**, it means that the valve manifold is set to external pilot air supply.

Peripherals overview

## Overview – Solenoid valve VUVB

Individual position with individual electrical connection

These peripherals are ordered via individual parts/accessories.

The individual valve can be ordered as an in-line valve or as a fully assembled semi in-line valve on a sub-base.

The in-line valve is available with 6 or 8 mm plug connectors. The semi in-line valve on sub-base is available

with 4, 6, 8 or 10 mm plug connectors or as a variant without cartridge fitting.

## Overview – Solenoid valve VUVB

Manifold assembly/valve terminal with individual electrical connections

- “Individual connection type” code: ET  
Valve terminals with individual electrical connections are available in gradations from 2 to max. 12 valve positions.
- Valve positions can either be fitted with a valve or a blanking plate for future expansions.
- This gives a total maximum number of 24 controllable valve solenoid coils.

	Semi in-line valve [g]	150	150	220

Operating and environmental conditions	
Operating medium	Dried and filtered compressed air, lubricated or unlubricated, grade of filtration 40 µm, vacuum
Operating pressure [bar]	-0.9 ... +8
Operating pressure for valve terminal with internal pilot air supply [bar]	2 ... 8
Pilot pressure range [bar]	2 ... 8
Ambient temperature [°C]	-5 ... +50
Temperature of medium [°C]	-5 ... +50
Corrosion resistance class CRC	1 <sup>1)</sup>

1) Corrosion resistance class 1 to Festo standard 940 070  
Components requiring low corrosion resistance. Transport and storage protection. Parts that do not have primarily decorative surface requirements, e.g. in internal areas that are not visible or behind covers.

-  - Note  
For vacuum operation valves require a filter. This is to avoid that foreign matter is drawn into the valve (e.g. when using a suction cup).

Peripherals overview

## Overview – Valve terminal type 24 VTUB

Valve terminal with electrical multi-pin plug connection

- 25-pin Sub-D multi-pin plug connection  
Code: SD

Valve terminals with electrical multi-pin plug connection are available in gradations from 2 to max. 12 valve positions.

Each valve position can either be equipped with a valve or a blanking plate.

A maximum of 24 valve solenoid coils can be actuated via the electrical multi-pin plug connection.

# Valve terminals type 24 VTUB

15	Separator for pressure zones VABD	For mounting in the manifold rail 45

# Valve terminals type 24 VTUB

Key features

FESTO

## Individual connection

Connection is independent of the control technology used. There are two different valve types, in-line valves and semi in-line valves for manifold rails or individual sub-bases.

Between 2 ... 24 solenoid coils (divided between 2 ... 12 valve positions) can be selected with individual connection.

Valves can be used on individual sub-bases for actuators further away from the valve terminal.

With an individual electrical connection, the plug is connected directly to the valve. A number of plug sockets/ plug sockets with cable can be selected for the valve terminal and for the individual sub-base:

- KMEB-1-...-LED with signal status display
- KMEB-1-230AC-... can be used up to 230 V AC
- MSSD-EB for self-assembly
- KMEB-2-24-... with signal status display
- Illuminating seal MEB-LD for signal status display

## Multi-pin plug connection

Control signals from the controller to the valve terminal are transmitted via a pre-assembled multi-wire cable, which substantially reduces installation time.

This valve terminal can be fitted with 4 ... 12 valves.

Variants

- Sub-D connection

Double solenoid drive with multi-pin plug connection. The valve is equipped with an LED for displaying the signal status.

## Wide range of pneumatic components

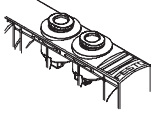

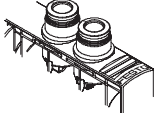

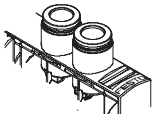

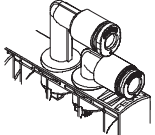

- The use of the same basic valves for both the individual valves and the valve manifold permits fast and flexible conversion and multiple use of parts.

- Flexible construction thanks to assembled and tested units or individual components as modules for individual configurations.

- Flow rates from 200 ... 1,000 l/min depending on the respective application through the selection of appropriate QS connections.

Key features – Pneumatic components

## Instructions for using pressure zones

The VTUB valve terminal can be operated with 2 pressure zones, supplied either from the left or from the right.

Pressure zones are created by means of separators that can be used in the following ducts:

- Supply duct 1 (code TP) and exhaust duct 3 (code TS) or
- Exhaust duct 3 (code TR)
- Supply duct 1

Duct separation	Code	Description
<p>1 Pressure zone 1 2 Pressure zone 2</p>	TP	Duct 1 closed
<p>1 Pressure zone 1 2 Pressure zone 2</p>	TS	Duct 1/3 closed
<p>1 Pressure zone 1 2 Pressure zone 2</p>	TR	Duct 3 closed

## Separator VABD-B6

- - Note

The separator can also be fitted subsequently using a screwdriver/ socket spanner.

# Valve terminals type 24 VTUB

Key features – Display and operation

## Inscription system

Inscription labels can be applied to the valves and manifold rails to identify them.

- Inscription labels for valve type IBS-9x17 Part No. 161 937
- Inscription labels for manifold rail type MH-BZ-80X Part No. 197 259

## Display and operation

Each solenoid coil can be allocated an LED which indicates its signal status. Suitable plug sockets with cable can be found on page 51. The multi-pin variant has the LED integrated in the valve.

The manual override (MO) allows the valve to be activated without electronic control or power supply.

The valve is activated by pushing the manual override. The set switching status can be secured by rotating the manual override.

 Note

A manually activated valve (manual override) cannot be reset electrically. Conversely, an electrically activated valve cannot be reset using the mechanical manual override.

- 1 Optional manual override (pushing and detenting via turning using a screwdriver)
- 2 LED signal status display per solenoid coil

# Valve terminals type 24 VTUB

Key features – Display and operation

## Manual override (MO)

### MO with automatic return (non-detenting)

Press in the stem of the MO with a pin or screwdriver.  
 → Valve is in switching position  
 Remove the pin or screwdriver.  
 Spring force pushes the stem of the MO back.  
 → Valve returns to normal position.

### MO with detent (turning with detent)<sup>1)</sup>

Press in the stem of the MO using a pin or screwdriver until the valve switches and then turn the stem clockwise by 90° until the stop is reached.  
 → Valve remains in switching position  
 Turn the stem anti-clockwise by 90° until the stop is reached and then remove the pin or screwdriver.  
 Spring force pushes the stem of the MO back.  
 → Valve returns to normal position.

1) Not with double solenoid valve code J for electrical multi-pin plug connection (double solenoid valve)

## Mounting – Valve terminal

Sturdy terminal assembly thanks to:

- Two through-holes for wall mounting
- Integrated attachment for H-rail mounting

### Wall mounting

The VTUB valve terminal is screwed onto the mounting surface using two M5 screws.

### H-rail mounting

The VTUB valve terminal is hooked onto the H-rail (see arrow A). The valve terminal VTUB is then swivelled on the H-rail and secured in place with the clamping component (see arrow B).

- 1 H-rail
- 2 Self-tapping M4x8 screw of the H-rail clamping unit
- 3 Clamping component of the H-rail clamping unit

For H-rail mounting of the valve terminal you will need the VAME-B6-T mounting kit. This permits mounting of the valve terminal on a H-rail to EN 60715.

Key features – Electrical components/instructions for use

FESTO

## Equipment

Operate your equipment with unlubricated compressed air if possible. Festo valves and cylinders are designed for operation under normal use without any additional lubrication, yet still have a long service life. The quality of compressed air downstream from the compressor must correspond to that of unlubricated compressed air. If possible, do not operate all of your equipment with lubricated compressed air. The lubricators should, where possible, always be installed directly upstream of the actuator used.

Incorrect additional oil and too high an oil content in the compressed air reduce the service life of the valve terminal.

Use Festo special oil OFSW-32 or the alternatives listed in the Festo catalogue (as specified in DIN 51524 HLP32; basic oil viscosity 32 CST at 40 °C).

### Bio-oils

When using bio-oils (oils which are based upon synthetic or native ester, e.g. rapeseed oil methyl ester), the maximum residual oil content of 0.1 mg/m<sup>3</sup> must not be exceeded (see ISO 8573-1 Class 2).

### Mineral oils

When using mineral oils (e.g. HLP oils to DIN 51524, parts 1 through 3) or similar oils based on poly-alpha-olefins (PAO), the maximum residual oil content of 5 mg/m<sup>3</sup> must not be exceeded (see ISO 8573-1 Class 4). A higher residual oil content irrespective of the compressor oil cannot be permitted, as the basic lubricant would be flushed out over time.

Technical data – Terminal valves

FESTO

-  Voltage  
24 V DC
-  Pressure  
-0.9 ... +8 bar
-  Temperature range  
-5 ... +50 °C

General technical data				
Valve function		3/2, single solenoid	4/2, single solenoid	4/2, double solenoid
Constructional design		Piston spool valve		
Sealing principle		Soft		
Type of actuation		Electrical		
Type of reset		Pneumatic spring		-
Type of control		Piloted		
Pilot air supply		Internal or external		
Direction of flow		Non-reversible		
Exhaust function		No flow control		
Manual override facility		Non-detenting, detenting		Non-detenting
Type of mounting		Via through-holes		
Installation position		Any		
Width	[mm]	20		
Nominal size	[mm]	7		
Pneumatic connections				
Supply connection	1	G $\frac{1}{2}$ (sub-base)		
Exhaust connection	3	G $\frac{1}{2}$ (sub-base)		
Working lines	2/4	QS-4, QS-6, QS-8, QS-10		
External pilot air connection	12/14	M5 (sub-base)		
Standard nominal flow rate	qnN	[l/min]	200 (QS-4), 500 (QS-6), 800 (QS-8), 1,000 (QS-10)	

Operating and environmental conditions			
Operating medium		Dried and filtered compressed air, lubricated or unlubricated, grade of filtration 40 $\mu$ m, vacuum	
Operating pressure	[bar]	-0.9 ... +8	
Operating pressure for valve terminal with internal pilot air supply	[bar]	2 ... +8	
Pilot pressure	[bar]	2 ... 8	
Ambient temperature	[°C]	-5 ... +50	
Temperature of medium	[°C]	-5 ... +50	
Storage temperature <sup>1)</sup>	[°C]	-20 ... +40	

1) Long-term storage

-  Note  
For vacuum operation valves require a filter. This is to avoid that foreign matter is drawn into the valve (e.g. when using a suction cup).

# Valve terminals type 24 VTUB

Technical data – Terminal valves

Electrical data				
Valve function		3/2, single solenoid	4/2, single solenoid	4/2, double solenoid
Electrical connection		Socket for multi-pin plug		
Nominal operating voltage	[V DC]	24		
Permissible voltage fluctuations		±10%		
Electrical power consumption	[W]	1.5	1.5	3.3 (following a current reduction 0.1)
Protection class to EN 60529		IP65		

Valve response times [ms]				
Valve function		3/2, single solenoid	4/2, single solenoid	4/2, double solenoid
On		20	20	–
Off		20	20	–
Changeover		–	–	20

### Pilot pressure p2 as a function of operating pressure p1

### Materials – Valves

Sectional view	Single solenoid	Double solenoid

1	Housing	Reinforced polyamide
2	Piston spool	Wrought aluminium alloy
–	Seals	Nitrile rubber, hydrogenated nitrile rubber, fluorocarbon rubber

Materials	
Manifold rail with multi-pin plug	Wrought aluminium alloy
Pressure zone supply module	Reinforced polyamide
Blanking plate for vacant position	Reinforced polyamide
