Control block CPX-CMXX

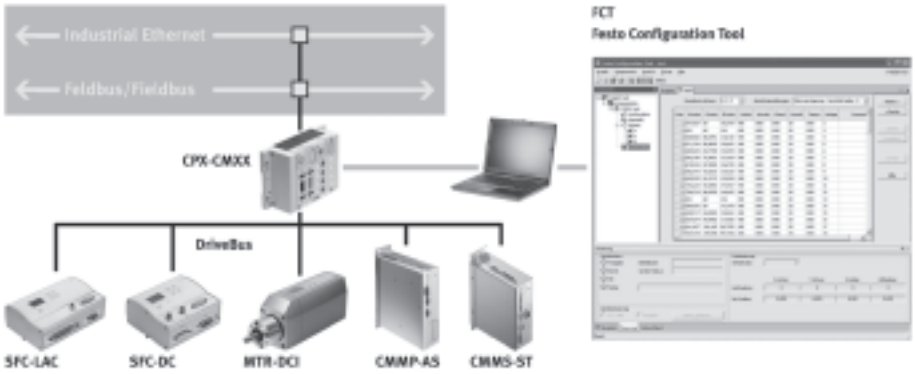
Key features

Co-ordinated movement of multiple electrical axes

The control block CPX-CMXX is an intelligent module in the CPX terminal for controlling electric drive units from Festo.
Both individual axis movements and co-ordinated movements can be controlled via CAN bus. Cartesian kinematic systems are supported.
With just a small number of control signals from a higher-order controller or a control unit in the CPX terminal, the control block co-ordinates the entire motion sequence.
Two axes groups with max. four axes per group can be controlled.



Advantages for users

Simple, yet efficient

CPX-CMXX provides a PLC-compatible interface for multi-dimensional axis control within the CPX system. This is achieved physically via various fieldbus nodes for easy adaptation to the general control technology.

Convenient

- The control block does not have to be programmed, but instead receives the sequence via parameterisation or teach-in.
- Easy application configuration with the Festo Configuration Tool (FCT).
- There are 1024 position sets available per axes group.
- Operating function in the FCT for commissioning without connection to the controller.
- Preliminary test of the application is possible without controller.

Flexible

Different operating modes guarantee universal use of the control block.

- Record Select mode: the user can simply select the record number of the position set and the control block takes care of the motion sequence.
- Direct mode: with the higher-order controller, position values, speed and acceleration are assigned to the individual axes and loaded in a selected position set. The position set is executed as in Record Select mode.

Optimised

Co-ordinated movement in conjunction with the CPX-CMXX means:

- Synchronous movement: the values for movement of the axes are calculated so that the axes reach their destination simultaneously.
- Linking: position sets can be executed in sequence without an additional start signal.

Technical data

FESTO

The control block CPX-CMXX is an intelligent module in the CPX terminal for controlling electric drive units. Individual axis and simple multi-axis applications can easily be implemented. Programming is not necessary. Configuration, parameterisation and commissioning of the application is easily achieved with the Festo Configuration Tool (FCT).

- Configuration of two axes groups with up to four axes each is possible
- There are 1024 position sets available per axes group
- Input or Teach-In of positions in specified set structure
- Parameterisation via Ethernet
- Communication protocol: FHPP-MAX, Festo handling and positioning profile for multi-axis movements.
- Control of drive units via CANopen
