Linear modules HME, electric

Key features

Range of application

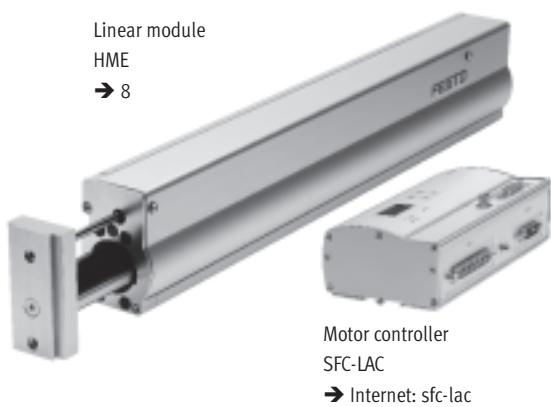

The electric linear module HME is ideal for use in automation applications where controlled end-position cushioning (gentle stopping), constant travel speed and positioning capability are important factors.

The linear module HME has the same interfaces on the yoke and basic profile as the pneumatic linear module HMP, and is fully compatible with modular handling and assembly systems including HMP adapter kits.

Special features

- With integrated linear motor
- Freely positionable
- Fast positioning times
- Extremely rigid basic profile
- Precision, backlash-free guidance
- Controlled starting and stopping (programmable ramp)
- Effective loads up to 25 kg
- No external magnetic fields
- Freely programmable travel speeds of up to 3 m/s
- High dynamic response and accuracy thanks to rotationally symmetrical linear motor
- No chain link trunking (fixed long coil system with short magnetic rotor, without moving power supply)

Everything from a single source

The linear module HME and motor controller SFC form one unit.

- Thanks to IP54 protection, the SFC can be mounted close to the HME, either:
 - via centre supports
 - via H-rail
- Only one cable is required between the linear module HME and motor controller SFC
- The motor controller SFC is available with or without control panel
- Up to 31 position sets

Parameter assignment via:

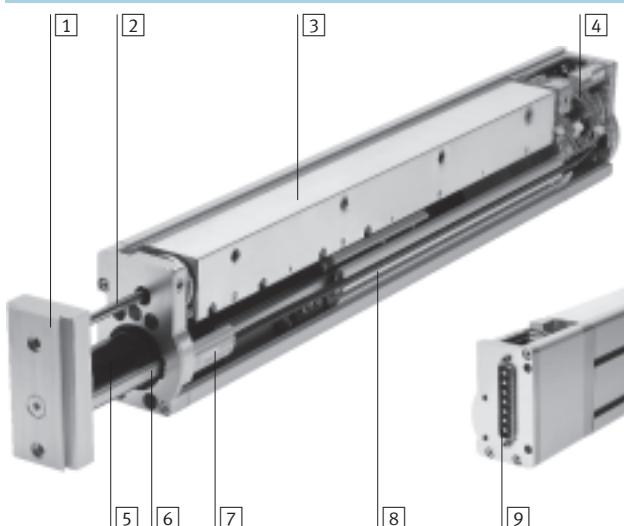

- FCT (Festo Configuration Tool) configuration package:
 - with RS 232 interface
 - Windows-based PC user interface, Festo Configuration Tool
- Easy actuation via:
 - I/O interface
 - Profibus
 - CANopen, "Interpolated position mode" included
 - DeviceNet

Dynamic characteristic load values of the bearing guide

The stated forces and torques are for a horizontal and vertical mounting position (see illustration). In many cases the maximum loads occur on braking and with extended axis.

The calculated loads must be used in the following equation. The equation must be satisfied statically and dynamically, in any operating situation. The effective direction of the torques and forces must be observed. The torques and force directions shown are positive.

$$\frac{| -0.5 * F_y + 0.5 * \sqrt{3} * F_z |}{F_{u\max.}} + \frac{| 0.5 * \sqrt{3} * F_y + 0.5 * F_z |}{F_{v\max.}} + \frac{| M_x |}{M_{x\max.}} + \frac{| -0.5 * M_y + 0.5 * \sqrt{3} * M_z |}{M_{u\max.}} + \frac{| 0.5 * \sqrt{3} * M_y + 0.5 * M_z |}{M_{v\max.}} \leq 1$$

1 Loads resulting from the application: forces F_y , F_z and torques M_x , M_y , M_z

The forces and torques to be used in the above equation, caused by the load of the application, comprise the following:

Composition of forces:

$$F_y = F_{y5}$$

$$F_z = F_{z2} + F_{z3} + F_{z5}$$

Composition of torques:

$$M_x = M_{x3} + M_{x5}$$

$$M_y = M_{y1} + M_{y2} + M_{y3} + M_{y4} + M_{y5}$$

$$M_z = M_{z1} + M_{z4} + M_{z5}$$

1.1 Torques acting on the bearing guide due to maximum feed force

The stated values are maximum values resulting from the peak feed force.

They are independent of:

- stroke position

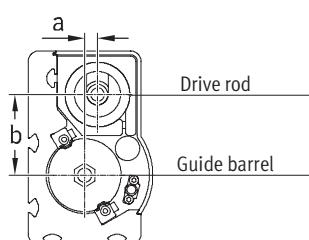

- inertia

and dependent on:

- direction of movement

- mounting position

	Extending – Accelerating / Retracting – Braking		Retracting – Accelerating / Extending – Braking	
	My1 [Nm]	Mz1 [Nm]	My1 [Nm]	Mz1 [Nm]
HME-16-100	9.2	-1.3	-9.2	1.3
HME-16-200/-320	6.7	-1	-6.7	1
HME-25	13	-2.1	-13	2.1

Dimensions	a [mm]	b [mm]
HME-16	5.4	37.2
HME-25	8	50.2

1.2 Forces and torques acting on the bearing guide due to dead weight

The stated values are maximum values in the extended condition.

They are independent of:

- inertia of the dead weight

and dependent on:

- stroke position

- mounting position

	My2 [Nm]	Fz2 [N]
HME-16-100	0.6	-9.8
HME-16-200	1.4	-12.5
HME-16-320	2.7	-15.7
HME-25-100	1.3	-22.1
HME-25-200	3.0	-26.9
HME-25-320	5.6	-32.7
HME-25-400	7.7	-36.6

Linear modules HME, electric

FESTO

Technical data

1.3 Forces and torques acting on the bearing guide due to the weight of the effective load

Values to be determined:

Formulae for calculating forces and torques:

Distances:

- X2, Y2 and Z2

Forces and torques due to weight:

- Fz3

- Mx3, My3

Due to inertia:

- My4, Mz4

$$Fz3 = m \times g$$

$$Mz3 = 0$$

m = Mass of effective load

a = Acceleration

g = Acceleration due to gravity
(9.81 m/s²)

$$Fy3 = 0$$

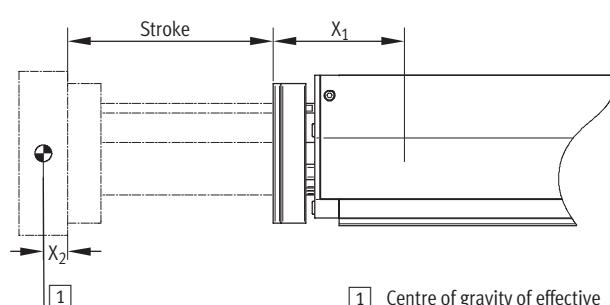

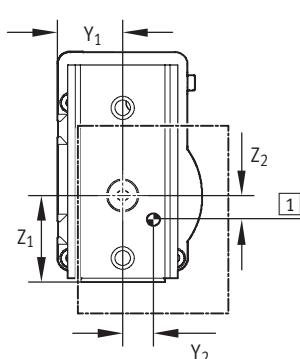

$$Mx4 = 0$$

$$Mx3 = Y2 \times Fz3$$

$$My4 = Z2 \times m \times a$$

$$My3 = (X1 + \text{stroke} + X2) \times Fz3$$

$$Mz4 = Y2 \times m \times a$$

1 Centre of gravity of effective load

	Y1 [mm]	Z1 [mm]
HME-16	26	34.5
HME-25	35	43

	X1 [mm]
HME-16	119.3
HME-25	154

1.4 Forces and torques acting on the bearing guide due to forces from the application (other drives)

For example:

Fy5 = Mounting force acts at right angles to effective load

- Mounting forces

- Forces from attached rotary drives

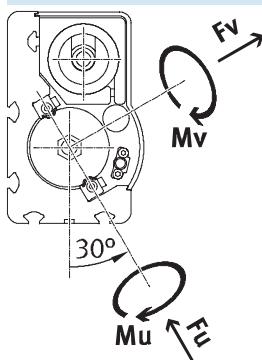

Fz5 = Mounting force presses additionally on effective load

Mx5 = Attached rotary drive causes torque on the bearing guide

My5 = Torques due to Fz5

Mz5 = Torques due to Fy5

2 Maximum permitted load capacity of bearing guide¹⁾

Size	16	25
Fu _{max.} [N]	2,456	2,456
Fv _{max.} [N]		
Mx _{max.} [Nm]	42	60
Mu _{max.} [Nm]	123	220
Mv _{max.} [Nm]	123	220
