## Guided drives DFME-LAS, electric

Key features

**FESTO**

### At a glance

#### Characteristics

- The guided drive consists of a freely positionable linear motor, integrated displacement encoder with magnetic strip and reference switch
- Enables positioning with very high dynamic response. Accelerations of up to  $80 \text{ m/s}^2$  are possible without load
- Mechanical interfaces are largely compatible with the guided drive DFM-B

- Together with the motor controller SFC-LACI and the associated cables, it is a quickly commissioned positioning system for small loads

#### Range of applications

- Positioning of small loads such as:
  - placing small parts into and removing small parts from magazines,
  - sorting parts quickly,
  - for equipping and assembly processes

### Everything from a single source

Guided drive

Motor controller  
SFC-LACI  
→ Internet: sfc-laci

The guided drive DFME-LAS and motor controller SFC-LACI form one unit.

- Thanks to protection class IP54, the SFC can be mounted close to the DFME, either:
  - via central supports or
  - via H-rail
- Just two cables are required between the guided drive DFME and motor controller SFC (motor and encoder cable)
- The motor controller SFC is available with or without control panel
- Up to 31 positioning records

Parameterisation via:

- Control panel:
  - suitable for simple position sequences

Parameterisation via:

- FCT (Festo Configuration Tool) configuration package:
  - via RS 232 interface
  - Windows-based PC user interface, Festo Configuration Tool
- Easy actuation via:
  - I/O interface
  - Profibus
  - CANopen, incl. "interpolated position mode"
  - DeviceNet

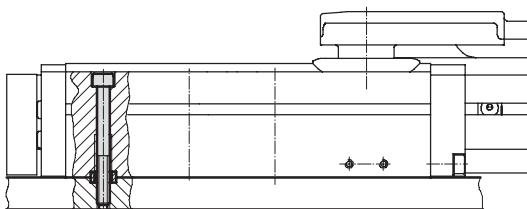

**CANopen**

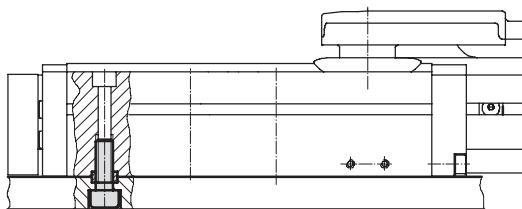

*DeviceNet*

## Note

All values are based on a standard temperature of 23 °C.  
Dynamic response and accuracy are dependent on the mounting (rigidity) and temperature stresses (heat concentration).

### Dynamic characteristic load values

Torques are indicated with reference to the centre of the yoke plate.

These values must not be exceeded during dynamic operation.

Special attention must be paid to the cushioning phase.

If the drive is simultaneously subjected to several of the indicated forces and torques, the following equation must be satisfied in addition to the indicated maximum loads:

$$\frac{|F_y|}{F_{y\max.}} + \frac{|F_z|}{F_{z\max.}} + \frac{|M_x|}{M_{x\max.}} + \frac{|M_y|}{M_{y\max.}} + \frac{|M_z|}{M_{z\max.}} \leq 1$$
