					With female thread	With male thread	
Double-acting		**ADNM** Single-ended piston rod	25	1 ... 1,000	■	■	4
			40, 63, 100	1 ... 2,000	■	■	

Function principle

By connecting 2 to 5 cylinders in series with the same piston ∅ and different stroke lengths, up to 6 positions can be approached.

The following rules must be observed:

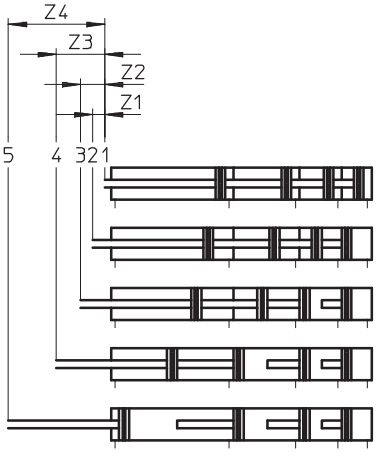
1 Each subsequent cylinder stroke must be greater than the one that preceded it.

2 The sum of all individual strokes may not exceed the total stroke, i.e.
for piston ∅ 25: 500 mm
for piston ∅ 40, 63, 100: 2,000 mm

3 The stroke of the last cylinder must not exceed a maximum permitted stroke length, i.e.
for piston ∅ 25: 300 mm
for piston ∅ 40, 63, 100: 1,000 mm

4 The strokes of the individual cylinders must not exceed in each case a maximum permitted stroke length, i.e.
for piston ∅ 25: 200 mm
for piston ∅ 40, 63: 300 mm
for piston ∅ 100: 400 mm

Example for piston ∅ 25 mm:
ADNM-25 for 5 positions at 0, 25, 50, 100 and 200 mm.



1 Each subsequent cylinder stroke must be greater than the one that preceded it:
Z1 = 25 mm < Z2 = 50 mm < Z3 = 100 mm < Z4 = 200 mm

2 Sum of individual strokes:
= 375 mm < 500 mm

3 Max. stroke of the last cylinder:
Z4 = 200 mm < 300 mm

4 Max. strokes of the individual cylinders:
Z3 = 100 mm < 200 mm
Z2 = 50 mm < 200 mm
Z1 = 25 mm < 200 mm

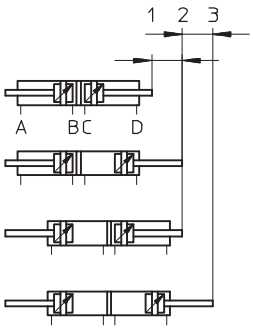
Function principle

A 3 or 4-position cylinder consists of two separate cylinders whose piston rods advance in opposing directions. Depending upon actuation and stroke pattern, this type of cylinder can assume up to four positions. In each case the cylinder is driven precisely against a stop. If one end of the piston rod is fixed, the cylinder barrel executes the movement. The cylinder must be connected with flexible line connections.

Implementing 3 positions

Two cylinders with identical stroke length must be connected to this end.



Implementing 4 positions

Two cylinders with different stroke lengths must be connected to this end.

1) Corrosion resistance class 2 to Festo standard 940 070
Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents.
Corrosion resistance class 4 to Festo standard 940 070
Components requiring higher corrosion resistance. Parts used with aggressive media, e.g. food or chemical industry. These applications should be supported with special tests with the media if required

Trunnion support LNZG

Material:
Trunnion support: Anodised aluminium
Plain bearing: Plastic

Free of copper, PTFE and silicone
