

Standard cylinders DNC-C180, to ISO 15552

# Standard cylinders DNC-C180, to ISO 15552

Key features

FESTO

## At a glance

Sensor slots on the compressed air connection side

- Standards-based cylinders to ISO 15552 (corresponds to the withdrawn standards ISO 6431, DIN ISO 6431, VDMA 24 562, NF E 49 003.1 and UNI 10290)

DIN

- The sensor slots on the compressed air connection side are sealed by the covers at the barrel ends, which means that the proximity sensors can only be inserted from above. End-position sensing via these slots is therefore only possible in combination with the proximity sensors SME/SMT-8M.
- The modern design and construction save up to 11% on fitting space compared to ordinary standard cylinders, thus permitting a considerably more compact system design.

## High quality product

- Proven technology, compact, solid and reliable
- Excellent running characteristics thanks to efficient piston system
- Simple and finely adjustable end-position cushioning thanks to new PPV adjusting screw
- When an ideal setting has been found, imprinted scale ensures easy reproducibility

## Contactless sensing

- The proximity sensors fit flush in the profile slot. On the one hand, this does away with the need for additional mounting kits and on the other, it protects the proximity sensor against mechanical damage.

## Easy to mount

- Wide selection of mounting options
- All accessories and mounting attachments from the DNC range can be used

## Accessories

Guide units protect standard cylinders from torsion when these are subjected to high torque loads. They provide high-precision guidance for handling applications.

The arrangement of the sensor slots on the compressed air connection side means that no additional kit is required for sensing the end positions in combination with the guide unit.

100	38	189	1,000	1,190	174423	DPNC-100

 Note  
The maximum overall stroke length must not be exceeded when combining cylinders and multi-position kits.

## Connecting two cylinders with identical piston diameter as a 3 or 4-position cylinder

A 3 or 4-position cylinder consists of two separate cylinders whose piston rods advance in opposing directions.

This means that depending on actuation and stroke division, this type of cylinder can assume up to four

positions. In each case the cylinder is driven precisely against a stop. Note that when one end of the piston rod is

fixed, the cylinder barrel executes the movement. The cylinder's connections must be flexible.

### To achieve 3 positions

Two cylinders with identical stroke length must be connected together.

### To achieve 4 positions

Two cylinders with different stroke lengths must be connected together.

 Corrosion resistance class 4 according to Festo standard 940 070  
 Components subject to particularly high corrosion stress. Parts used with aggressive media, e.g. in the food or chemical industry. These applications should be supported with special tests with the media if required.

Accessories

## Trunnion mounting kit ZNCM for basic version DNC

The mounting kit can be attached at any position along the profile barrel of a cylinder.

Materials:  
Tempered steel
