

## Spindle axes EGC-BS-KF, with recirculating ball bearing guide

**FESTO**

# Spindle axes EGC-BS-KF, with recirculating ball bearing guide

Key features

FESTO

## At a glance

### Powerful

- Generously sized profiles with an optimised cross section afford maximum rigidity and load capacity
- Speed, acceleration and torque resistance set a new standard

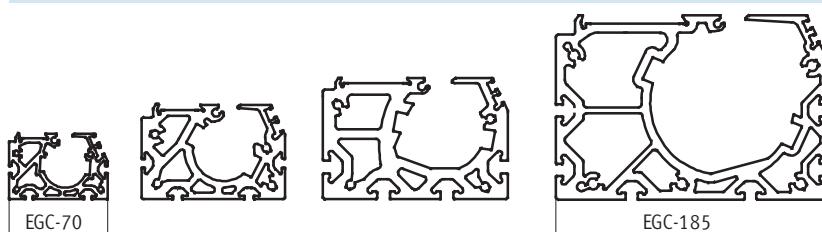

### Economical

- In addition to the technical data, the spindle axis is a winner with its excellent price/performance ratio
- Due to the EGC's high performance it is often possible to use a smaller size

### Versatile

- Different spindle pitches, numerous sizes and variants such as protected guides open up a broad range of applications
- Space-saving position sensing with proximity sensor in the profile slot is possible
- Wide range of options for mounting on drives
- Comprehensive range of mounting accessories for multi-axis combinations
- Spindle support enables maximum travel speed with all stroke lengths (on request)

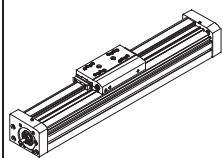

Comprehensive range for the most varied load conditions

## Characteristic values of the axes

The specifications shown in the table are maximum values.

The precise values for each of the variants can be found in the relevant technical data in the catalogue.

Version	Size	Working stroke [mm]	Speed [m/s]	Repetition accuracy [mm]	Feed force [N]	Guide characteristics				
						Forces and torques

Key features

**FESTO**

### Slide variants

Standard slide

Extended slide

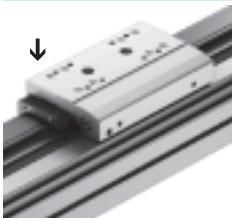

Additional slide

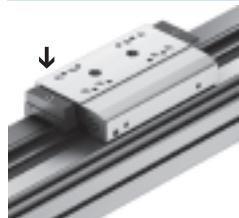

### Guide options

Protected version

- The protected guide cleans the guide rail and protects the recirculating ball bearing guide with the aid of an additional wiper

With central lubrication

- The lubrication adapter enables the guide to be permanently lubricated using semi or fully automatic relubrication devices
- The adapters are suitable for oils and greases
- Both lubrication adapters must be connected

### Complete system comprising spindle axis, motor, motor controller and motor mounting kit

Spindle axis with recirculating ball bearing guide

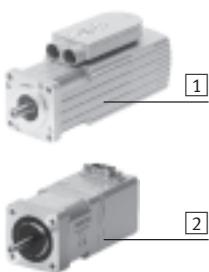

Motor mounting kit

Kit comprising:

- Motor flange
- Coupling housing
- Coupling
- Screws

Motor

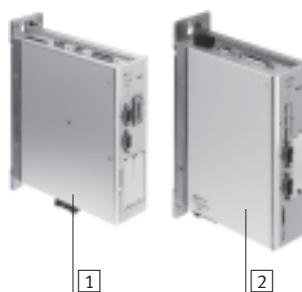

- [1] Servo motor EMMS-AS  
[2] Stepper motor EMMS-ST

 Note

A range of specially adapted complete solutions is available for the spindle axis EGC and the motors.

Motor controller

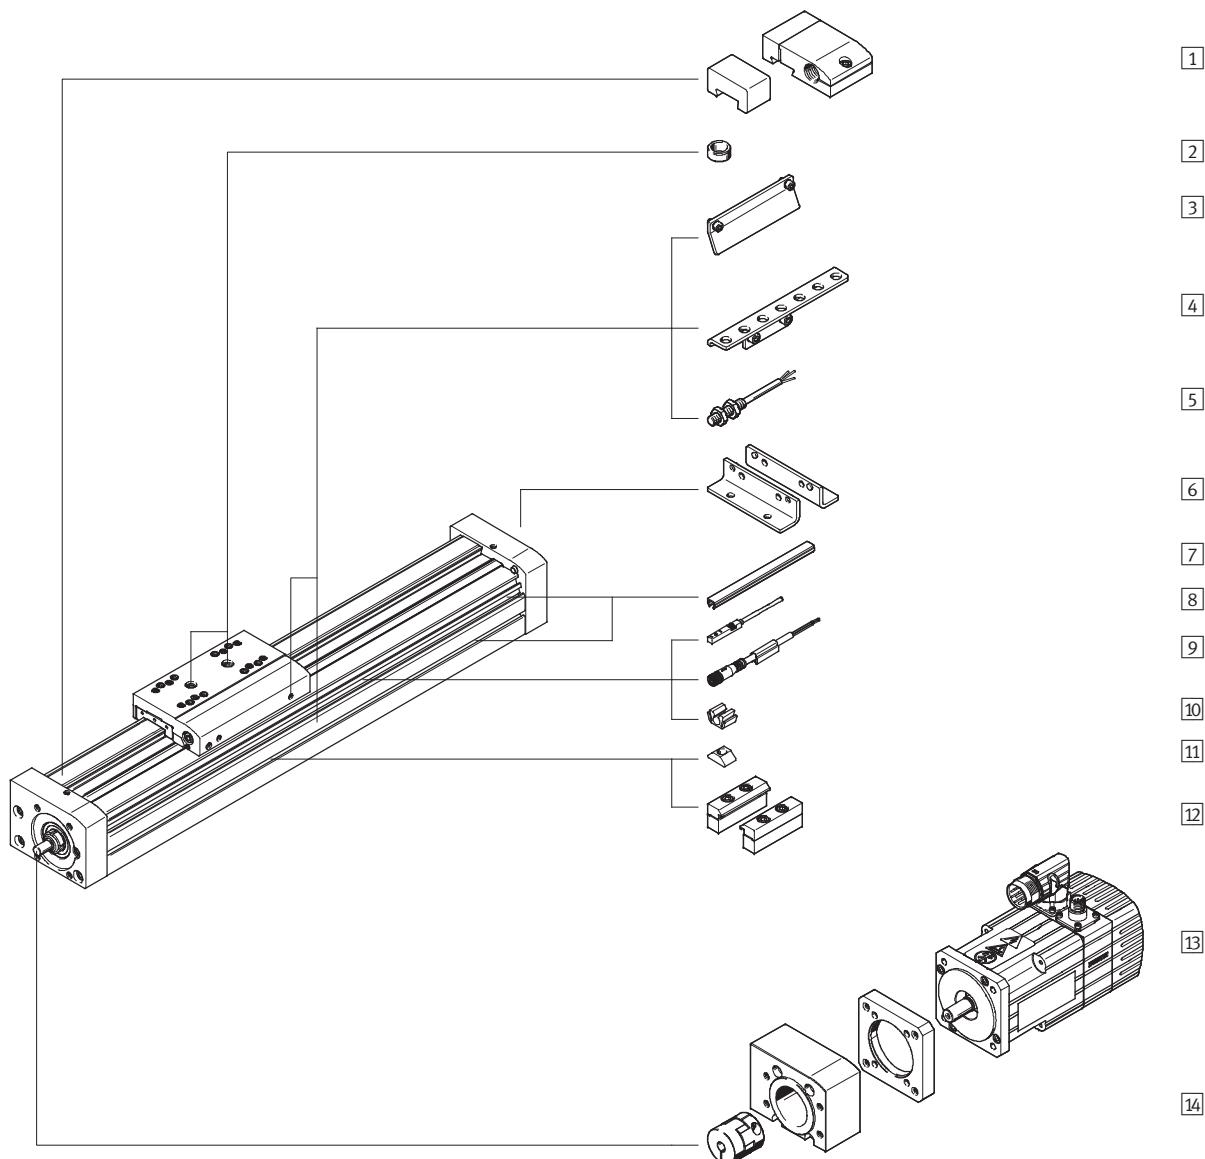

- [1] Servo motor controller CMMP-AS, CMMS-AS  
[2] Stepper motor controller CMMS-ST

## Characteristic load values

The indicated forces and torques refer to the slide surface. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect. These values must not be exceeded during dynamic operation. Special attention must be paid to the cushioning phase.

If the axis is subjected to more than two of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y,dyn}|}{F_{y,max}} + \frac{|F_{z,dyn}|}{F_{z,max}} + \frac{|M_{x,dyn}|}{M_{x,max}} + \frac{|M_{y,dyn}|}{M_{y,max}} + \frac{|M_{z,dyn}|}{M_{z,max}}$$

<b>Permissible forces and torques</b>					
Size	70	80	120	185	
F <sub>y</sub> <sub>max.</sub> [N]	1,850	3,050	6,890	15,200

# Spindle axes EGC-BS-KF, with recirculating ball bearing guide

FESTO

Technical data

## Calculating service life

The service life of the guide depends on the load. To provide a rough indication of the service life of the guide, the

graph below plots the load comparison factor  $f_v$  against the service life.

These values are only theoretical. Consultation with your local contact person at Festo is mandatory for load

comparison factors  $f_v$  greater than 1.5.

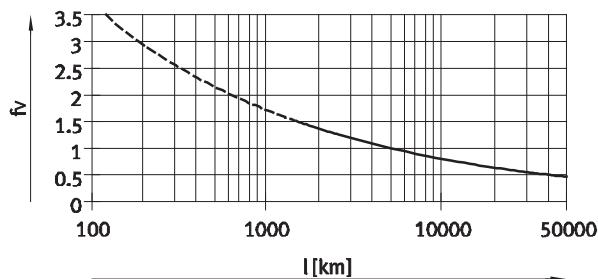

### Load comparison factor $f_v$ as a function of service life

Example:

A user wants to move an X kg load.

Using the formula  $\rightarrow 10$  gives a value of 1.5 for the load comparison factor  $f_v$ . According to the graph, the guide would have a service life of

approx. 1,500 km. Reducing the acceleration reduces the  $M_z$  and  $M_y$  values. A load comparison factor  $f_v$  of 1 now gives a service life of 5,000 km.

- - Note

PositioningDrives  
sizing software  
[www.festo.com](http://www.festo.com)

The guide workload for a service life of 5,000 km can be calculated with the help of the sizing software.

$f_v > 1.5$  are only theoretical comparison values for the recirculating ball bearing guide.

## Stroke reserve

Stroke length	Stroke reserve					
The selected stroke corresponds in principle to the required working stroke. The variants GK/GV do not have a wiper seal on the guide. These variants therefore additionally have a safety distance between the drive cap and slide that is not designated as part of the working stroke.	<p>A safety distance (similar to GK/GV) between the drive cap and slide can be defined for the variants GP/GQ and GK-C/GV-C using the modular product system via the "stroke reserve" feature. With the variants GK/GV, the stroke reserve and safety distance are added for each end position.</p> <ul style="list-style-type: none"> <li>The stroke reserve length can be freely selected</li> <li>The sum of the stroke length and 2x stroke reserve must not exceed the maximum working stroke</li> </ul>					
Size	70	80	120	185		
Spindle pitch	10	10	10	25	40	
L9 = safety distance with GK/GV (per end position) [mm]	10.5	13	13	18	18	21

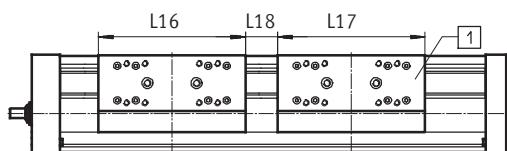

## Working stroke reduction

With standard slide GK/GP / extended slide GV/GQ with additional slide KL/KR

- For a spindle axis with additional slide, the working stroke is reduced by the length of the additional slide and the distance between both slides
- If the variant GP/GQ is ordered, the additional slide is also protected
- If the variant GV/GQ is ordered, the additional slide is not extended
- If the variant GK-C/GV-C is ordered, the additional slide is also supplied with lubrication adapters

L16 = Slide length  
L17 = Additional slide length

L18 = Distance between both slides  
① Additional slide

### Example:

Type EGC-70-500-BS-...-GK-KR  
Working stroke without additional slide = 500 mm  
L18 = 20 mm  
L16, L17 = 100 mm

Working stroke with additional slide = 380 mm  
(500 mm - 20 mm - 100 mm)

## Dimensions – Additional slide

Min. distance between the slides L18 [mm]	–	21	–	26	–	36	–	42

## Working stroke reduction per side

With integrated emergency buffer NPE and shock absorber retainer KYE

- With a spindle axis, the working stroke is reduced by the total dimension of the emergency buffer and shock absorber retainer. The rubber buffer in the cap must be removed.
- Shock absorbers must not be used in combination with GK-C/GV-C.

## Maximum permissible support span L (without profile mounting) as a function of force F

In order to limit deflection in the case of large strokes, the axis may need to be supported.

The following graphs serve to determine the maximum permissible support span l as a function of force F acting on the axis. The deflection is f = 0.5 mm.

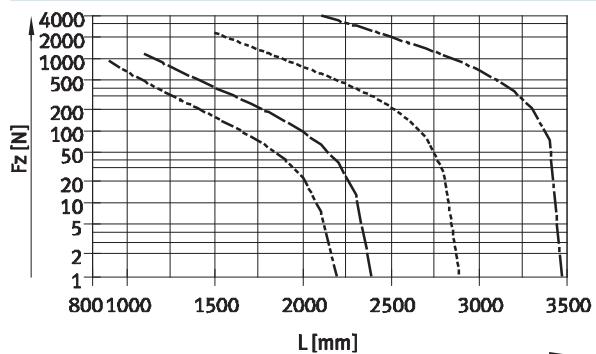

### Force Fy

- EGC-70
- - EGC-80
- · EGC-120
- · - EGC-185

### Force Fz

## Recommended deflection limits

Adherence to the following deflection limits is recommended so as not to impair the functional performance of

the axes. Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dyn. deflection (load moving)	Stat. deflection (stationary load)
70 ... 185	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

## Shock absorber retainer KYE

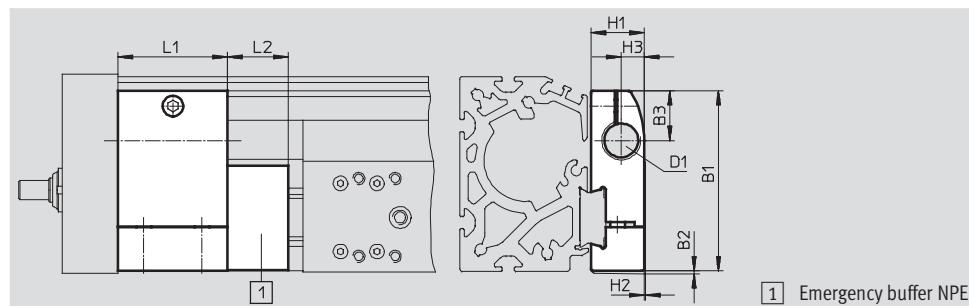

Emergency buffer NPE → 40  
(order code A)

Material:

Anodised aluminium  
RoHS-compliant

Cannot be used in combination with  
the variants GP and GQ or GK-C and  
GV-C.

## Dimensions and ordering data
