### Guide options

Protected version

- The protected guide cleans the guide rail and protects the recirculating ball bearing guide with the aid of an additional wiper

With central lubrication

- The lubrication adapter enables the guide to be permanently lubricated using semi or fully automatic relubrication devices
- The adapters are suitable for oils and greases
- Both lubrication adapters must be connected

## Characteristic load values

The indicated forces and torques refer to the slide surface. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect. These values must not be exceeded during dynamic operation. Special attention must be paid to the cushioning phase.

If the axis is subjected to more than two of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y,dyn}|}{F_{y,max}} + \frac{|F_{z,dyn}|}{F_{z,max}} + \frac{|M_{x,dyn}|}{M_{x,max}} + \frac{|M_{y,dyn}|}{M_{y,max}} + \frac{|M_{z,dyn}|}{M_{z,max}}$$

Technical data

## Calculating service life

The service life of the guide depends on the load. To provide a rough indication of the service life of the guide, the

graph below plots the load comparison factor  $f_v$  against the service life.

These values are only theoretical. Consultation with your local contact person at Festo is mandatory for load

comparison factors  $f_v$  greater than 1.5.

## Load comparison factor $f_v$ as a function of service life

Example:

A user wants to move an X kg load.

Using the formula  $\rightarrow 10$  gives a value of 1.5 for the load comparison factor  $f_v$ . According to the graph, the guide would have a service life of

approx. 1,500 km. Reducing the acceleration reduces the  $M_z$  and  $M_y$  values. A load comparison factor  $f_v$  of 1 now gives a service life of 5,000 km.

-  - Note

PositioningDrives  
sizing software  
[www.festo.com](http://www.festo.com)

The guide workload for a service life of 5,000 km can be calculated with the help of the sizing software.

$f_v > 1.5$  are only theoretical comparison values for the recirculating ball bearing guide.

## Stroke reserve

**Stroke length**                      **Stroke reserve**

The selected stroke corresponds in principle to the required working stroke. The variants GK/GV do not have a wiper seal on the guide. These variants therefore additionally have a safety distance between the drive cap and slide that is not designated as part of the working stroke.

A safety distance (similar to GK/GV) between the drive cap and slide can be defined for the variants GP/GQ and GK-C/GV-C using the modular product system via the "stroke reserve" feature. With the variants GK/GV, the stroke reserve and safety distance are added for each end position.

- The stroke reserve length can be freely selected
- The sum of the stroke length and 2x stroke reserve must not exceed the maximum working stroke

**Example:**  
 Type EGC-70-500-TB-KF-20H-...  
 Working stroke                      = 500 mm  
 2x stroke reserve                      = 40 mm  
 Total stroke                              = 540 mm  
 (540 mm = 500 mm + 2x 20 mm)

Size	50	70	80	120	185
L9 = safety distance with [mm] GK/GV (per end position)	–	10.5	13	18	21

## Working stroke reduction

With standard slide GK/GP / extended slide GV/GQ with additional slide KL/KR

- With a toothed belt axis with additional slide, the working stroke is reduced by the length of the additional slide and the distance between both slides
- If the variant GP/GQ is ordered, the additional slide is also protected
- If the variant GV/GQ is ordered, the additional slide is not extended
- If the variant GK-C/GV-C is ordered, the additional slide is also supplied with lubrication adapters

L16 = Slide length                      L18 = Distance between both slides  
 L17 = Additional slide length                      ① Additional slide

**Example:**  
 Type EGC-70-500-TB-...-GK-KR                      Working stroke with additional slide = 380 mm  
 Working stroke without additional slide = 500 mm  
 L18 = 20 mm  
 L16, L17 = 100 mm  
 (500 mm – 20 mm – 100 mm)

## Working stroke reduction per side

With integrated emergency buffer NPE/shock absorber YSRW with shock absorber retainer KYE

- With a toothed belt axis, the working stroke is reduced by the total dimension of the emergency buffer/shock absorber and shock absorber retainer
- Shock absorbers must not be used in combination with GK-C/GV-C

## Maximum permissible support span L (without profile mounting) as a function of force F

In order to limit deflection in the case of large strokes, the axis may need to be supported.

The following graphs serve to determine the maximum permissible support span  $l$  as a function of force  $F$  acting on the axis. The deflection is  $f = 0.5$  mm.

## Recommended deflection limits

Adherence to the following deflection limits is recommended so as not to impair the functional performance of

the axes. Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dyn. deflection (load moving)	Stat. deflection (stationary load)
50 ... 185	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

- 1** -... The sum of the stroke length and 2x stroke reserve must not exceed the maximum stroke length.
- 2** **KL, KR** If the protected slide variant (GQ, GP) is selected, the additional slide (KL, KR) is also protected.  
If the extended slide variant (GQ, GV) is selected, then the additional slide (KL, KR) is not extended.  
If the slide with lubrication adapter (GK-C) is selected, then the additional slide (KL, KR) is also supplied with lubrication adapter.  
Additional slides (KL, KR) cannot be ordered for long strokes → product configurator. Please contact your local contact person at Festo if necessary.
- 3** ... **A** Emergency buffer with retainer A cannot be combined with slide GP, GQ, GK-C, GV-C and shock absorber with retainer C.
- 4** ... **C** Shock absorber with retainer C cannot be combined with slide GP, GQ, GK-C, GV-C and emergency buffer with retainer A.
- 5** ... **K** No drive shaft is required for the axis/motor combinations → from 30.

The code X, Z includes a switch lug in the scope of delivery.

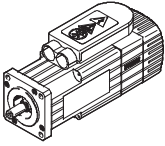

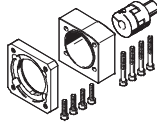

The code O, P, W, R includes one switch lug and max. two sensor brackets in the scope of delivery.

**Switch lug SF-EGC-1**  
 For sensing with proximity sensor  
 SIES-8M  
 (order code X or Z)

Material:  
 Galvanised steel  
 RoHS-compliant

- With size 50, max 3 proximity sensors can be supported when querying both end positions.

For additional proximity sensors, a stroke reserve of 25 mm is required.
