

Motor controllers CMMP-AS-M3, for servo motors

FESTO

Motor controllers CMMP-AS-M3, for servo motors

Key features

Comparison of motor controllers				
Motor controller for motor type	CMMD-AS Servo motor	CMMS-AS Servo motor	CMMP-AS Servo motor	CMMS-ST Stepper motor
Positioning records	2 x 63	63	255	63
Measuring system	Incremental/absolute		Analogue/incremental/ absolute	Incremental
Extended I/O interface	4 working modes		Flexibly configurable	4 working modes
Remaining distance message	1 for n		Separately for all positions	1 for n
Torque reduction	No		Separately for all positions	No
Record linking	Linear		With branching	Linear
STO/SS1	To EN 61800-5-2		To EN 61800-5-2	To EN 61800-5-2

Features	Compactness	Motion control	Input/output	Integrated sequence control
Fieldbus interfaces	<ul style="list-style-type: none"> Very small dimensions Full integration of all components for the controller and power section, including USB interface, Ethernet and CANopen interface Integrated brake chopper Integrated EMC filters 	<ul style="list-style-type: none"> Automatic actuation for a holding brake Complies with the current CE and EN standards without additional external measures (motor cable length of up to 25 m) 	<ul style="list-style-type: none"> Evaluation of digital absolute encoder (EnDat/HIPERFACE) in single-turn or multi-turn versions Can be operated as a torque, speed or position controller Integrated position controller Time-optimised (trapezoidal) or jerk-free (S-shaped) positioning 	<ul style="list-style-type: none"> Absolute and relative movements Point-to-point positioning with and without motion path smoothing Position synchronisation Electronic gear unit 255 positioning records Wide range of homing methods
Integrated:	CANopen	Optional:	<ul style="list-style-type: none"> Freely programmable I/Os High-resolution 16-bit analogue input Jog/teach mode Simple linking to a higher-level controller via I/O or fieldbus Synchronous operation Master/slave mode Additional I/Os with the plug-in card CAMC-D-8E8A → 14 	<ul style="list-style-type: none"> Automatic sequence of positioning records without a higher-level controller Linear and cyclical position sequences Adjustable delay times Branches and wait positions Overlapping restart possible during the movement

Motor controllers CMMP-AS-M3, for servo motors

Key features

Features	Integrated safety functions	Interpolating multi-axis movement
<p>Travel program</p> <ul style="list-style-type: none"> With the optional plug-in card CAMC-G-S1, the motor controller CMMP-AS supports the "Safe Torque Off (STO)" safety function and, by providing a reliable time delay, also supports "Safe Stop 1 (SS1)", with protection against unexpected start-up in accordance with EN 61800-5-2 Protection against unexpected start-up 	<ul style="list-style-type: none"> Two-channel disconnection of the output stage Less external circuitry Shorter response times in the event of an error Faster restart, intermediate circuit remains charged 	<ul style="list-style-type: none"> With a suitable controller, the CMMP-AS can perform path movements with interpolation via CANopen or EtherCat. The controller specifies setpoint position values in a fixed time pattern to this end. In between, the servo position controller independently interpolates the data values between two data points.

Travel program

- Linking of any number of positioning records into a travel program
- Step criteria for the travel program possible via digital inputs, for example
 - MC – Motion complete
 - I/O – Digital inputs

Library for EPLAN

EPLAN macros for fast and reliable planning of electrical projects in combination with motor controllers,

motors and cables. This enables a high level of planning reliability, standardisation of

→ www.festo.com/eplan

documentation, no need to create symbols, graphics and master data.

Cam disc functionality

→ 15

The "electronic cam disc" application type creates optimised motion profiles that generate less vibration and acceleration force at the machine. In addition, the motion of the motor is always synchronous in position with a master axis, which enables easy definition of overlapping, time-optimised motion sequences.

To be able to use the cam disc function, you will need the Festo Configuration Tool (FCT) and also the curve editor → 15.

Key features:

- High flexibility of the system. The mechanism does not need to be modified if the requirements for the curve shapes change.
- User-friendly motion plan editor. All limits for position, speed and acceleration are immediately displayed in the editor.
- Up to 16 cam discs with a total of up to 2,048 data points can be managed. The data points can be randomly distributed along the cam discs.
- There are four digital trip cams coupled with each cam disc.
- Each cam disc can be offset by a certain amount from the master axis.

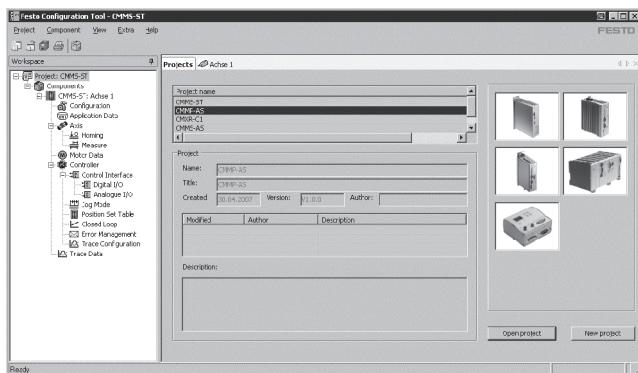

Motor controllers CMMP-AS-M3, for servo motors

Key features

FESTO

FCT software – Festo Configuration Tool

Software platform for electric drives from Festo

- All drives in a system can be managed and saved in a common project
- Project and data management for all supported device types
- Simple to use thanks to graphically supported parameter entry
- Universal mode of operation for all drives
- Working offline at your desk or online at the machine

FHPP – Festo Handling and Positioning Profile

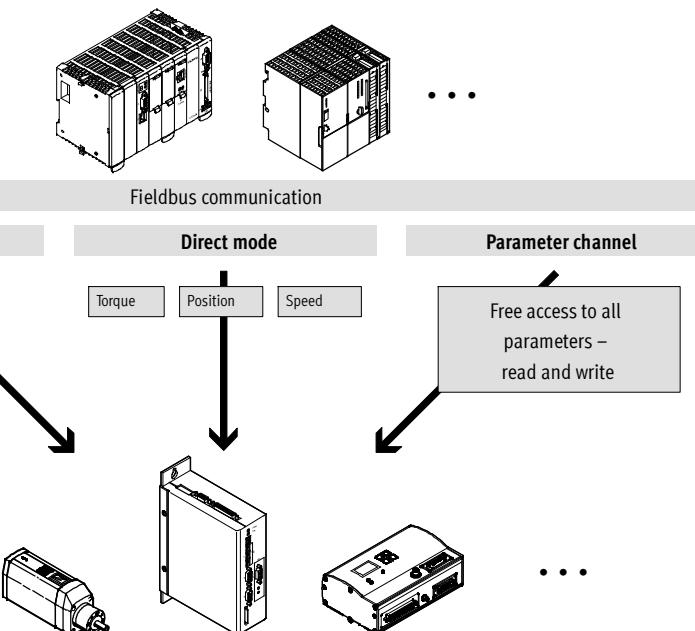

Optimised data profile

Festo has developed an optimised data profile, the "Festo Handling and Positioning Profile (FHPP)", which is especially tailored to handling and positioning applications.

The FHPP data profile permits the actuation of Festo motor controllers, using a fieldbus interface, via standardised control and status bytes.

The following are defined, among others:

- Operating modes
- I/O data structure
- Parameter objects
- Sequence control
