

Cantilever axes EGSA, with spindle drive

FESTO

Cantilever axes EGSA, with spindle drive

Key features

At a glance

The spindle driven cantilever axis EGSA reduces cycle times to an absolute minimum. This is thanks to a powerful mechanical system and a range of motor choices adapted to the requirements of the application.

In contrast to the electric cantilever axis DGEA designed for longer strokes, the EGSA demonstrates its strengths with short strokes.

Advantages:

- Maximum precision
- High dynamic response
- Repetition accuracy of ± 0.01 mm

Complete system comprises cantilever axis, motor, motor controller and motor mounting kit

Spindle driven cantilever axis

With axial kit

With parallel kit

Note

The spindle driven cantilever axis must only be mounted using the underside of the base profile (→ picture on left). The lateral holes on the base profile are provided for securing accessories (e.g. protective trunking).

Motor

→ 11

[1]

[2]

- [1] Servo motor EMMS-AS
- [2] Stepper motor EMMS-ST

Note

A range of specially adapted complete solutions is available for the spindle driven cantilever axis EGSA and the motors.

Motor controller

Technical data → Internet: motor controller

[1]

- [1] Servo motor controller CMMP-AS
- [2] Stepper motor controller CMMS-ST

Motor mounting kit

→ 11

Axial kit

Parallel kit

There are complete kits for both parallel and axial motor mounting.

Max. effective load, vertical	[kg]	3	6		
Continuous driving torque	[Nm]	0.2	1		
Max. radial force ¹⁾	[N]	60	110		

1) On the drive shaft

Calculation of the mean feed force F_{xm}

The peak feed force value must not exceed the maximum feed force within a movement cycle. In the case of vertical operation, the peak value is generally

achieved during the acceleration phase of the upwards stroke. If the maximum feed force is exceeded, this can increase wear and thus shorten

the service life of the ball screw spindle. The maximum speed must likewise not be exceeded.

$$F_x \leq F_{x\max}$$

and

$$v_x \leq v_{x\max}$$

Mean feed force (to DIN 69 051-4)

During operation, the continuous feed force may be briefly exceeded up to

the maximum feed force. The continuous feed force must, however, be

adhered to when averaged over a movement cycle.

$$F_{xm} \leq F_{xcont}$$

$$F_{xm} = \sqrt[3]{\sum F_x^3 \times \frac{v_x}{v_{xm}} \times \frac{q}{100}} =$$

$$F_{xm} = \sqrt[3]{F_{x1}^3 \times \frac{v_{x1}}{v_{xm}} \times \frac{q_1}{100} + F_{x2}^3 \times \frac{v_{x2}}{v_{xm}} \times \frac{q_2}{100} + F_{x3}^3 \times \frac{v_{x3}}{v_{xm}} \times \frac{q_3}{100} + \dots}$$

Mean feed speed (to DIN 69 051-4)

$$v_{xm} = \sum v_x \times \frac{q}{100} = v_{x1} \times \frac{q_1}{100} + v_{x2} \times \frac{q_2}{100} + v_{x3} \times \frac{q_3}{100} + \dots$$

F_x Feed force
 F_{xm} Mean feed force
 $F_{x\max}$ Max. feed force
 F_{xcont} Continuous feed force
 q Time

v_x Feed speed
 v_{xm} Mean feed speed
 $v_{x\max}$ Max. feed speed

FESTO

Technical data

Characteristic load values of the guide

The indicated forces and torques refer to the centre of the guide rail. They must not be exceeded during dynamic operation. Special attention must be paid to the cushioning phase.

If the cantilever axis is simultaneously subjected to several of the forces and torques listed below, the following equation must be satisfied in addition to the indicated maximum loads:

$$\left| \frac{F_y}{F_{y\max.}} \right| + \left| \frac{F_z}{F_{z\max.}} \right| + \left| \frac{M_x}{M_{x\max.}} \right| + \left| \frac{M_y}{M_{y\max.}} \right| + \left| \frac{M_z}{M_{z\max.}} \right| \leq 1$$

Permissible forces and torques

Size	50	60
$F_{y\max.}$ [N]	150	200
$F_{z\max.}$ [N]	150	200
$M_{x\max.}$ [Nm]	10	25
$M_{y\max.}$ [Nm]	25	70
$M_{z\max.}$ [Nm]	25	70
