

**Electric cylinders ESBF, with spindle drive**

## Electric cylinders ESBF, with spindle drive

Key features

### At a glance

The electric cylinder ESBF is a mechanical linear drive unit with piston rod. The driving component consists of an electrically actuated spindle that converts the rotary motion of the motor into a linear motion of the piston rod.

The electric cylinder is based on the ISO 15552 standard. The mechanical interfaces are largely compatible with the standard cylinder DSBF.

Options:

- High corrosion protection
- Protection class IP65
- Piston rod extension
- NSF-H1 lubricant
- Wide range of accessories

### Complete system consisting of electric cylinder, motor and motor mounting kit

Electric cylinder

→ 4

Motor

→ 18

 **Note**

A range of specially adapted complete solutions is available for the electric cylinder ESBF and the motors.

Motor mounting kit

→ 18

Axial kit

Parallel kit

A range of complete kits is available for both parallel and axial motor mounting.

# Electric cylinders ESBF, with spindle drive

Features and type codes

**Use in dusty environments with a protective bellows kit EADB**

→ 22

The protective bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air must be ducted via a pressure compensation hole in the connection part **1**.

The kit protects the piston rod, seal

and bearings against a wide variety of media, for example:

- Dust
- Chippings
- Oil
- Grease
- Fuel

**Protection class IP65 (feature S1) allows it to be used in wet environments**

→ 17

The electric cylinder to IP65 fulfils the specifications to IEC 60 529.

Air is exchanged between the interior of the cylinder and the environment via a pressure compensation hole **1** in the cylinder barrel. This prevents negative pressure or excess pressure in the interior of the cylinder.

It also prevents unwanted media being drawn in.

ESBF-...-R3		3
Duty cycle	[%]	100

1) Note operating range of proximity sensors and motors

2) Corrosion resistance class 2 according to Festo standard 940 070

Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents.

Corrosion resistance class 3 to Festo standard 940 070

Components subject to high corrosion stress. External visible parts in direct contact with industrial atmospheres or media such as solvents and cleaning agents, with a predominantly functional requirement for the surface.

Mass moment of inertia										
Size		63			80			100		
Spindle pitch	[mm/rev.]	5	10	25	5	15	32	5	20	40
$J_0$ with 0 mm stroke	[kg cm <sup>2</sup> ]	0.491	0.486	0.650	1.529	1.648	2.119	4.696	5.050	6.170
$j_S$ per metre stroke	[kg cm <sup>2</sup> /m]	2.832	2.859	3.053	7.699	7.815	8.277	18.978	19.310	20.372
$j_L$ per kg effective load	[kg cm <sup>2</sup> /kg]	0.006	0.025	0.158	0.006	0.057	0.259	0.006	0.101	0.405

The mass moment of inertia  $J_A$  of the electric cylinder is calculated as follows:

$$J_A = J_0 + j_S \times \text{working stroke [m]} + j_L \times m_{\text{moving effective load [kg]}}$$

Technical data

## Service life

The service life of the electric cylinder depends considerably on the service life of the recirculating ball spindle.

The service life specifications refer to an operational coefficient of  $f_B = 1.0$  (→ table below).

The specifications for running performance are based on experimentally determined and theoretically calculated data.

The running performance attainable in practice can deviate considerably from the specified curves under different parameters.

Mean feed force  $F$  as a function of running performance  $L$ , with an operational coefficient of 1

$$L_{ist} = \frac{L_0}{f_B^3}$$

$L_{ist}$  = Actual service life

$L_0$  = Target service life

(→ graph)

$f_B$  = Operational coefficient

Shock load	Operational coefficient $f_B$

Technical data

## Friction losses and driving torque

### Friction losses

The friction losses comprise the no-load driving torque and the speed-dependent friction losses.

$$M_{\text{reib}} = M_{\text{leerlauf}} + M_V$$

$M_{\text{reib}}$  = Friction torque

$M_{\text{leerlauf}}$  = No-load driving torque

$M_V$  = Speed-dependent friction torque

### Driving torque

The driving torque required for the cylinder comprises the friction torque and the effective torque.

$$M_{\text{antrieb}} = M_{\text{reib}} + M_{\text{nutz}}$$

$M_{\text{antrieb}}$  = Required driving torque

$M_{\text{reib}}$  = Friction torque

$M_{\text{nutz}}$  = Effective torque

### No-load driving torque<sup>1)</sup>

Size	63			80			100		
Spindle pitch [mm/rev.]	5	10	25	5	15	32	5	20	40
No-load driving torque [Nm]	0.3	0.3	0.4	0.9	1.1	1.3	1.3	1.1	1.5

1) Corresponds to the required driving torque without load, at a spindle speed of 200 rpm.

### Effective torque $M_{\text{nutz}}$ as a function of feed force $F$

## Protective bellows kit EADB

General technical data		
Type EADB-V2-	63	80
Max. stroke range of cylinder <sup>1)</sup>	[mm]	10 ... 500
Type of mounting	Slip-on Via threaded pin	
Mounting position	Any	
Resistance to media	Dust, chippings, oil, grease, fuel (→ Internet: Resistance to media)	
Ambient temperature <sup>2)</sup>	[°C]	-10 ... +80
Protection class to IEC 60529	IP65	
Corrosion resistance class CRC <sup>3)</sup>	3	

- 1) In combination with the protective bellows kit EADB
- 2) Note operating range of proximity sensors and cylinder
- 3) Corrosion resistance class 3 according to Festo standard 940 070  
Components subject to high corrosion stress. External visible parts in direct contact with industrial atmospheres or media such as solvents and cleaning agents, with a predominantly functional requirement for the surface.

## Materials

Sectional view

Bellows	
1	Connection Anodised wrought aluminium alloy
2	Adapter Polyamide
3	Bellows Nitrile rubber
4	End piece Anodised wrought aluminium alloy
-	O-ring Nitrile rubber
Note on materials Free of copper and PTFE RoHS-compliant

# Electric cylinders ESBF, with spindle drive

Accessories

## Travel speed $v$ as a function of tubing length $l$

The bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air must be ducted via a pressure compensation hole in the connection part **1**.

The pressure generated in the protective bellows kit by the positioning motion is primarily defined by the travel speed and tubing length. The recom-

mended tubing length based on the travel speed of the drive can be read from the graph.

### For size 63

— EADB-V2-63/tubing Ø 12 mm  
 - - - EADB-V2-63/tubing Ø 16 mm

### For size 80

— EADB-V2-80/tubing Ø 12 mm  
 - - - EADB-V2-80/tubing Ø 16 mm

 Note  
 The push-in fittings opposite must be used for the pressure compensation hole. Silencers can be used as an alternative. This reduces the travel speed slightly.

Tubing length and push-in fitting for pressure compensation hole			
Ø [mm]	Tubing O.D. [mm]	Push-in fitting

1) The dimension corresponds to the E value (piston rod extension) of the cylinder

**Ordering data – Protective bellows kit**

An extended piston rod (order code ...E) → 17 is absolutely essential if a protective bellows kit is to be used.

The necessary dimensions for ...E as a function of cylinder size and stroke as well as the corresponding protective bellows kit are indicated in the following table:

**Order example:**

Selected electric cylinder:

ESBF-BS-63-250-5P-...E

The dimension for the corresponding E value (see table):

82 mm

Complete type code for electric cylinder:

ESBF-BS-63-250-5P-82E

The corresponding protective bellows kit:

EADB-V2-63-S201-300

## Trunnion mounting kit ZNCM

Material:  
Galvanised steel

The mounting kit can be attached at any position along the profile barrel of the cylinder.

The trunnion mounting kit cannot be

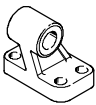

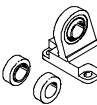

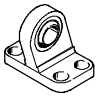

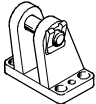

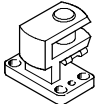

mounted in the vicinity of the motor when used in combination with the parallel kit EAMM-U.

## Sensor mounting

The sensor mountings can only be attached within the highlighted area due to the asymmetry of the internal magnets.

The proximity sensors may not switch reliably if they are mounted outside of this area.

The overall length of the sensor rail SAMH corresponds to the length of the sensing range plus approx. 10 mm adjustment range on either side for the proximity sensors.

Size	L1	L2	L3
