

Valve terminals VTSA/VTSA-F

# Valve terminals VTSA/VTSA-F

Key features

FESTO

## Innovative

- High-performance valves in sturdy metal housing
- Four valve sizes on one valve terminal
- Standardised from the multi-pin plug to the fieldbus connection and control block
- Dream team: fieldbus valve terminal suitable for electrical peripherals CPX. This means:
  - Forward-looking internal communication system for actuating the valves and CPX modules
  - Four valve sizes on one valve terminal without adapters
- Valve functions for integration in control architectures of higher categories to EN ISO 13849-1

## Versatile

- Modular system offering a range of configuration options
- Expandable with up to 32 solenoid coils
- Conversions and extensions are possible at any time
- Manifold sub-bases can be extended using four screws, sturdy duct separation on metal support
- Integration of innovative function modules possible
- Supply plates enable a flexible air supply and variable pressure zones
- Reverse operation
- High pressure range  
– 0.9 ... 10 bar,  
flow range 400 ... 2,900 l/min
- Wide range of valve functions
- Valve supply 24 V DC or 110 V AC

## Reliable

- Sturdy and durable metal components
  - Valves
  - Manifold sub-bases
  - Seals
- Fast troubleshooting thanks to LEDs on the valves and diagnostics via fieldbus
- Convenient servicing thanks to valves that can be replaced quickly and easily
- Manual override either non-detenting, non-detenting/detenting or covered
- Durable thanks to tried-and-tested piston spool valves
- Large and durable labelling system
- 100% duty cycle

## Easy to mount

- Ready-to-install and tested unit
- Lower selection, ordering, installation and commissioning costs
- Secure mounting on wall or H-rail

 Note

The key features, valves and functions of width 65 mm are described separately in the chapter “Adaptation

to width 65 mm, ISO size 3 (technology type 04)”  
→ Page 124.

# Valve terminals VTSA/VTSA-F

## Key features

Reduced downtimes:  
On-the-spot diagnostics via LEDs

Width 18 mm, 26 mm,  
42 mm and 52 mm can be combined on a single valve terminal without adapter

Pneumatic interface to CPX

Simple electrical connections  
– Fieldbus connection via CPX  
– Multi-pin plug connection with pre-assembled cable or terminal strip (Cage Clamp®)  
– Control block via CPX  
– AS-interface  
– Individual connection

CPX diagnostic interface for handheld devices (channel-oriented diagnostics down to the individual valve)

Quick mounting:  
Direct mounting using screws or H-rail

Safe:  
Valves, outputs and logic voltage can be switched off separately

Reliable operation:  
Manual override, non-detenting/detenting or covered

Flexible:  
– 32 valve positions/32 solenoid coils  
– One valve series for a wide range of flow rates

Functional:  
Large ports, flow-optimised ducts, sturdy metal thread or pre-assembled QS connectors

Modular:  
Supply plates facilitate the creation of multiple pressure zones as well as numerous additional exhaust and supply ports  
Comprehensive range of valve functions

Practical:  
Large inscription labels

## Equipment options

### Valve functions

- 2x 2/2-way valve, single solenoid, pneumatic spring, normally closed
- 2x 3/2-way valve, single solenoid
  - Normally open
  - Normally open, reversible
  - Normally closed
  - Normally closed, reversible
- 2x 3/2-way valve, single solenoid
  - 1x normally open, 1x normally closed
  - 1x normally open, 1x normally closed, reversible
- 5/2-way valve
  - Single solenoid, pneumatic spring/mechanical spring
  - Double solenoid
  - Double solenoid with dominant signal
- 5/2-way valves for special functions, single solenoid
  - Mechanical spring
  - Switching position sensing via inductive sensors with PNP or NPN output
  - Protection against unexpected start-up to EN 1037
  - Reversing
- 5/3-way solenoid valve
  - Mid-position pressurised
  - Mid-position closed
  - Mid-position exhausted
- 5/3-way solenoid valve for special functions
  - Switching position 14 with memory function (switching position 14 is retained in the event of an emergency-stop application/power failure), there is no spring return on switching position 12
  - Only for valve terminal (plug-in)
  - Mid-position exhausted or mid-position 1 → 2, 4 → 5
  - Switching position 14 with memory function
  - Pneumatic spring return
- Soft-start valve for slow and safe pressure build-up
  - High degree of safety
  - Sensor function provides feedback on switching operation

 Note

The key features, valves and functions of width 65 mm are described separately in the chapter

“Adaptation to width 65 mm, ISO size 3 (technology type 04)”  
→ Page 124.

Values in brackets apply to VTSA-F

Valve terminal configurator <span style="float: right;">→ Internet: <a href="http://www.festo.com">www.festo.com</a></span>			
A valve terminal configurator is available to help you select a suitable VTSA/VTSA-F valve terminal. This makes it much easier to order the right product.	The valve terminals are fully assembled according to your order specification and are individually tested. This reduces assembly and installation time to a minimum.	You order a valve terminal VTSA using the order code:  Ordering system for VTSA → Internet: <a href="http://vtsa">vtsa</a>  Ordering system for CPX → Internet: <a href="http://cpx">cpx</a>	You order a valve terminal VTSA-F using the order code:  Ordering system for VTSA-F → Internet: <a href="http://vtsa-f">vtsa-f</a>  Ordering system for CPX → Internet: <a href="http://cpx">cpx</a>

# Valve terminals VTSA/VTSA-F

Key features

FESTO

## Individual pneumatic connection

Valves on individual sub-bases up to width 52 mm can be used for actuators further away from the valve terminal.

The electrical connection is established either via a standardised 4-pin M12 plug, 24 V DC (EN 61076-2-101), 4-pin spring-

loaded terminal or a cable with open end 24 V DC or 110 V AC, which are configured by the user.

## Valve terminal with individual electrical connection

Control signals from the controller to the valve terminal are transmitted via an individual connecting cable.

The valve terminal can be equipped with max. 20 valves and max. 20 solenoid coils.

The electrical connection is established via a 5-pin M12 plug, 24 V DC.

## Valve terminal with multi-pin plug connection

Control signals from the controller to the valve terminal are transmitted via a pre-assembled multi-wire cable or a self-assembled multi-pin plug connection (spring-loaded terminal), which substantially reduces installation time.

The valve terminal can be equipped with max. 32 valves and max. 32 solenoid coils.

Versions

- Multi-pin plug connection with terminal strip (spring-loaded terminal) 24 V DC or 110 V AC
- Pre-assembled connecting cable 24 V DC
- Sub-D plug connector for assembly by the user, 37-pin
- Round plug connector M23, 19-pin, 24 V DC

## AS-interface connection

A special feature of the AS-interface is the simultaneous transmission of data and supply power via a two-wire cable. The encoded cable profile prevents connection with incorrect polarity.

The valve terminal with AS-interface is available in the following versions:

- With one to eight modular valve positions (max. 8 solenoid coils). This corresponds to one to eight VSVA valves.
- With all available valve functions. The connection technology used for the inputs can be selected as with

CPX: M8, M12, quick connection, Sub-D, spring-loaded terminal (terminals to IP20).

Additional information

➔ Internet: as-interface

Note

The valve terminal VTSA/VTSA-F with AS-interface connection is based on the same electrical interlinking module as the valve terminal with multi-pin plug connection. This means it is possible to convert a valve terminal with multi-pin plug connection using

an AS-interface module (➔ 93). The technical specifications of the AS-interface system must be observed in this case.

➔ Page 51

➔ Internet: as-interface

# Valve terminals VTSA/VTSA-F

Key features

FESTO

## Valve terminal with fieldbus connection from the CPX system

An integrated fieldbus node manages the communication connection with a higher-order PLC. This enables a space-saving pneumatic and electronic solution.

Valve terminals with fieldbus interfaces from the CPX system can be configured with up to 16 manifold sub-bases. With 2 solenoid coils per connection, up to 32 solenoid coils can thus be actuated.

### Versions

- Profibus DP
- Interbus
- DeviceNet
- CANopen
- CC-Link
- CPX terminal
- Ethernet/IP
- EtherCAT
- CoDeSys controller
- Modbus/TCP
- PROFINET

➔ Internet: cpx

## Valve terminal with control block connection from the CPX system

A controller integrated in the Festo valve terminal enables the construction of stand-alone control units with protection to IP65 without a control cabinet thanks to two different operating modes.

In the slave operating mode, these valve terminals can be used for intelligent preprocessing and are therefore ideal modules for designs using decentralised intelligence.

In the master operating mode, terminal groups can be designed with many options and functions that can autonomously control a medium-sized machine/system.

➔ Internet: cpx

## CP string extension from the CPX system

The optional CP string extension enables additional valve terminals and I/O modules to be connected to the fieldbus node of the CPX terminal on up to 4 CP strings. Different input and output modules as well as CPV-SC, CPV and CPA valve terminals can be connected.

The maximum length of the CP string extension is 10 metres, which means that the extension modules can be mounted directly on-site. All of the required electrical signals are transmitted via the CP cable, which in turn means that no further installation is needed on the extension module.

### One CP string offers:

- 32 input signals
- 32 output signals for output modules 24 V DC or solenoid coils
- Logic and sensor supply for the input modules
- Load voltage supply for the valve terminals
- Logic supply for the output module

➔ Internet: ctec

## Solenoid valve with switching position sensing, width 18 mm, 26 mm

The single solenoid 5/2-way valve with spring return features switching position sensing. The normal position of the piston spool valve is monitored.

Designed as plug-in or individual connection valve with pilot valves to ISO 15218 and square plug type C. This valve is not a safety component in accordance with the Machinery Directive 2006/42/EC.

It is suitable for use in safety-related parts of control systems to EN ISO 13849-1.

➔ Page 96

# Valve terminals VTSA/VTSA-F

Key features – Valves

## Control block with safety function, width 26 mm

5/2-way solenoid valve  
These valves are used for special applications, for example for:

- Protecting against unexpected start-up
- Safe reversing
- Drives in manually loaded devices

This control block is suitable for use as a press safety valve to EN 962.

This valve is a safety component in accordance with the Machinery Directive 2006/42/EC.

→ Page 103

## Pilot air switching valve, width 18 mm, 26 mm

The pilot air switching valve is a combination of a 5/2-way solenoid valve with switching position sensing and the intermediate plate VABF-S4-...-S. It enables verifiable switching on and off (sensor function) of the pilot air supply from duct 1 to 14 for the entire

pressure zone or valve terminal. The piston position sensing feature is realised by means of an inductive PNP proximity sensor with cable and push-in connector in the size M12x1 to EN 61076-2-104.

accordance with the Machinery Directive 2006/42/EC. It is suitable for use in safety-related parts of control systems to EN ISO 13849-1.

This valve is not a safety component in

→ Page 109

Note

The pilot air switching valve can only be operated on the valve terminal VTSA/VTSA-F in combination with a right-hand end plate for external

pilot air type VABE-S6-1RZ- ... Port 14 on the right-hand end plate must be sealed for this.

## Soft-start valve, module width 43 mm

The soft-start valve is separately electrically actuated, independently of the multi-pin plug, AS-interface or field-bus connection, via a 4-pin plug to ISO 15407-1 or optionally via an M12 adapter.

The valve can optionally be ordered

with a sensor that monitors switching of the soft-start valve. The soft-start valve can supply the valve terminal or one or more pressure zones with supply air.

The optimum pressure build-up and filling time required by the application

for each pressure zone is configured directly on the valve terminal. A maximum of 5 soft-start valves can be integrated on one valve terminal in this way.

→ Page 117

## 5/3-way solenoid valve for special functions

For holding, blocking a movement (mechanically)

5/3-way solenoid valve for special functions; port 2 is pressurised, port 4 exhausted. Switching position 14 features a memory function.

Possible applications:

- Using lifting cylinders
- Using rotary cylinders

For pressureless switching, self-holding, pneumatic operation

5/3-way solenoid valve for special functions (3 phases). Mid-position is exhausted. Switching position 14 features a memory function.

Possible applications:

- Pneumatic manual clamps for devices (inserting stations)

# Valve terminals VTSA/VTSA-F

Peripherals

## Modular pneumatic peripherals

The modular design of the valve terminal VTSA/VTSA-F enables maximum flexibility right from the planning stage and offers maximum ease of service in operation.

The system consists of manifold sub-bases and valves. The manifold sub-bases are screwed together and thus form the support system for the valves.

Inside the manifold sub-bases are the connection ducts for supplying compressed air to and venting from the valves on the terminal as well as the working lines for the pneumatic cylinders for each valve.

Each manifold sub-base is connected to the next using four screws. Individual valve terminal sections can be isolated and further blocks easily inserted by loosening these screws. This ensures that the valve terminal can be rapidly and reliably extended.

## Basic system modularity

## Valve modularity

## Vertical stacking modularity

-  - Note  
 See also "Adaptation to width 65 mm, ISO size 3" (technology type 04)"  
 → Page 124

# Valve terminals VTSA/VTSA-F

Peripherals

## Modular electrical peripherals

The manner in which the valves are actuated differs according to whether you are using a multi-pin terminal or fieldbus terminal.

The VTSA/VTSA-F with CPX interface is based on the internal bus system of the CPX and uses this communication system for all solenoid coils and a range of electrical input and output functions.

Parallel linking enables the following:

- Transmission of switching information
- Compact design
- Position-based diagnostics
- Separate voltage supply for valves
- Flexible conversion without address shifting
- Option of CP interface
- CPX-FEC as stand-alone controller with access via Ethernet and web server
- Transmission of status, parameter and diagnostic data
  - ➔ Internet: cpx

## VTSA/VTSA-F with electrical peripherals CPX

## Modularity with electrical peripherals CPX

## CPX terminal in metal design

The mechanical connection between the CPX modules in metal design is created using special angled fittings. The CPX terminal can thus be expanded at any time.

### Note

The CPX manifold blocks are also available in a metal design. This means a complete solution in a sturdy metal design can be selected for applications of the valve terminal VTSA/VTSA-F in welding environments.

Peripherals – Pneumatic components

FESTO

## Individual sub-base, width 18 mm, ISO 15407-2

Order code:

- Using individual part numbers

Individual sub-bases can be equipped with any valve.

The electrical connection is established via a standardised 4-pin M12 plug (EN 61076-2-101) or it can be

configured by the user via a 4-pin clamped terminal connection/open cable end.

### Width 18 mm with spring-loaded terminal or cable (open end)

Peripherals – Pneumatic components

## Valve terminal widths

Order code for VTSA:

- 44E... for the electrical components
- 44P... for the pneumatic components

Order code for VTSA-F:

- 45E... for the electrical components
- 45P... for the pneumatic components

Regardless of the type of actuation (e.g. multi-pin plug, fieldbus, etc.), valve terminals VTSA/VTSA-F in the widths

- 18 mm
- 26 mm
- 42 mm
- 52 mm

can be combined without adapters. This enables a flow range of 400 l/min to 2,900 l/min in the case of VTSA and 700 l/min to 2,900 l/min in the case of VTSA-F to be covered on one valve terminal. A wide range of valve functions and vertical stacking components are available for all widths.

Valves with a width of 65 mm can be mixed with other widths. However, these are only configured after the adapter plate VABA and are thus always at the end of the valve terminal configuration.

See “Adaptation to width 65 mm, ISO size 3 (technology type 04)”

→ Page 124

- 44E... for the electrical components
- 44P... for the pneumatic components

Order code for VTSA-F:

- 45E... for the electrical components
- 45P... for the pneumatic components

Valve terminals VTSA/VTSA-F with individual electrical connection can be expanded with up to 20 valves with max. 20 solenoid coils.

The manifold sub-bases for valves with a width of 18 or 26 mm are either prepared for

- 2 single solenoid valves or
- 2 double solenoid valves

and the manifold sub-bases for valves with a width of 42, 52 and 65 mm are prepared for

- 1 single solenoid valve or
- 1 double solenoid valve.

- Double solenoid valve positions can be equipped with any valve or a blanking plate.
- Single solenoid valve positions can only be equipped with single solenoid valves or a blanking plate.
- The electrical connection is established via a 5-pin M12 plug (24 V DC).

- Valves with a width of 65 mm cannot be mixed with other widths – these are always at the end of the valve terminal configuration. See “Adaptation to width 65 mm, ISO size 3 (technology type 04)”

Peripherals – Electrical components

## Valve terminal with electrical multi-pin plug connection

Order code for VTSA:

- 44E... for the electrical components
- 44P... for the pneumatic components

Order code for VTSA-F:

- 45E... for the electrical components
- 45P... for the pneumatic components

Valve terminals VTSA/VTSA-F with multi-pin plug connection can be expanded with up to 32 valves with max. 32 solenoid coils. The manifold sub-bases for valves with a width of 18 or 26 mm are prepared for

- 2 single solenoid valves or
- 2 double solenoid valves

and the manifold sub-bases for valves with a width of 42, 52 and 65 mm are prepared for

- 1 single solenoid valve or
- 1 double solenoid valve.

- Double solenoid valve positions can be equipped with any valve or a blanking plate.
- Single solenoid valve positions can only be equipped with single solenoid valves or a blanking plate.
- The following multi-pin plug connections to IP65 are available:
  - 37-pin Sub-D connection (24 V DC): the connecting cable can be ordered in lengths of 2.5 m, 5 m and 10 m for max. 8, 22 or 32 solenoid coils respectively.

- Terminal strip (24 V DC or 110 V AC) 19-pin round plug connector (24 V DC)
- Valves with a width of 65 mm cannot be mixed with other widths – these are always at the end of the valve terminal configuration. See “Adaptation to width 65 mm, ISO size 3 (technology type 04)”

Peripherals – Electrical components

## Valve terminal with AS-interface connection

Order code for VTSA:

- 52E... for the electrical components
- 44P... for the pneumatic components

Order code for VTSA-F:

- 52E... for the electrical components
- 45P... for the pneumatic components

Valve terminals VTSA/VTSA-F with AS-interface connection can be expanded with up to 8 valves with max. 8 solenoid coils.

The manifold sub-bases for valves with a width of 18 or 26 mm are either prepared for

- 2 single solenoid valves or
- 2 double solenoid valves

and the manifold sub-bases for valves with a width of 42, 52 and 65 mm are prepared for

- 1 single solenoid valve or
- 1 double solenoid valve.

- Double solenoid valve positions can be equipped with any valve or a blanking plate.
- Single solenoid valve positions can only be equipped with single solenoid valves or a blanking plate.

- Valves with a width of 65 mm cannot be mixed with other widths – these are always at the end of the valve terminal configuration. See “Adaptation to width 65 mm, ISO size 3 (technology type 04)”

→ Page 124

	Brief description	→ Page/Internet

Peripherals – Electrical components

## Valve terminal with fieldbus connection, control block (electrical peripherals CPX)

Order code:

- 50E-... for the electrical peripherals, plastic manifold module
- 51E-... for the electrical peripherals, metal manifold module
- 53E-... for the electrical peripherals, for control cabinet installation

For VTSA:

- 44P-... for the pneumatic components

For VTSA-F:

- 45P-... for the pneumatic components

Valve terminals VTSA/VTSA-F with fieldbus interface can be expanded with up to 32 valves with max. 32 solenoid coils.

The manifold sub-bases for valves with a width of 18 or 26 mm are either prepared for

- 2 single solenoid valves or
  - 2 double solenoid valves
- and the manifold sub-bases for valves with a width of 42, 52 and 65 mm are prepared for
- 1 single solenoid valve or
  - 1 double solenoid valve.

- Double solenoid valve positions can be equipped with any valve or a blanking plate.
- Single solenoid valve positions can only be equipped with single solenoid valves or a blanking plate.

Each valve position can be equipped with any valve or a blanking plate. The rules for CPX apply to the equipment that can be used in combination with the electrical peripherals CPX.

In general:

- Max. 10 electrical modules
- Digital inputs/outputs
- Analogue inputs/outputs

- Parameterisation of inputs and outputs
- Integrated convenient diagnostic system
- Preventive maintenance concepts

- Valves with a width of 65 mm cannot be mixed with other widths – these are always at the end of the valve terminal configuration. See “Adaptation to width 65 mm, ISO size 3 (technology type 04)”

Peripherals – Electrical components

## Valve terminal with fieldbus/multi-pin plug connection and individually electrically actuated valve

In applications with specific emergency stop conditions, it may be necessary to switch one or more valves separately from the valve terminal controller. Standard valves (VSVA) with individual electrical connection (round or square plug) are mounted on the

valve terminal to this end.

In order for protection class IP65 to be achieved, the functionless opening in the sub-base for the electrical connection must be sealed.

A sealing cap is available for the 18 mm and 26 mm widths. With

manifold or individual sub-bases, valves with width 42 mm and 52 mm must be used with a seal to comply with the IP protection class (see → page 92).

For central control of the valve terminal via a multi-pin plug or fieldbus

connection, the valve position occupied in this way acts like a vacant position, i.e. the assigned address in the fieldbus node or the corresponding connection in the multi-pin plug connection is occupied.

	Brief description	→ Page/Internet	
1	Sealing cap	For sealing the electrical connection on the sub-base	92
2	Valve	Width 18 mm or width 26 mm	valves vsva
3	Connecting cable	–	valves vsva
4	Seal	For ensuring the IP protection class (with width 42 mm and 52 mm)	92
5	Valve	Width 42 mm or width 52 mm	valves vsva

 Note

Standard valves VSVA can be used for valve terminal allocation. A vacant position must be provided for this in the valve terminal configurator.

The corresponding standard valve VSVA can be ordered on the Internet at:  
→ vsva

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Manifold sub-base

VTSA/VTSA-F is based on a modular system which consists of manifold sub-bases and valves. Manifold sub-bases are available for valve widths 18 mm and 26 mm in a double grid, i.e. two valves per manifold sub-base. For valves with a width of 42 mm or 52 mm, there are manifold sub-bases with one valve per sub-base. The manifold sub-base contains a duct seal and an electrical interlinking

module. They can be freely mixed within a valve terminal. The manifold sub-bases are screwed together and thus form the support system for the valves. Inside the manifold sub-bases are the connection ducts for supplying compressed air to and venting from the valves on the terminal as well as the working lines for the pneumatic cylinders for each valve. Each manifold sub-base is connected to the

next using four screws. Individual valve terminal sections can be isolated and further manifold sub-bases inserted by loosening these screws. This ensures that the valve terminal can be rapidly and reliably extended.

FESTO

## Sub-base valve

All valves are fitted with piston spool and patented sealing system, which ensures efficient sealing, a broad operating pressure range and long service life.

Sub-base valves can be quickly replaced since the tubing connections remain on the sub-base. Irrespective of the valve function

there are sub-base valves with one solenoid coil (single solenoid) or with two solenoid coils for double solenoid or double valve functions.

## Reverse/vacuum operation

Select reverse operation (code Z) if you wish to operate an actuator (cylinder) with different pressures for the forward and return stroke. Please

note that the valves must then be operated via a separate pressure zone.

The reversible 3/2-way solenoid valves are also suitable for vacuum operation. Reverse operation is only possible in

pressure zones with external pilot air supply (the valve terminal can be supplied with internal pilot air supply).

## Blanking plate

Plate without valve function for reserving valve positions on a valve terminal.

Valves and blanking plates are attached to the manifold sub-base using screws.

## Design

### Valve replacement

The valves are attached to the metal manifold sub-base using two or four screws, which means that they can be

easily replaced. The mechanical robustness of the manifold sub-base guarantees efficient long-term sealing.

### Expansion

Vacant positions can be fitted with valves at a later date. The dimensions, mounting points and existing pneumatic installations remain unchanged during this process.

For more information and technical data on expansion, refer to the manual:

-  - Note  
 A filter must be installed upstream of valves operated in vacuum mode. This prevents any foreign matter in the intake air getting into the valve (e.g. when operating a suction cup).

- 1) If neither solenoid coil is energised, the valve moves to its mid-position by means of a mechanical spring. If the two coils are permanently energised one after the other, the valve remains in the switching position of the coil that was activated first.
- 2) The symbol represents a valve with a proximity sensor with a switching output signal, in the illustration an N/O contact. In accordance with ISO 1219-1, this symbol applies to both N/O contacts as well as N/C contacts. The switching element function of all sensors used here is an N/C contact.

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Vertical stacking

Additional functions can be added to each valve position between the sub-base and the valve. These functions are known as vertical stacking modules and enable special

functioning or control of an individual valve position. Combinations of several valve sizes on one valve terminal are possible.

 Note

Certain combinations are not recommended due to the design of the individual vertical stacking components.

## Vertical stacking components

The following component sequence is recommended for valve positions with vertical stacking:

- 1 Valve VSVA
- 2 Pressure regulator plate
- 3 Flow control plate
- 4 Vertical pressure shut-off plate
- 5 Vertical supply plate
- 6 Manifold sub-base

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Vertical stacking

### Pressure regulator plate

An adjustable pressure regulator can be installed between the sub-base and the valve in order to control the force of the triggered actuator.

This pressure regulator maintains an essentially constant output pressure (secondary side) independent of pressure fluctuations (primary side) and air consumption. Also suitable for valves with symmetrical coil layout (one valve on each side).

Standard version:

- Standard port pattern to ISO 15407-2 or ISO 5599-2
- For supply pressure up to 6 bar or up to 10 bar
- Without pressure gauge (optional)
- Regulator knob with 3 positions (locked, reference position, free running)

#### Note

With the A, B and AB pressure regulators VABF-S...-1-..., the control pressure should not be under 2 bar.

Use the reversible A, B or AB pressure regulators for control pressures under 2 bar.

#### Note

Please note for repeat orders of pressure regulators in sizes 42 mm and 52 mm: The part number imprinted on the regulator plate refers only to the standard equipment.

When reordering pressure regulators with additional features, such as a lockable rotary knob, extended design etc., only use the VABF configurator.  
→ Internet: vabf-s2

## Mode of operation of the pressure regulator plate (P regulator) for port 1; code: ZA, ZAY, ZF, ZFY

This pressure regulator regulates the pressure upstream of the valve in duct 1. Ducts 2 and 4 thus have the same regulated pressure.

During venting, the exhaust flow in the valve is from duct 2 to duct 3 and from duct 4 to duct 5.

## Advantages

- The pressure regulator is not affected by venting, since the pressure is regulated upstream of the valve.
- The pressure regulator can always be adjusted, since the pressure from the valve terminal is always present.

## Application examples

- An equal working pressure is required at working ports 2 and 4.
- A lower working pressure (e.g. 3 bar) than the operating pressure present on the valve terminal (e.g. 8 bar) is required.

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Vertical stacking

Mode of operation of the pressure regulator plate (AB regulator) for ports 2 and 4; code: ZD, ZDY, ZI, ZIY

This pressure regulator regulates the pressure in ducts 2 and 4 after the pressure medium flows through the valve. During venting, the exhaust flow in the valve is from duct 2 to duct 3 and from duct 4 to duct 5 via the pressure regulator.

Example with the following switching position:  
 The supply air flows from duct 1 of the manifold sub-base via the valve to duct 2, it is then regulated and made available at port 2 of the manifold sub-base. At the same time, venting takes place via duct 4 of the manifold sub-base, via the regulator and via the valve into duct 5 of the manifold sub-base.

## Restrictions

- The pressure regulator cannot be adjusted in the exhaust position. For example, the pressure regulator for duct 4 cannot be adjusted when the valve is pressurised in the switching position from duct 1 to duct 2 and vented from duct 4 to duct 5.

## Application examples

- Two different working pressures are required at ports 2 and 4 instead of the valve terminal operating pressure.

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Vertical stacking

Mode of operation of the pressure regulator plate (AB regulator, reversible) for ports 2 and 4, reversible; code: ZE, ZEY, ZJ, ZJY

With this pressure regulator, the supply air (duct 1) is split and routed directly to both pressure regulators. In each case the regulated supply air is present in ducts 3 and 5 on the valve. The valve is thus operated in reversible mode.

This means:

- Duct 3 routes the working pressure to port 2
- Duct 5 routes the working pressure to port 4

Example with the following switching position:

The supply air in duct 1 is split between ducts 3 and 5 in the regulator and flows from here to the valve. In the valve, the supply air is routed to port 2 of the manifold sub-base. The exhaust air is simultaneously routed via duct 4 of the manifold sub-base and via the valve to regulator duct 1, where it is split between ducts 3 and 5 and then expelled via the manifold sub-base.

## Application examples

- Two different pressures are required in ducts 2 and 4 instead of the valve terminal's operating pressure.
- Fast venting is required.
- The pressure regulator must always be adjustable.

Note

- Reversible pressure regulator plates may only be combined with valves that can be operated in reversible mode.
- Valves in valve positions with vertical pressure shut-off plates are operated with internal pilot air supply, even when the valve terminal is operated with external pilot air supply.
- The following combination of reversible valve terminals with vertical stacking components is not permitted:
  - Reversible pressure regulator plates
  - Flow control plates
  - Vertical pressure shut-off plates
  - Vertical supply plates

## Advantages

- Fast cycle times.
- 50% higher exhaust flow rate, as air is not vented via the pressure regulator. The load on the pressure regulator is also reduced.
- No quick exhaust valves are required.
- Operating pressure is always present at the pressure regulator, as the pressure is regulated upstream of the valve, i.e. the regulator can always be adjusted.

## Disadvantages

- 2x 3/2-way solenoid valves (code N, K, H) cannot be used, as pressure is present at ports 3 and 5.
- No practical combination with a flow control plate possible.

1) These functions are available via the pressure regulator configurator VABF-S2 for width 42 mm and 52 mm (ISO 5599-2, ISO 1 and ISO 2) only. Alternatively they can be selected for all four sizes in the valve terminal configurator or via their own order numbers in the chapter Accessories on page 90

2) All variants are only possible for VABF-S2

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Vertical stacking

### Flow control plate

The flow control plate is equipped with two flow control valves on which the exhaust air flow rate at exhaust ports 3 or 5 can be adjusted. This enables the movement of the drive to

be initiated and the desired speed to be set on the valve terminal using the manual override. Ducts 3 and 5 can be adjusted independently of each other.

Note

On reversible valve terminals, supply air flow control takes place in ducts 3 and 5 upstream of the valve.

Code	Type	Width				Description
		18 mm	26 mm	42 mm	52 mm	
X	VABF-S4-...F1B1-C	■	■	■	■	<ul style="list-style-type: none"> <li>Restricts the exhaust air downstream of the valve in ducts 3 and 5</li> </ul>

## Vertical pressure shut-off plate

The vertical pressure shut-off plate is equipped with a switch via which the compressed air supply can be shut off. This enables a solenoid directional control valve or subsequent vertical stacking plate to be replaced without switching off the overall air supply. If the control chain has a redundant

connection, the cycle can continue in the case of a cyclical control system. Following activation of the shut-off, the exhaust air/return air from the cylinder is expelled via the M5 threaded connection in the case of width 18 and 26 mm and via duct 3 in the case of width 42 and 52 mm.

Note

It must be ensured that the operating pressure of the valve terminal lies within the range of the required pilot pressure (i.e. min. 3 bar). When using the end plate with pilot air selector, only the switching position with the code W and U can be used.

Code	Type	Width				Description
		18 mm	26 mm	42 mm	52 mm	
ZT	VABF-S...L1D1-C	■	■	-	-	<ul style="list-style-type: none"> <li>3/2-way solenoid valve for shutting off the operating pressure at the valve position</li> <li>Blocks ducts 1 and 14 for the valve position</li> </ul>
ZT	VABF-S...L1D1-C	-	-	■	■	<ul style="list-style-type: none"> <li>Supplies the valve position with internal pilot air</li> </ul>

## Vertical supply plate

This plate enables a valve to be supplied with individual operating pressure independently of the operating pressure of the valve terminal.

As additional pressure supply for a valve. To supply an additional pressure zone.

Code	Type	Width				Description
		26 mm	18 mm	42 mm	52 mm	
ZU	VABF-S4-...P1A3-...	■	■	■	■	<ul style="list-style-type: none"> <li>Plate with port 11 for supplying individual operating pressure to a valve position</li> </ul>

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Compressed air supply and venting

Right-hand end plate

- Code V
- Internal pilot air supply

Right-hand end plate

- Code X
- External pilot air supply

End plate with pilot air selector

- Code Z, Y, W, U

The valve terminal VTSA/VTSA-F can be supplied with compressed air at one or more points. This is a reliable way of ensuring that all functional components will always offer good performance, even with large-scale extensions. The valve terminal is generally supplied via supply plates (max. 16 per valve terminal) and/or via the right-hand end plate. When using valves with a width of 65 mm, the compressed air can also be supplied and vented using the adapter plate VABA-....

Venting is via silencers or ports for ducted exhaust air on the supply plates and/or on the right-hand end plate.

Right-hand end plate

- Code V1, V3
- Internal pilot air supply

Right-hand end plate

- Code X1, X3
- External pilot air supply

Right-hand end plate (size ISO 3)

- Code V2, for width 65 mm
- Internal pilot air supply

Right-hand end plate (size ISO 3)

- Code X2, for width 65 mm
- External pilot air supply

 Note

Compressed air supply and venting for size ISO 3 is described in a separate chapter on adaptation to width 65 mm (internal/external pilot air is regulated via MUH plate (solenoid valve)).

Port configuration for supply plates

Exhaust port 3/5 separated

- Code K

Port configuration for supply plates

Exhaust port 3/5 common

- Code L

There are two types of supply plates:

- Exhaust port 3/5 common
- Exhaust port 3/5 separated

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Additional compressed air supply/duct separation

Additional supply plates can be used to ensure the compressed air supply for larger valve terminals or to create additional pressure zones.

These can be selected at any point upstream or downstream of the manifold sub-bases.

Supply plates contain the ports:

- Compressed air supply (1)
- Exhaust port (3/5) common or separated

Depending on your order, the exhaust air ducts are either ducted or vented via silencers.

### VTSA/VTSA-F with ducted exhaust air:

With ducted exhaust air, venting can be via a supply plate or a right-hand end plate (code V or X).

If duct separation is required, there are three different options:

- Duct separation 1, 3, 5: code S
- Duct separation 1: code T
- Duct separation 3, 5: code R

If a combination of duct separation (S, T or R) and one or two supply plates is required, the following variants can be selected:

- Supply plate with duct separation on the left-hand side: code SU, TU, RU
- Supply plate with duct separation on the right-hand side: code US, UT, UR
- 2 supply plates with intermediate duct separation: code USU, UTU, URU

Supply plates							
Code	Image	Type	Width				Description
			18 mm	26 mm	42 mm	52 mm	
U		<ul style="list-style-type: none"> <li>• Exhaust port 3/5 common VABF-S6-10-P1A7-G12</li> <li>• Exhaust port 3/5 separated VABF-S6-10-P1A6-G12</li> </ul>	■	■	■	■	Supply plate without duct separation (no R, S or T selected)
SU TU RU			■	■	■	■	Supply plate with duct separation on left, if R, S or T selected
US UT UR			■	■	■	■	Supply plate with duct separation on right, if R, S or T selected
USU UTU URU			■	■	■	■	2 supply plates with duct separation in centre, if R, S or T selected

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Right-hand end plate

Right-hand end plates with different port sizes are available depending on the air rate required.

With the following right-hand end plates, the outlet direction of the ports is aligned with the horizontal stacking direction.

Right-hand end plates with pilot air supply/pilot exhaust air

- Internal pilot air supply: code V, V1, V2 and V3 (ducts 1 and 14 are connected)
- External pilot air supply: code X, X1, X2 and X3, as well as XP1, XP2, XP3 and XS

For end plates with pilot air selector, the outlet direction of the ports is to the front of the valve terminal. This means that all the ports on the valve terminal can be combined in one outlet direction.

The special feature of the end plates with pilot air selector is the selector switch itself, which has four settings for different pilot air supply/pilot exhaust air.

End plates with pilot air selector switch set at the factory for:

- External pilot air supply: selector position 1 (code Z)
- Internal pilot air supply: selector position 2 (code Y)
- External pilot air supply, ducted pilot exhaust air: selector position 3 (code W)
- Internal pilot air supply, ducted pilot exhaust air: selector position 4 (code U)

 Note

- The end plate with pilot air selector must be used in combination with a supply plate.
- The reversible 3/2-way solenoid valves (code P, Q, R) must only be operated in selector position 1 or 2.
- Ducted pilot exhaust air via port 12 is only possible with turned seals on the valve.

## Right-hand end plate, variants

Code	Blanking plug in duct	Pilot air supply	Ducted pilot exhaust air <sup>1)</sup> Position of seal on solenoid valve ("ISO" is visible)	Connecting thread

U	Internal (ducted)	4	■	G $\frac{1}{4}$

1) Pilot exhaust air is ducted on the end plate via port duct 12 and vented (done by turning the seal on the solenoid valve to position "ISO")

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Handling of the seals with ducted/unducted pilot exhaust air

### Unducted pilot exhaust air:

- The seal is visible in the inspection window on control side 14.
- The "ISO" mark is visible on the designation label on the seal surface.

### Ducted pilot exhaust air:

- The seal is visible in the inspection window on control side 12.
- The "ISO" mark is visible on the designation label on the seal surface.

- 1 Designation label
- 2 Inspection window on control side 14 ("ISO" is visible)
- 3 Inspection window on control side 12 ("ISO" is visible)

## Pilot air supply

The port for the pneumatic supply is located on the supply plates or the right-hand end plate.

The ports differ for the following types of pilot air supply:

- Internal
- External

 Note

If a gradual pressure build-up is required in the system by means of a soft-start valve, then external pilot

air should be selected whereby the pilot pressure is already applied at the point of switch-on.

### Internal pilot air supply

Internal pilot air supply can be selected if the working pressure is between 3 and 10 bar.

In this case the pilot air supply is branched from the compressed air supply 1 using an internal connection. Port 14 on the right-hand end plate is sealed with a blanking plug.

### External pilot air supply

If the supply pressure is less than 3 bar, you must operate your valve terminal VTSA/VTSA-F using external pilot air supply.

The pilot air supply is then supplied via port 14 on the right-hand end plate. This is the case even if the valve terminal is operated with different pressure zones.

 Note

When using valves with a width of 65 mm, ISO size 3, the internal/external pilot air supply for the valves with a width of 18 ... 52 mm is provided via the adapter plate VABA-....

The external pilot air supply for the valves with a width of 65 mm is provided via the right-hand end plate IEPR ....

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Creating pressure zones and separating exhaust air

The valve terminal VTSA/VTSA-F offers a number of options for creating pressure zones if different working pressures are required. Pressure zones are created by isolating the internal supply ducts between the manifold sub-bases by means of appropriate duct separation.

Compressed air is supplied and vented via a supply plate. The position of the supply plates and duct separations can be freely selected for VTSA/VTSA-F.

Duct separations are integrated ex-works as per your order. Duct separations can be distinguished by their coding, even when the valve terminal is assembled.

Creating pressure zones							
Code	Separating seal		Width				Description
	Pictorial examples	Coding	18 mm	26 mm	42 mm	52 mm	
T			■	■	■	■	Duct 1 separated
S			■	■	■	■	Ducts 1, 3 and 5 separated
R			■	■	■	■	Ducts 3 and 5 separated

## Examples: Compressed air supply and pilot air supply, right-hand end plate

Internal pilot air supply, silencer/ducted exhaust air

Right-hand end plate: code V and V1

The diagram opposite shows an example of the configuration and connection of the compressed air supply with internal pilot air supply. Port 14 on the right-hand end plate is tightly sealed. At exhaust port 3/5 the air is expelled via the silencer.

Duct separations can optionally be used to create pressure zones.

# Valve terminals VTSA/VTSA-F

Port 14 on the right-hand end plate is equipped with a fitting for this. At exhaust port 3/5 the air is expelled via the silencer. Duct separations can optionally be used to create pressure zones.

**Examples: Compressed air supply and pilot air supply via end plate with pilot air selector**

Internal pilot air supply, ducted exhaust air/silencer

Right-hand end plate: code U

The diagram opposite shows an example of the configuration and connection of the compressed air supply with internal pilot air supply. Port 14 on the right-hand end plate is tightly sealed. At exhaust port 3/5 the air is ducted or expelled via the silencer. The selector switch on the pilot air selector is in position 4. Duct separations can optionally be used to create pressure zones.

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components – Compressed air supply and pressure zones, examples

## Examples: Compressed air supply and pilot air supply via end plate with pilot air selector

External pilot air supply, ducted exhaust air/silencer

Right-hand end plate: code Z

The diagram opposite shows an example of the configuration and connection of the compressed air supply with external pilot air supply. Port 14 on the right-hand end plate is equipped with a fitting for this. Port 12 is sealed with a blanking plug since it is internally connected with port 14. At exhaust port 3/5 the air is ducted or expelled via the silencer. The selector switch on the pilot air selector is in position 1. Duct separations can optionally be used to create pressure zones.

## Examples: Creating pressure zones

VTSA/VTSA-F with CPX terminal

VTSA/VTSA-F facilitates the creation of up to 16 pressure zones (up to 32 pressure zones if only size 1, ISO 5599-2, is fitted). The diagram shows an example of the configuration and connection of three pressure zones using duct separations – with internal pilot air supply.

-  - Note  
 Examples with pressure zones and soft-start valve are described separately in the chapter "Soft-start valve" → Page 120.

# Valve terminals VTSA/VTSA-F

Key features – Assembly

## Valve terminal mounting

Sturdy valve terminal mounting thanks to:

- Through-holes for wall mounting
- Additional mounting brackets
- H-rail mounting

### Wall mounting

- 1 Hole for M6 screw
- 2 Hole for M5 screw
- 3 Hole for H-rail mounting

The valve terminal VTSA/VTSA-F is screwed onto the mounting surface using M6 screws. The mounting holes are located at the following points:

- Multi-pin plug (4 pieces):  
2 each on the multi-pin connection block and the right-hand end plate
- Fieldbus, CPX (6 pieces):  
2 each on the left-hand (CPX) and right-hand (VTSA, VTSA-F) end plate and the pneumatic interface.

 Note

When wall mounting valve terminals with more than five manifold sub-bases, use additional mounting brackets of the type VAME-S6... to prevent damage to the valve terminal.

Mounting brackets can be mounted on pneumatic supply plates and manifold sub-bases.

If using CPX components, see:

➔ Internet: cpx

### H-rail mounting

The valve terminal VTSA/VTSA-F is hooked onto the H-rail (see arrow A). It is then swivelled onto the H-rail and secured in place with the clamping component (see arrow B).

For H-rail mounting of the valve terminal you will need the following VTSA/VTSA-F mounting kit:

- CPX-CPA-BG-NRH
- This permits mounting of the valve terminal on an H-rail to EN 60715. Wall mounting is recommended if more than one vertical stacking element or a long-chain form is required.

### Individual valve mounting

- 1 Vertical mounting holes

The individual sub-base for wall mounting is designed for integration into a system or machine. It is mounted vertically.

# Valve terminals VTSA/VTSA-F

Key features – Display and operation

## Display and operation

Each solenoid coil is allocated an LED which indicates its switching status.

- Indicator 12 shows the switching status of the pilot control for output 2
- Indicator 14 shows the switching status of the pilot control for output 4

### Manual override

The manual override enables the valve to be switched when not electrically actuated or energised.

The valve is switched by pushing the manual override. The set switching status can also be locked by turning the manual override.

Alternatives:

- A cover cap (accessory code N) can be fitted over the manual override to prevent it from being turned. The valve can then only be actuated by pressing it.

- A cover cap (code V) can be fitted over the manual override to prevent it from being accidentally actuated.

## Pneumatic connection and control elements

- 1 Pressure gauge (optional)
- 2 Adjusting knob of optional pressure regulator plate
- 3 Manual override (for each pilot solenoid coil, non-detenting or non-detenting/detenting)
- 4 Optional cover cap for manual override (prevents usage of manual override)
- 5 Optional cover cap for manual override with non-detenting function
- 6 Inscription label holder for valve
- 7 Adjusting screw of optional flow control plate
- 8 Exhaust ports "Valves" (3/5)
- 9 Pilot ports 12 and 14 for supplying the external pilot air
- 10 Inscription label holder for sub-base
- 11 Supply port 1 (operating pressure)
- 12 Working lines 2 and 4, for each valve position

**Note**  
A manually actuated valve (manual override) cannot be reset electrically. Conversely, an electrically actuated valve cannot be reset using the mechanical manual override.

## Electrical connection and display components

- 1 Inscription area and cover for H-rail mounting
- 2 Yellow LEDs: signal status display of the pilot solenoid coils
- 3 Power supply connection
- 4 Earth terminal
- 5 Fieldbus connection (bus-specific)
- 6 Service interface for handheld unit, etc.
- 7 Red LED: common error display for valves

# Valve terminals VTSA/VTSA-F

Key features – Display and operation

## Manual override (MO)

### MO with automatic return (non-detenting)

- 1 Press in the stem of the manual override using a pointed object or screwdriver. Valve is in switching position.
- 2 Remove the pointed object or screwdriver. Spring force pushes the stem of the manual override back. Valve returns to initial position (not with double solenoid valve code J).

### MO with detent (covered)

- 1 Press in the stem of the manual override using a pointed object or screwdriver until the valve switches and then turn the stem clockwise by 90° until the stop is reached. Valve remains in switching position.
- 2 Turn the stem anti-clockwise by 90° until the stop is reached and then remove the pointed object or screwdriver. Spring force pushes the stem of the manual override back. Valve returns to initial position (not with double solenoid valve code J and D).

## Identification system

Inscription label holders can be applied to the valves and manifold sub-bases to identify them. These inscription label holders can be ordered by entering the code B or T in the order code for accessories. Scope of delivery: inscription label holder including inscription label. The following inscription labels can be used as spares:

- Inscription label holder for valve type ASCF-T-S6: Part No. 540888

- Inscription label holder for manifold sub-base type ASCF-M-S6: Part No. 540889
  - Inscription label holder for manifold sub-base (for valve width 52 mm) type ASCF-M-S2-2: Part No. 562577
- Large inscription labels can be attached to the pneumatic interface as an alternative or in addition to the smaller labels.

# Valve terminals VTSA/VTSA-F

Key features – Electrical components

## Protective circuit

Each VSVA solenoid coil is protected with a spark arresting protective circuit as well as against polarity reversal.

The 24 V DC version of width 52 mm additionally features integrated holding current reduction.

### 24 V DC version (width 18 to 42 mm)

### 110 V AC version (width 18 to 52 mm)

### 24 V DC version (width 52 mm)

## Individual valve

Valves can also be used on individual sub-bases for actuators further away from the valve terminal.

- Electrical connection M12, 4-pin, 24 V DC
- 4-pin clamped terminal connection for configuration by the user 24 V DC or 110 V AC
- Cable (open end) for configuration by the user 24 V DC or 110 V AC

## Individual electrical connection

A maximum of 20 solenoid coils can be actuated. 2 solenoid coils per valve can be addressed.

Individual electrical connection:

- M12
- 6-way or 10-way
- 5-pin
- 24 V DC

## Valve terminals VTSA/VTSA-F

Key features – Electrical components

### Electrical multi-pin plug connection

The following multi-pin plug connection variants are offered for the valve terminal VTSA/VTSA-F:

- Sub-D multi-pin plug connection (37-pin for 24 V DC): this valve terminal can be equipped with 1 ... 16 valve positions (with double solenoid valves) or with 1 ... 32 valve positions (with single solenoid valves). A maximum of 32 solenoid coils can be actuated.
- Terminal box (terminal strip for 24 V DC or 110 V AC): this valve terminal can be equipped with 1 ... 16 valve positions (with double

solenoid valves), or with 1 ... 32 valve positions (with single solenoid valves). A maximum of 32 solenoid coils can be actuated.

- Multi-pin node (round plug connector): electrical multi-pin plug connection with round plug connector, 19-pin to CNOMO E03.62.530.N, connecting thread M23 for 24 V DC. The valve terminals can be fitted with max. 16 solenoid coils.

The valves are switched by means of positive or negative logic (PNP or

NPN). Mixed operation is not permitted.

Each pin on the multi-pin plug (Sub-D) or terminal box (terminal strip) can actuate exactly one solenoid coil. If the maximum configurable number of valve positions is 32, this means that 32 valves, each with a single solenoid coil, can be addressed. With 16 or fewer valve positions, 2 solenoid coils per valve can be addressed.

Note

Use the following 37-pin connecting cables from Festo to connect the valve terminal VTSA/VTSA-F with Sub-D multi-pin plug connection:

- NEBV-S1W37-...-LE10 for max. 8 solenoid coils
- NEBV-S1W37-...-LE26 for max. 22 solenoid coils
- NEBV-S1W37-...-LE37 for max. 32 solenoid coils
- NECV-S1W37 pre-assembled plug connector

### AS-interface connection

Valve terminals VTSA/VTSA-F with AS-interface connection can be expanded with up to 8 valves with max. 8 solenoid coils.

The valve terminal with AS-interface connection is based on the same electrical manifold module as the

valve terminal with multi-pin plug connection.

This means it is possible to convert a valve terminal with multi-pin plug connection using an AS-interface module.

The technical specifications of the AS-interface system must be observed in this case.

Note

AS-i module VAEM-S6-S-FAS-4-4E. Always operate the AS-i module with additional power supply if 4 solenoid coils (width 52 mm) are simultaneously supplied with current. More information can be found at:

➔ Internet: as-interface

### Fieldbus connection/control block

All functions and features of the electrical peripherals CPX are permitted in connection with the CPX interface. This means:

- The valves and electrical outputs are supplied via the operating voltage connection CPX
- The valves are supplied and switched off independently via a separate port on the CPX

Note

More information can be found at:

➔ Internet: cpx

# Valve terminals VTSA/VTSA-F

Key features – Electrical components

## Rules for addressing

### Address allocation

Address allocation does not depend on whether single or double solenoid valves are fitted.

Addresses are allocated in ascending order without gaps, from left to right.

### Single solenoid valve

A valve position for actuating one solenoid coil (VABV...T1) occupies one address.

### Double solenoid valve

A valve position for actuating two solenoid coils (VABV...T2) occupies two addresses. The following allocation applies in this case:

- Coil 14: lower-value address
- Coil 12: higher-value address

## Pin allocation – Multi-pin plug, Sub-D socket, 24 V DC; electrical connection code MP1

Key features – Electrical components

## Electrical connection, individual valve with connector plug 24 V DC up to width 52 mm

1 Connector plug M12x1, 4-pin to EN 61076-2-101

Pin allocation M12 on individual valve to ISO 20401

With positive logic:

- Pin1 – Unused
- Pin2 –  $U_B$  for coil 12
- Pin3 – 0 V for coil 12 and 14
- Pin4 –  $U_B$  for coil 14

With negative logic:

- Pin1 – Unused
- Pin2 – 0 V for coil 12
- Pin3 –  $U_B$  for coil 12 and 14
- Pin4 – 0 V for coil 14

## Electrical connection, individual valve 24 V DC or 110 V AC up to width 52 mm

Pin allocation for assembly by the user

With positive logic:

- Pin1 – Unused (with 110 V AC connection for earthing)
- Pin2 –  $U_B$  for coil 12
- Pin3 – 0 V for coil 12 and 14
- Pin4 –  $U_B$  for coil 14

With negative logic:

- Pin1 – Unused
- Pin2 – 0 V for coil 12
- Pin3 –  $U_B$  for coil 12 and 14
- Pin4 – 0 V for coil 14

## Individual electrical connection, 6-way or 10-way, 24 V DC, code MP2/MP3 for valve terminal up to width 52 mm

1 Connector plug M12x1, 5-pin

Pin allocation M12

With positive logic:

- Pin1 – Unused
- Pin2 –  $U_B$  for coil 12
- Pin3 – 0 V for coil 12 and 14
- Pin4 –  $U_B$  for coil 14
- Pin5 – Functional earth

Pin allocation M12

With negative logic:

- Pin1 – Unused
- Pin2 – 0 V for coil 12
- Pin3 –  $U_B$  for coil 12 and 14
- Pin4 – 0 V for coil 14
- Pin5 – Functional earth

-  Note

Mixed operation of positive switching (PNP) and negative switching (NPN) control signals is not permitted.

# Valve terminals VTSA/VTSA-F

Instructions for use

FESTO

## System equipment

Operate system equipment with unlubricated compressed air if possible. Festo valves and cylinders are designed so that, if used as designated, they will not require additional lubrication and will still achieve a long service life.

The quality of compressed air downstream of the compressor must correspond to that of unlubricated compressed air. If possible, do not operate all of your system equipment with lubricated compressed air. The lubricators should, where possible, always be installed directly upstream of the actuator used.

Incorrect additional oil and too high an oil content in the compressed air reduce the service life of the valve terminal.

Use Festo special oil OFSW-32 or the alternatives listed in the Festo catalogue (as specified in DIN 51524 HLP32; basic oil viscosity 32 CST at 40 °C).

### Bio-oils

When using bio-oils (oils which are based on synthetic or native ester, e.g. rapeseed oil methyl ester), the maximum residual oil content of 0.1 mg/m<sup>3</sup> must not be exceeded (see ISO 8573-1:2010 Class 2).

### Mineral oils

When using mineral oils (e.g. HLP oils to DIN 51524, parts 1 to 3) or similar oils based on poly-alpha-olefins (PAO), the maximum residual oil content of 5 mg/m<sup>3</sup> must not be exceeded (see ISO 8573-1:2010 Class 4). A higher residual oil content irrespective of the compressor oil cannot be permitted, as the basic lubricant would be flushed out over time.

## Pilot pressure p12/14 as a function of operating pressure p1

For 3/2-way solenoid valves

1 Operating range for valves with external pilot air supply

## Direction of flow of solenoid valves

### Solenoid valves with reversible only flow direction

- These valves must only be operated on pressure zones with reversible supply (3 and 5 with supply pressure 1 as exhaust air) or on a reversible pressure regulator. If necessary create pressure separation zones with duct separation.
- Reversible 3/2-way solenoid valves do not permit the special function "ducted pilot exhaust air"
- Ports 12 and 14 on the end plate variants must be supplied with the same pressure
- Right-hand end plate with pilot air selector: can be realised via position 1 or 2
- Right-hand end plate with threaded connections: 12 and 14 must be supplied with the same pressure level

### Solenoid valves with any flow direction

- Valves with any flow direction such as the 5/2-way solenoid valve, code M, for example, are suitable for vacuum operation (standard valves such as the 2x 2/2-way solenoid valve with code VC, for example, may not be used for vacuum operation).
- An exception is the 2x 2/2-way solenoid valve with code VV, which only allows vacuum operation at ports 3 and 5. The solenoid valve with code VV cannot be combined with other valve functions; a separate pressure zone is required.

## Operating and environmental conditions

Valve function order code	VC	N	K	H	VV	P	Q	R	M	O	J	D	B	G	E	SA	SB
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]																
Note about the operating/pilot medium	Lubricated operation possible (required during subsequent operation)																
Operating pressure [bar]	3 ... 10					-0.9 ... +10											
Operating pressure for valve terminal with internal pilot air supply [bar]	3 ... 10																
Pilot pressure [bar]	3 ... 10																
Noise level LpA [dB(A)]	85																
Ambient temperature [°C]	-5 ... +50																
Temperature of medium [°C]	-5 ... +50																
Storage temperature [°C]	-20 ... +40 (for long-term storage)																
Relative humidity [%]	90																
PWIS criterion	Free of paint-wetting impairment substances																
Certification	BIA (for characteristic SP and/or SN only)																
	C-Tick																
	cULus recognized (OL)																
CE marking (see declaration of conformity)	In accordance with EU Low Voltage Directive (not VTSA/VTSA-F-ASI)																
	In accordance with EU EMC Directive <sup>1)</sup>																

1) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: [www.festo.com](http://www.festo.com) → Support → User documentation.  
If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.

Duty cycle		100%
Protection class		IP65, NEMA 4 (for all types of signal transmission in assembled state)

Electrical data – With CPX terminal		
Power supply for electronics (U <sub>EL/SEN</sub> )		
Operating voltage	[V DC]	24 ±10%
Max. intrinsic current consumption at 24 V DC	[mA]	20
Duty cycle		100%
Load voltage supply for valves (U <sub>val</sub> )		
Operating voltage	[V DC]	24 ±10%
Diagnostic message undervoltage U <sub>OFF</sub> , load voltage outside function range	[V]	21.6 ... 21.5
Protection class		IP65, NEMA 4 (for all types of signal transmission in assembled state)

Materials	
Manifold sub-base	Die-cast aluminium
Valve	Die-cast aluminium, reinforced polyamide
Seals	Nitrile rubber, elastomer (support made of steel)
Supply plate	Die-cast aluminium
Right-hand end plate	Die-cast aluminium
Pneumatic interface for CPX	Die-cast aluminium
Flow control plate	Die-cast aluminium
Pressure regulator plate	Die-cast aluminium, reinforced polyamide
Multi-pin connection block	Die-cast aluminium
Cover for the pneumatic interface and multi-pin plug connection	Reinforced polyamide
Note on materials	RoHS-compliant

Vertical stacking components, width 18 mm

- 1 Solenoid valve with two solenoid coils, width 18 mm
- 3 Flow control plate
- 4 Vertical pressure shut-off plate
- 5 Vertical supply plate
- 6 Manifold sub-base
- 7 90° connection plate

- 1 Solenoid valve with two solenoid coils, width 18 mm
- 2 Pressure regulator plate
- 3 Flow control plate
- 6 Manifold sub-base
- 7 90° connection plate
- 8 Pressure gauge, freely positionable

Vertical stacking components, width 18 mm, with the pressure regulator plate also suitable for valves with symmetrical coil layout

- 1 Solenoid valve with two solenoid coils, width 18 mm
- 2 Pressure regulator plate
- 3 Flow control plate
- 6 Manifold sub-base
- 7 90° connection plate
- 8 Pressure gauge, freely positionable

Technical data – Solenoid valve with switching position sensing

Function<sup>1)</sup>

-  - Flow rate  
up to 1,100 l/min
-  - Valve width  
18 mm  
26 mm
-  - Voltage  
24 V DC
-  - Operating pressure  
3 ... 10 bar

## ISO valves with switching position sensing for safety-oriented pneumatic components

Function

The single solenoid 5/2-way valve with spring return in width 18 mm and 26 mm features valve diagnostics. Designed as plug-in or individual connection valve with pilot valves to ISO 15218 and square plug type C. The normal position of the pis-

ton spool valve is monitored by the inductive sensor. This valve is not a safety component in accordance with the Machinery Directive 2006/42/EC. When used in higher categories, the sensor signal from the valve must be evaluated by the control

system. This valve is suitable for use in safety-related parts of control systems to EN ISO 13849-1. The control block has been developed and manufactured in accordance with the basic and

proven safety principles of EN ISO 13849-2. This valve is designed for installation in machines and automation systems and must only be used in industrial applications (high-demand mode).

## Decentralised individual connection variant

Valve on individual sub-base (square plug or plug-in), with integrated piston position sensing.

The electrical connection is established either via a standardised 4-pin M12 plug 24 V DC (ISO 15407-2), a 4-pin spring-loaded terminal or a cable (open end) 24 V DC/110 V AC,

which are configured by the user. The individual sub-base can be supplied with internal or external pilot air depending on the version.

## Variant for valve terminal VTSA/VTSA-F

The valves with integrated piston position sensing in plug-in design for valve terminal VTSA/VTSA-F can be used regardless of the type of electrical actuation (individual, multi-pin plug or fieldbus/control block connection).

Pilot air supply:  
The valve terminal can be supplied with internal or external pilot air via the various end plate variants.

-  - Note  
Valves in plug-in design always get their pilot air from duct 14 in the manifold sub-base.

1) The circuit symbol represents a valve with a proximity sensor with switching output signal with an N/O contact. In accordance with ISO 1219-1, this symbol applies to both N/O contacts as well as N/C contacts. The switching element function of the sensors used here is designed as an N/C contact.

-  - Note  
Pilot exhaust air port 12 vents directly at the valve, without a connection. If the customer requests a "turned seal", exhaust air is vented at the end plates of the valve terminal, which does not conform to the ISO standard.

 Note

- The sensors contained in the valves must not be replaced. Incorrect assembly can result in malfunctions or damage to the valve. Return the module to Festo for maintenance in the event of a fault.
- Valves with switching position sensing from the VSVA-B-M52-... series can only be ordered individually. If these are used on a valve terminal, appropriate vacant positions must be provided for them. Exceptions are the two valves with ident. code SO and SQ.

## Valve terminals VTSA/VTSA-F

Technical data – Control block with safety function

-  - Flow rate  
on valve terminal:  
830 l/min
-  - Solenoid valve width  
26 mm
-  - Voltage  
24 V DC
-  - Operating pressure  
3 ... 10 bar

### Description

The control block is designed for two-channel actuation of pneumatic drive components such as double-acting linear cylinders, for example, and can be used to realise the following protective measures:

- Protection against unexpected start-up (EN 1037)
- Reversing hazardous movements, provided the reversing motion will not result in further hazards

The control attributes of the control block enable Performance Level e to be achieved for the safety measures. The control block has been developed and manufactured in accordance with the basic and proven safety principles of EN ISO 13849-1 and EN ISO 13849-2.

The requirements of EN ISO 13849-1 and EN ISO 13849-2 (e.g. CCF, DC) must be taken into consideration for implementation and operation of the component and for use in higher categories (2 to 4).

When using this product in machines or systems subject to specific C standards, the requirements specified in these standards must be observed.

The control block with safety function is designed for installation in machines and automation systems and must only be used in industrial applications (high-demand mode). The control block with safety function is suitable for use as a press safety valve to EN 962.

More information and technical data  
→ Internet: manual

### Version for valve terminal VTSA/VTSA-F

The valves with integrated piston position sensing on manifold sub-base for valve terminal VTSA/VTSA-F must be supplied with electrical power regardless of the type of electrical actuation (individual, multi-pin plug or fieldbus/control block connection).

The electrical connection for the solenoid valves is established separately via a standardised square plug to EN 175301-803, type C.

The piston position sensing feature of

the inductive PNP or NPN proximity sensor is realised using a push-in connector in the size M8x1 to EN 61076-2-104.

### - - Note

The control block with safety function (VOFA) is also available as a decentralised individual connection variant with electrical and pneumatic

individual connection.  
For information see:  
→ Internet: vofa

# Valve terminals VTSA/VTSA-F

Technical data – Control block with safety function

## Pneumatic/electrical interlinking

### Function

The safety function is achieved through two-channel pneumatic interlinking of two single solenoid 5/2-way valves within the control block: port (4) is only fed with compressed air if both solenoid valves are switched to switching position (14). Port (2) is always fed with compressed air if at least one of the two solenoid

valves is in normal position. The valve is reset via a mechanical spring.

The switching operation of the solenoid valves can be monitored by sensing via the proximity sensors at the solenoid valves (switching position sensing).

This is done by linking the control

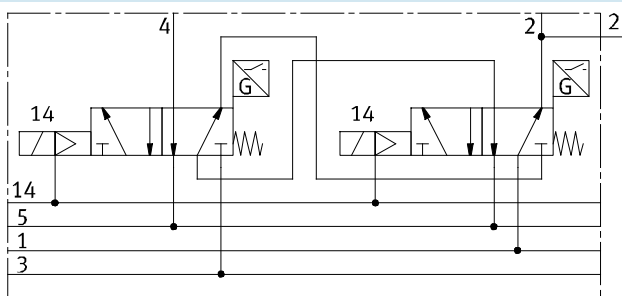

signal and signal change of the proximity sensor so that it is possible to check whether the piston spools of the solenoid valves are reaching or leaving the normal position (expectations).

The piston spools of the solenoid valves are designed so that pneumatic

short circuits between ports (2) and (4) are ruled out (freedom from overlap).

The two solenoid valves must be actuated via two independent channels in order to achieve the desired Category 4 (Performance Level e, to EN ISO 13849-1).

### Circuit symbol<sup>1)</sup>

For the control block with safety function VOFA-B26-T52-... for the valve terminal, there is two-channel pneumatic interlinking of two 5/2-way solenoid

valves, width 26 mm, with the intermediate plate as vertical stacking (output 2 is switched in parallel, output 4 is switched in series).

1) The circuit symbol represents a valve with a proximity sensor with switching output signal with an N/O contact. In accordance with ISO 1219-1, this symbol applies to both N/O contacts as well as N/C contacts. The switching element function of the sensors used here is designed as an N/C contact.

450 l/min (26 mm)
-  Valve width  
18 mm  
26 mm
-  Voltage  
24 V DC
-  Operating pressure  
-0.9 ... 10 bar

## Description

The pilot air switching valve is essentially a combination of a 5/2-way solenoid valve with switching position sensing and the intermediate plate VABF-S4-...-S. It enables verifiable switching on and off (sensor function) of the pilot air supply from duct 1 to 14 for the entire pressure zone or valve terminal.

This valve is not a safety component in accordance with the Machinery Directive 2006/42/EC. When used in higher categories, the sensor signal from the valve must be evaluated by the control system.

This valve is suitable for use in safety-related parts of control systems to EN ISO 13849-1. This valve is designed for installation in machines and automation systems and must

only be used in industrial applications (high-demand mode).  
More information and technical data  
➔ Internet: manual

## Alternative switching position sensing with pressure switch

As an alternative to the sensor function in the solenoid valve, a pressure switch can be mounted (instead of the

blanking plug) in the intermediate plate VABF-S4-...-S. This pressure switch enables verifiable switching on

and off (sensor function) of the pilot air supply. An ISO solenoid valve can therefore be mounted on the interme-

mediate plate without a sensor for the same function.  
➔ Internet: spba

-  Note

The pilot air switching valve can only be operated on the valve terminal VTSA/VTSA-F in combination with a right-hand end plate for external

pilot air type VABE-S6-1RZ-... Port 14 on the right-hand end plate must be sealed for this.

## Vertical stacking variant for valve terminal VTSA/VTSA-F, width 18 mm, 26 mm

The valves with integrated piston position sensing in plug-in design for valve terminal VTSA/VTSA-F can be used regardless of the type of electrical actuation (individual, multi-pin plug or fieldbus/control block connection).

This module is supplied pre-assembled together with the valve terminal VTSA/VTSA-F. No other assembly steps are required before installation. The piston position sensing feature is realised by means of an inductive PNP proximity sensor with cable and

push-in connector in the size M12x1 to EN 61076-2-104.

Alternatively, combinations with the pressure switch in the intermediate plate and ISO solenoid valves are possible.

-  Note

All VSVA solenoid valves to ISO 15407-1 can be used.

➔ Internet: vsva

1) The circuit symbol represents a valve with a proximity sensor with switching output signal with an N/O contact. In accordance with ISO 1219-1, this symbol applies to both N/O contacts as well as N/C contacts. The switching element function of the sensors used here is designed as an N/C contact.

# Valve terminals VTSA/VTSA-F

Technical data – Pilot air switching valve, width 18 mm, 26 mm

## Function – Pneumatic/electrical interlinking

The function for switching off the pilot air is essentially achieved by combining the intermediate plate type VABF-S4-...-S with the single solenoid 5/2-way valve type VSVA-B-M52-MZD-...-1T1L-APX-0,5. The valve terminal is not supplied with any pilot air via the right-hand end plate type VABE-S6-1 (ident. code XS, external pilot air). Port 14 on the end plate is sealed.

The pilot air for the valve is branched from duct (1) in the intermediate plate

and redirected to the pilot air duct (14) of the valve terminal when the valve is in the switching position. Ports (2) and (4) of the manifold sub-base are sealed with blanking plugs.

The switching operation of the solenoid valve can be monitored by sensing via the proximity sensor in the solenoid valve (or pressure switch in the intermediate plate VABF...).

This is done by linking the control signal and signal change of the proximity sensor so that it is possible to check

whether the piston spools of the solenoid valves are reaching or leaving the normal position (expectations).

The piston spool of the solenoid valve is designed so that pneumatic short circuits between ports (2) and (4) are ruled out (freedom from overlap).

Alternatively, combinations with the pressure switch in the intermediate plate and ISO solenoid valves are possible.

A valve from the VTSA/VTSA-F modular system can be planned or configured to the right of the valve

with piston position sensing on the intermediate plate of the pilot air switching valve.

## Pilot air switching valve with integrated piston position sensing

The pilot air switching valve is a combination of a 5/2-way solenoid valve with switching position sensing and the intermediate plate VABF-S4-...-S.

## Alternative switching position sensing with pressure switch

As an alternative to the pilot air switching valve with integrated piston position sensing, a combination of ISO solenoid valve and pressure switch in the intermediate plate is possible.

Various 5/2-way solenoid valves are available in combination with a pressure switch SPBA-... for this purpose.

## Valve terminals VTSA/VTSA-F

Technical data – Soft-start valve, width 43 mm

Function without sensor

with sensor

-  Flow rate  
Pressurisation: 3,000 l/min  
Exhaust: 3,300 l/min
-  Module width  
43 mm
-  Temperature range  
-5 ... +50 °C
-  Operating pressure  
2 ... 12 bar

### Description

#### Function

The purpose of the soft-start valve is to slowly and safely build up the supply pressure in duct 1 of the valve terminal or to quickly vent it. Switch-on takes place in two stages:

- First the working pressure provided for duct 1 gradually increases (the speed can be adjusted using a flow control screw).

- Once the working pressure in duct 1 reaches a previously set value, the soft-start valve switches the full operating pressure at duct 1 of the valve terminal.

The switching point for full operating pressure is set to 4 bar at the factory, but can be changed using an adjusting screw.

The full operating pressure is applied to duct 14 (pilot air) at all times. This pressure causes the valves on the valve terminal to immediately move to the required switching position.

Duct 1 of the valve terminal is exhausted via the soft-start valve's exhaust port only in the normal

position, when the valve is not switched. The exhaust air can optionally be ducted with a QS fitting or using a silencer.

A self-resetting manual override is available for maintenance and service purposes.

#### Diagnostics

The piston position of the soft-start valve can be monitored by a sensor with integrated LED display. This sensor registers whether the valve has

switched and thus whether the valve terminal is being supplied with air. Pressure sensing via a pressure gauge (optional) is also possible.

The soft-start valve can alternatively be ordered with a sensor. Due to the calibration that is required, it is not intended for subsequent retrofitting of

a sensor. Connecting cables with integrated LED display are provided for displaying the signal status.

#### Pilot air supply

The valve terminal can either be supplied with internal pilot air via the soft-start valve or with internal or external pilot air via the various end

plate variants. The type of pilot air supply is determined by the seal of the soft-start valve.

The scope of delivery of the soft-start valve includes both the seal for internal pilot air supply (with hole) and

the seal for external pilot air supply (without hole).

#### Creation of pressure zones with a soft-start valve

The soft-start valve can be used for the pneumatic compressed air supply of the valve terminal or of a pressure zone. The soft-start valve may only be used as the single compressed air supply component on valve terminals with a pressure zone or within a pressure zone.

If a soft-start valve in combination with a right-hand end plate (code XP3) is chosen for a pressure zone, a supply plate with a blanking plug in duct 1 (code W) is required in this pressure zone.

When using a soft-start valve, a supply plate (with blanking plug in duct 1) is generally also required for this pressure zone for removal of the exhaust air (duct 3/5).

A supply plate is not required if the exhaust air (duct 3/5) in a pressure zone with soft-start valve can be removed via the right-hand end plate.

# Valve terminals VTSA/VTSA-F

Technical data – Soft-start valve, width 43 mm

Restrictions			
Compressed air supply	Exhaust air	Pilot air supply	Reverse operation
There must be no other elements supplying compressed air in the pressure zone in which the soft-start valve is being operated.	Exhaust air cannot be expelled via the soft-start valve. If it is being operated in a pressure zone with duct 3/5 separated, an exhaust plate is required.	If internal pilot air supply (duct 14) via the soft-start valve is chosen, there must be no other pilot air supply within the valve terminal.	The soft-start valve is not approved for reverse operation.

- Note

Setting options as well as drawings with descriptions of the components for the soft-start valve can be found in the manual.

The adjusting screws are freely accessible in the built-in state.

# Valve terminals VTSA/VTSA-F

Technical data – Soft-start valve, width 43 mm

## Example 1: Pressure zone with soft-start valve and pilot air supply

Internal, external pilot air supply

### Requirements

- Compressed air supply via soft-start valve
- Right-hand end plate<sup>1)</sup>: blanking plug in duct 1

### For internal pilot air supply:

- Seal (soft-start valve - manifold sub-base) with pilot air supply hole "open" and
- Right-hand end plate: blanking plug in duct 14

### For external pilot air supply:

- Seal (soft-start valve - manifold sub-base) with pilot air supply hole "closed" and
- Pilot air supply via duct 14 in the right-hand end plate

1) With this configuration, a right-hand end plate with pilot air selector is not possible, as it does not allow the removal of exhaust air

## Example 2: Pressure zone with soft-start valve, supply plate and pilot air supply

Internal, external pilot air supply

### Requirements

- Compressed air supply via soft-start valve
- Supply plate: blanking plug in duct 1
- Right-hand end plate: blanking plug in duct 1, 3, 5 or
- Right-hand end plate with pilot air selector

### For internal pilot air supply:

- Seal (soft-start valve - manifold sub-base) with pilot air supply hole "open" and
- Right-hand end plate: blanking plug in duct 14 or
- End plate with coding (position 2, internal pilot air supply)

### For external pilot air supply:

- Seal (soft-start valve - manifold sub-base) with pilot air supply hole "closed" and
- Pilot air supply via duct 14 in the right-hand end plate or
- End plate with coding (position 1, external pilot air supply)

## Description

### Function

The adaptation of valves, regulator and flow control plates of width 65 mm, ISO size 3 in type 04

technology further expands the scope of application of the valve terminal VTSA/VTSA-F:

- 5 valve sizes with pneumatic function integration on a valve terminal VTSA/VTSA-F
- Max. flow rate up to 4,000 l/min.
- Max. 26 solenoid coils of width 65 mm, ISO size 3 can be adapted to the valve terminal VTSA/VTSA-F. The total number of solenoid coils of all widths must not exceed 32.

## Restrictions

### End plate with pilot air selector

If components of ISO size 3 are used, the end plate with pilot air selector is not available for selection.

### Pilot air supply via adapter plate

If no pneumatic components are installed on the left-hand side of the adapter plate (electrical components only), ducts 12 and 14 of the adapter plate must be sealed with blanking plugs.

### Pressure zones

With ISO size 3 a max. of 2 pressure zones are possible.

# Valve terminals VTSA/VTSA-F

Key features – Adaptation to width 65 mm

## Equipment options

Valve functions for width 65 mm, ISO size 3

- 5/2-way valve
  - Single solenoid, pneumatic spring/mechanical spring
  - Double solenoid
  - Double solenoid with dominant signal
- 5/3-way valve
  - Mid-position pressurised
  - Mid-position closed
  - Mid-position exhausted

## Special features

Fieldbus connection/CPX terminal	Multi-pin plug connection	AS-interface	Combinable
<ul style="list-style-type: none"> <li>• Max. 32 valve positions/ max. 32 solenoid coils</li> <li>• Any compressed air supply</li> <li>• Any number of pressure zones</li> </ul>	<ul style="list-style-type: none"> <li>• Max. 32 valve positions/ max. 32 solenoid coils</li> <li>• Parallel modular valve linking</li> <li>• Any compressed air supply</li> <li>• Any number of pressure zones</li> </ul>	<ul style="list-style-type: none"> <li>• 1 to 8 valve positions/max. 8 solenoid coils. Width 65 mm is mounted at the end of the VTSA/VTSA-F configuration via adapter VABA ....</li> </ul>

 Note  
The total number of solenoid coils of all widths must not exceed 32.

## Valve terminal configurator

→ Internet: [www.festo.com](http://www.festo.com)

A valve terminal configurator is available to help you select a suitable VTSA/VTSA-F valve terminal. This makes it much easier to order the right product.

The valve terminals are fully assembled according to your order specification and are individually tested. This reduces assembly and installation time to a minimum.

You order a valve terminal VTSA using the order code:

Ordering system for VTSA  
→ Internet: [vtsa](http://vtsa)

Ordering system for CPX  
→ Internet: [cpx](http://cpx)

You order a valve terminal VTSA-F using the order code:

Ordering system for VTSA-F  
→ Internet: [vtsa-f](http://vtsa-f)

Ordering system for CPX  
→ Internet: [cpx](http://cpx)

 Note  
Please note that despite the basic configuration for ISO size 3 valves

- The manual override is always non-detenting.
- Exhaust air 3/5 of the adapter plate for ISO size 3 is always routed separately.
- There is no option for 90° connection plate, outlet at bottom.
- There is no option for sintered silencers.
- There is no option for pneumatic accessories.

## Overview of modules for width 65 mm, ISO size 3

ISO 5599-2 size 3

Adapter plate

Valve with manifold sub-base

Vertical stacking

End plate

### Pneumatic components

#### Pneumatic modules

- Manifold sub-base for ISO valves
- Size 3: (G1/2) 4,000 l/min

#### Adapter plate

- Pressure supply connection duct 1
- Exhaust connection duct 3/5 (separated)
- External pilot air supply connection (optional) for pneumatic components on the left-hand side

#### Pneumatic modules

- Manifold sub-base for one ISO valve
- Pilot control via intermediate solenoid plate
- ISO size 3

#### Vertical stacking

- Valves
- Flow control plates
- Intermediate pressure regulator plates
- Pressure gauge
- Creation of pressure zones with 10 bar or vacuum (with external pilot air supply only)

Information on valve activation for ISO size 3

- All intermediate solenoid plates feature a non-detenting manual override
- Valve terminals with internal pilot air supply: restricted pressure range
- Valve terminals with external pilot air supply: pressure zones up to 10 bar or vacuum operation possible. In this case, the pilot air supply must be regulated and supplied externally.

#### Additional modules

- Flow control plates: one-way flow control valves can be mounted between the manifold sub-base and the valve so that the speed of travel can be set separately for single and double-acting cylinders
- Pressure regulators: intermediate pressure regulator plates for setting the contact pressure of a cylinder, either separately on duct 1, 2 or 4, or shared by 2 and 4
- Pressure gauge on pressure regulator

#### Flexible compressed air supply

- Compressed air supply via the adapter plate or the right-hand end plate
- With large valve terminals, compressed air can be supplied at both sides

- Creation of pressure zones: maximum of 2 pressure zones, up to 10 bar as well as for vacuum, are possible for all valve sizes. Compressed air supply at both sides is essential in this case
- Regulated external pilot air supply should be used for pressures < 3 bar

#### Options

- Vacant positions for subsequent extensions
- All pneumatic connections can also be supplied with an NPT thread

# Valve terminals VTSA/VTSA-F

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Key features – Pneumatic components

### Adapter plate VABA ...

The adapter plate VABA ... is used for adaptation of valves of width 65 mm ISO size 3 to valve terminal VTSA/VTSA-F. Connections for supply/exhaust air and pilot air supply are

available. The external pilot air used here supplies the valve terminal with valves of width 18 ... 52 mm on the left-hand side of the adapter.

The external pilot air supply for the valves with a width of 65 mm, ISO size 3 is provided via the end plate IEPR ....

### Blanking plates

Blanking plates are used to seal off vacant valve positions. No intermediate solenoid plate is

mounted underneath the blanking plate. This depends on the valve used and must be ordered with the valve if

the terminal is expanded at a later date.

### Valves and pilot control

The valves used are pneumatically actuated standard valves that are controlled by means of an intermediate solenoid plate.

### Valves and flow lines

The selection of pilot air supply is made at the intermediate solenoid plate by configuring two plugs. Air can

be taken from the supply air, or from a separate air supply. A separate pilot air supply is required in principle if

supply pressure is less than 3 bar (including vacuum). In this case it is advisable to restrict

the pilot air supply to max. 10 bar with a suitable regulator.

L		■	Blanking plate

 - Note  
 A filter must be installed upstream of the intake air getting into the valve (e.g. when operating a suction cup). This prevents any foreign matter in

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Vertical stacking for width 65 mm

Additional components can be added to each ISO size 3 valve position between the sub-base (manifold sub-base) and the valve. These functions

are known as vertical stacking modules and enable special functioning or control of an individual valve position.

## Vertical stacking components

- 1 Valve ISO size 3
- 2 Intermediate pressure regulator plate
- 3 Flow control plate
- 4 Intermediate solenoid plate
- 5 Manifold sub-base with port pattern to DIN ISO 5599-2

Note

Certain combinations are not possible due to the design of the individual vertical stacking components.

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Flow control plate, width 65 mm

Intermediate plate with integrated exhaust air flow control valves at ports 3 and 5 for regulating cylinder speed

## Intermediate pressure regulator plate and pressure gauge, for width 65 mm

Intermediate plate with integrated pressure regulator for regulating pressure at

- ports 2 and 4 (B, A)
- port 4 (A)
- port 2 (B)
- port 1 (P)

### Easy pressure adjustment

Pressure gauges can be screwed directly into the intermediate pressure regulator plate to adjust the pressure.

FESTO

## Manifold sub-base for valves, width 65 mm

Adaptation to size 65 mm ISO size 3 is based on a modular system which consists of manifold sub-bases and valves. The manifold sub-bases contain a duct seal and an electrical inter-linking module, are screwed together and thus form the support system for the valves. Inside the manifold

sub-bases are the connection ducts for supplying compressed air to and venting from the valves on the terminal as well as the working lines for the pneumatic cylinders for each valve. Each manifold sub-base is connected to the next using two screws.

Individual valve terminal sections can be isolated and further manifold sub-bases inserted by loosening these screws. This ensures that the valve terminal can be rapidly and reliably extended, even for width 65 mm, ISO size 3.

## Port pattern to ISO 5599-2 of the manifold sub-base for valves with width 65 mm

# Valve terminals VTSA/VTSA-F

Key features – Pneumatic components

## Compressed air supply and venting

Right-hand end plate

The adaptation to width 65 mm, ISO size 3 is supplied with compressed air via the right-hand end plate and/or the adapter plate VABA ....

Venting is via silencers or ports for ducted exhaust air on the adapter plate VABA ... and/or on the right-hand end plate.

The external pilot air supply for the valves with a width of 65 mm, ISO size 3 is provided via the end plate IEPR ....

## Pilot air supply

When using valves with a width of 65 mm, the internal/external pilot air supply for the valves with a width of 18 ... 52 mm is provided via the adapter plate VABA-....

The external pilot air supply for the valves with a width of 65 mm is provided via the right-hand end plate IEPR ....

### Internal pilot air supply

Internal pilot air supply can be selected if the working pressure is between 3 ... 10 bar.

The pilot air supply is then branched from the compressed air supply 1 using an internal connection. Ports 12 and 14 on the right-hand end plate are sealed with a blanking plug.

### External pilot air supply

If the working pressure is not within the range from 3 ... 10 bar, you must operate the valves with a width of 65 mm, ISO size 3 using external pilot air supply. The pilot air supply is then supplied via ports 12 and 14 on the right-hand end plate.

### Note

If a gradual pressure build-up is required in the system by means of an external soft-start valve, then external pilot air should be selected whereby the pilot pressure is already applied at the point of switch-on.

## Creating pressure zones

Different supply pressures are possible in the area containing the valves with a width of 65 mm by installing isolating discs between two connection blocks. When doing this it should

be noted that the isolating disc is inserted into the manifold sub-base from the right. The supply and exhaust is effected on the left-hand side via the adapter plate VABA ... and via the

right end plate. Usually, only duct 1 has to be isolated. In special cases, isolating discs may also be inserted into exhaust ducts 3 and 5.

## Manual override (MO)

MO with automatic return (non-detenting)

- 1 Press in the stem of the manual override using a pointed object or screwdriver. Valve is in switching position.

- 2 Remove the pointed object or screwdriver. Spring force pushes the stem of the manual override back. Valve returns to its initial position (not with double solenoid valve code J, D).

# Valve terminals VTSA/VTSA-F

Key features – Electrical components

## Electrical connection concept

### Replacing the solenoid coil fuse

Each solenoid coil is protected with a (fast-blowing) 0.315 A fuse. These fuses are located behind the cover of

each manifold sub-base on the printed circuit board. Each single solenoid manifold sub-base has one fuse, while

each double solenoid manifold sub-base has two fuses.

Note

Make sure that there is sufficient clearance for maintenance purposes.

### Changing the solenoid coil fuse

- 1 Loosen the fastening screws in the cover
- 2 Carefully remove the fuse from its base.  
Right fuse for valve solenoid 14  
Left fuse for valve solenoid 12

# Valve terminals VTSA/VTSA-F

Key features – Assembly

## Rear side mounting

1 Blind hole for rear side mounting

The rear side of the manifold sub-bases has holes (blind holes) for mounting the valve terminal on machines or metal racks (rear side mounting).

M8 threads need to be cut for this purpose.

## Wall mounting in the area of the adaptation to width 65 mm, ISO size 3

- With screws M8 on the adapter plate and the manifold sub-bases
- Holes (blind holes) on the underside of the manifold sub-bases
- Hole (through-hole) in the adapter plate

 Note

The mounting holes of every second manifold sub-base must be used for the wall mounting of a valve terminal VTSA-ASI in size ISO 3.

## Valve terminals VTSA/VTSA-F

Technical data – Valves on individual sub-base

-  - Flow rate  
 Width 18 mm:  
 up to 600 l/min  
 Width 26 mm:  
 up to 1,200 l/min  
 Width 42 mm:  
 up to 1,500 l/min  
 Width 52 mm:  
 up to 3,400 l/min
  
-  - Valve width  
 to ISO 15407-2  
 • 18 mm  
 • 26 mm  
 to ISO 5599-2  
 • 42 mm (ISO 1)  
 • 52 mm (ISO 2)
  
-  - Voltage  
 24 V DC  
 110 V AC

General technical data					
Design	Piston spool valve				
Sealing principle	Soft				
Actuation type	Electrical				
Type of control	Piloted				
Exhaust function, with flow control	Via individual sub-base				
Lubrication	Lubricated for life				
Type of mounting	Through-hole to ISO 15407-2				
Mounting position	Any				
Manual override	Detenting, non-detenting, covered				
Pneumatic connections – Threaded connection					
Width	18 mm	26 mm	42 mm	52 mm	
Pneumatic connection	Via sub-base				
Supply port	1	G $\frac{1}{8}$	G $\frac{1}{4}$	G $\frac{3}{8}$	G $\frac{1}{2}$
Exhaust port	3/5	G $\frac{1}{8}$	G $\frac{1}{4}$	G $\frac{3}{8}$	G $\frac{1}{2}$
Working port	2/4	G $\frac{1}{8}$	G $\frac{1}{4}$	G $\frac{3}{8}$	G $\frac{1}{2}$
External pilot air supply port	14	M5	G $\frac{1}{8}$	G $\frac{1}{8}$	G $\frac{1}{8}$
Pilot exhaust air port	12	M5	G $\frac{1}{8}$	G $\frac{1}{8}$	G $\frac{1}{8}$

1) Switching position

2) Mid-position

Operating and environmental conditions	
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]
Note about the operating/ pilot medium	Lubricated operation possible (required during subsequent operation)
Operating pressure [bar]	-0.9 ... +10
Ambient temperature [°C]	-5 ... +50
Certification	cULus recognized (OL)
CE marking (see declaration of conformity)	To EU Low Voltage Directive (including variants with round plug M12, VABS-S4...R3-EX2, but not for variants with round plug M12, VABS-S4...R3)
Protection class	IP65, NEMA 4 (for all types of signal transmission in assembled state)

# Valve terminals VTSA/VTSA-F

Technical data – Valves on individual sub-base

Electrical data	
Acceptable current load [A] at 40°C	2 (1 A per coil)
Protection class to EN 60529	IP65, NEMA 4 (for all types of signal transmission in assembled state)
Variants with round plug M12	
Operating voltage range [V DC]	24 ±10% (with variants with round plug M12 VABS-...-R3)
Surge resistance [kV]	0.8
Degree of contamination	3
Duty cycle [%]	100%
Variants with cable connector	
Operating voltage range [V AC]	110 ±10% (50 ... 60 Hz) (with variants with cable and spring-loaded terminal VABS-...-K1/C1)
Surge resistance [kV]	4
Degree of contamination	3
Duty cycle [%]	100%

 - Note  
A cable connector is needed to ensure the IP protection class and to protect against tensile load, twisting and bending.

Materials				
Width	18 mm	26 mm	42 mm	52 mm
Sub-base	Die-cast aluminium			Gravity die-cast aluminium
Valve	Die-cast aluminium, reinforced polyamide			
Seals	Nitrile rubber, elastomer (support made of steel)
