# Modular electrical terminal CPX

**FESTO**

Key features

Installation concept	Electrical components	Assembly	Operation

Installation concept

- Choice of several valve terminal types for different applications:
  - Type 03 MIDI/MAXI
  - Type 12 CPA
  - Type 32 MPA
  - Type 32 MPA/MPA-F
  - Type 33 MPA-F
  - Type 34 MPA-L
- Economical from the smallest configuration up to the maximum number of modules
- Up to 9 electrical input/output modules plus bus nodes and pneumatic interface/electronic modules for valves
- Extensive range of functions and connection options for the electrical modules
- Choice of connection technology for technically and economically optimised connections
- Can be used as a dedicated remote I/O module

Electrical components

- High operating voltage tolerance (±25%)
- Choice of M18, 7/8" or AIDA push-pull connection for power supply
- Open to all fieldbus protocols and Ethernet
- Optional function and technology modules for preprocessing
- IT services and TCP/IP such as remote maintenance, remote diagnostics, web server, text message and e-mail alert
- Digital inputs and outputs, 4-/8-/16-way, optionally available with individual channel diagnostics
- Analogue inputs and outputs, 2-/4-way
- Pressure inputs
- Temperature inputs
- Controllers for pneumatic and electrical axes
- IP65 and IP67 or IP20

Assembly

- Wall or H-rail mounting, also on mobile systems
- Conversions/extensions are possible at any time, individual linking with CPX metal design
- Modular system offering a range of configuration options
- Fully assembled and tested unit
- Lower selection, ordering, assembly and commissioning costs thanks to the central CPX terminal
- Choice of pneumatic components for optimised control loop system design
- Decentralised, subordinate CPI installation system improves cycle times by up to 30%
- Safe and convenient earthing thanks to earthing plate

Operation

- Fast troubleshooting thanks to an extensive selection of LEDs (some of which are multi-coloured) on the bus node and on all I/O modules
- Suitable for direct machine mounting (IP65/IP67) or in a control cabinet with a terminal connection (IP20)
- Supports module and channel-oriented diagnostics
- On-the-spot diagnostics in plain text via handheld device
- Fieldbus/Ethernet remote diagnostics
- Innovative diagnostic support with integrated web server/web monitor or maintenance tool with USB adapter for PC
- Optimised commissioning thanks to parameterisable functions
- Reliability of service with connection blocks and modules that are quick to replace without changing the wiring
Terminal CPX

Key features

Pneumatic variants of the CPX terminal

The electrical CPX terminal is a modular peripheral system for valve terminals.

The system is specifically designed so that the valve terminal can be adapted to suit different applications.

The modular system design lets you configure the number of valves, inputs and additional outputs to suit the application.
### With valve terminal – decentralised

With valve terminal MPA – centralised
### With valve terminal VTSA – centralised

In metal design with valve terminal VTSA – centralised

With valve terminal MIDI/MAXI – centralised

With valve terminal CPA – centralised

Terminal CPX

Key features

Variants of the CPX terminal controller (with fieldbus node, without preprocessing)
Fieldbus node

Different bus nodes are used to integrate the terminal in the control systems of various manufacturers. The CPX terminal can therefore be operated on over 90% of the most commonly used fieldbus systems:
• Profibus DP
• PROFINET
• Interbus

• DeviceNet
• CANopen
• CC-Link

Integration in universal networks based on Ethernet opens up new possibilities. Faster data transmission, real-time capability and above all additional IT services such

as file transfer, web server, web monitor as integrated website in the CPX terminal, text message/e-mail alerts, etc. open up a wide range of synergies.
These include standardised and universal communication technology across all areas, including operating

level, management level and field level in the production environment, with protection to IP65/67.
The following protocols are supported:
• Ethernet/IP
• Modbus/TCP
• PROFINET
• EtherCAT

Fieldbus node

PLC

Fieldbus

• Communication with higher-order controller via fieldbus
• No preprocessing

• Fieldbus protocol dependent on CPX fieldbus node used
• Up to 512 I/Os, depending on the fieldbus node used

Industrial Ethernet fieldbus node

PLC

Industrial Ethernet

IT services:
Web
E-mail
File transfer
• Connection to a higher-order controller directly via Ethernet/IP, Modbus/TCP or ProfiNet
• No preprocessing

• Monitoring via Ethernet and web applications
• Up to 512 I/Os

- ⬛ - Note

Every electrical connection can be combined with an appropriate number of I/O modules and/or pneumatic components, depending on its address capacity.

Likewise, every pneumatic variant of the CPX terminal can be operated with every electrical connection variant.

Terminal CPX

Key features

**Variants of the CPX terminal controller (with preprocessing in the control block)**

Control block

The optional Front End Controllers CPX-FEC and CPX-CEC enable simultaneous access via Ethernet and an integrated web server (in the case of CPX-FEC), in parallel with a fieldbus node, as well as autonomous preprocessing. Access via Modbus/TCP and EasyIP is also possible.

Commissioning, programming and diagnostics using the Festo software tool FST 4.1 with hardware configurator.

With control block in stand-alone mode

CoDeSys/FST

With control block in Festo EasyIP mode

FED

Industrial Ethernet

IT services:
Web
E-mail
File transfer

- Decentralised controller with direct machine mounting
- Interaction options via CPX-MMI or Front End Display (FED)
- Downloading of programs via Ethernet (or via the programming interface)
- Supports full expansion of all CPX peripherals
- More than 300 I/Os

Beneficial application areas:
- Stand-alone individual workstations
- Interlinked, stand-alone sub-systems
- Automation using IT technology
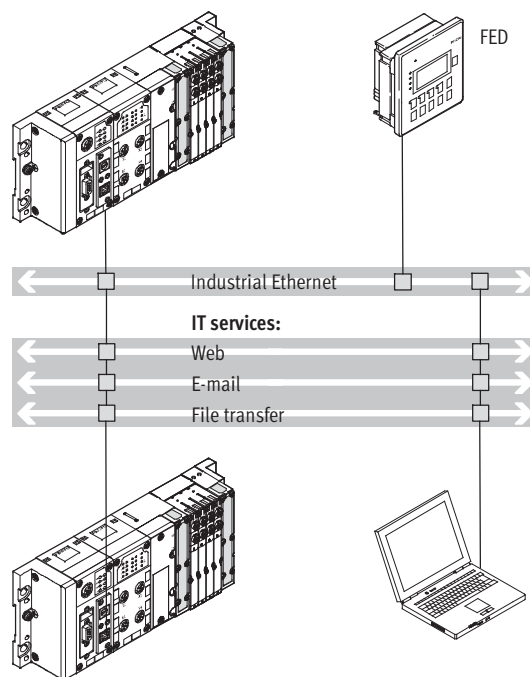

- Fast preprocessing of the CPX peripherals in the control block
- Exchange of any data between the control blocks via EasyIP
- Operation and monitoring of several control blocks via one FED
- Remote diagnostics via an FED and CPX web monitor (only with FST operating system)

- No higher-order controller is required
- More than 300 I/Os per CPX control block

Terminal CPX
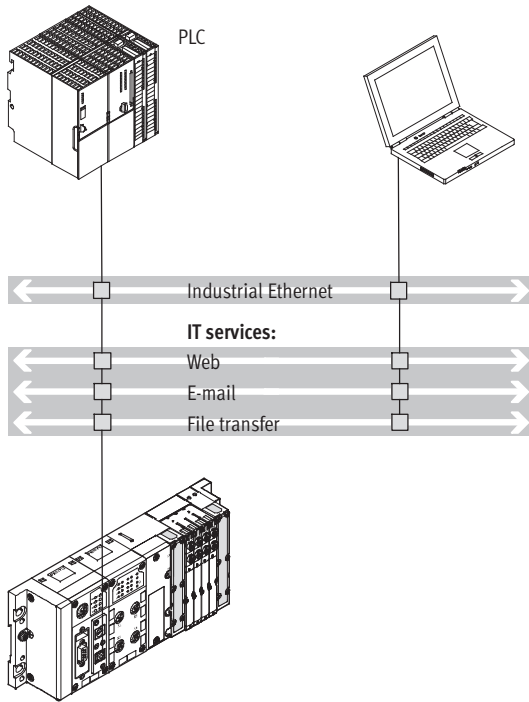

Key features

Variants of the CPX terminal controller (with preprocessing in the control block)

With control block as remote controller on Ethernet

Remote controller on Ethernet as the preprocessing unit for decentralised, stand-alone subsystems using IT technology.

PLC

Industrial Ethernet

**IT services:**
Web
E-mail
File transfer

- Connection to a higher-order controller via Ethernet, no further fieldbus node is required
- Monitoring via Ethernet and web applications

- Preprocessing of the CPX peripherals by CPX control block
- More than 300 I/Os

With control block as remote controller on the fieldbus

Fieldbus remote controller (combination with fieldbus nodes for Interbus, Profibus DP, PROFINET, CANopen, DeviceNet, CC-Link or EtherCAT) as the preprocessing unit for decentralised, stand-alone subsystems.

PLC

Fieldbus

Industrial Ethernet

IT services:
Web
E-mail
File transfer

- Fast preprocessing of the CPX peripherals in the control block
- Communication with higher-order controller via fieldbus
- Optional additional monitoring via Ethernet and web applications

- Downloading of programs via programming interface
- More than 300 I/Os, fieldbus node is only used for communication with the higher-order PLC
- Two fieldbus nodes for redundant communication configuration

→ **Internet: www.festo.com/catalog/...** Subject to change – 2011/06

Terminal CPX

Key features

Variants of the CPX terminal controller (with preprocessing in the control block)
With control block as CANopen fieldbus master

PLC

Industrial Ethernet

IT services:
File transfer

CPX with CEC-C1 as CANopen master

CANopen
Properties:
- Connection to a higher-order controller via Ethernet, no further fieldbus node is required
- Monitoring via Ethernet
- Preprocessing of the CPX peripherals by CPX control block
- More than 300 I/Os
- Up to 128 stations with repeater technology on CANopen

Operating modes:
- Remote controller on Ethernet
- Control block in Festo EasyIP mode

➔ **Internet: www.festo.com/catalog/...**

Terminal CPX

Key features

CPX Web Monitor – Online diagnostics for the CPX terminal ➜ 62

What is a CPX Web Monitor?

The CPX Web Monitor is a software tool from Festo for all CPX modules with integrated web server and Ethernet connection:
• Supplied on CD-ROM
• Installation on PC
• Adaptation to application
• Loading via Ethernet to the web server of the CPX module

What can a CPX Web Monitor do?

The Web Monitor dynamically visualises information about the CPX system and its modules via Ethernet in the browser of a PC:
• Status and diagnostics of the CPX system by modules and channels
• Status of the channels/valves

• Text message or e-mail alerts can be set
• Reading of CPX error memory (fault trace)
• Setting of outputs (force mode)
Three password-protected access levels protect access to the CPX terminal.

How does the CPX Web Monitor communicate?

An IP address is allocated to the integrated web server. Depending on the performance of the connected Ethernet network, the CPX web server can be accessed from any PC.

Controllers or intelligent display and operating units can communicate with the CPX terminal.

What advantages does a CPX Web Monitor offer?

• Expensive servicing is avoided
• Remote maintenance and monitoring of important device functions (counters) for the prevention of unjustified rights of recourse

• Preventive maintenance for reduced downtimes
• No engineering/no development of web applications

CPX Web Monitor – Application examples

Channel-oriented diagnostics

• Channel-specific status and error message of an I/O module
• Plain-text error message about the type of error
• Exact error identified and efficient service visits possible

Possible error messages:
• Short circuit
• Overload
• Open load
• Supply voltage below the tolerance limit

Error memory (fault trace)

Quick access to the last 40 diagnostic results with timestamp.

Assistance in finding sporadic errors and statistical accumulations.

Monitoring of analogue values
• Channel-specific status and error message of an analogue I/O module
• Display in plain text
• Dynamic display of the current values at the inputs/outputs

Possible error messages:
• Open load
• Upper or lower limit value exceeded

Connection of inputs and outputs to the CPX terminal

Digital and analogue CPX I/O modules

Electrical connection

The connection technology for sensors and additional actuators offers a wide range of digital and analogue input and output modules and is freely selectable – as appropriate to your standard or application. Plastic or metal connection blocks can be combined as required:

- Metal design
  - M12-5POL
- Plastic design:
  - M12-5POL
  - M12-5POL with quick lock and metal thread
  - M12-8POL
  - M8-3POL
  - M8-4POL
  - Sub-D
  - Harax®
  - CageClamp®
    (with cover also to IP65/67)

With CPX-CP interface
- Up to 4 strings per CP interface possible
- Up to 4 subordinate CP modules can be combined in one string

- Up to 32 I/Os can be connected per string
- Modules with M8, M12 and terminal connection

- Several CP interface modules can be combined in one CPX terminal (depending on the controller used).

- Combination of centralised CPX I/O modules and decentrally mounted I/O modules of the CPI installation system.

Combined centralised and decentralised electrical connection (valve terminal with CP interface/output module)
- Scalable to different requirements within a system
- One control interface in the system, reduces installation complexity with closely and widely spaced actuators
- Enables an optimum electrical and pneumatic control chain

Terminal CPX

Key features

Connection of inputs and outputs to the CPX terminal

Electrical drives with CPX-CMXX multi-axis interface

- Two axis groups, each with up to four axes, per CPX-CMXX
- 1,024 positioning records possible per axis group

- 2-axis gantries
- 3-axis gantries

Several CP interface modules can be combined in one CPX terminal (depending on the controller used).

Combination of centralised CPX I/O modules and decentrally mounted I/O modules of the CPI installation system.

Electrical drives with CPX-CM-HPP axis interface
- Max. 4 individual electric axes, per CPX-CM-HPP
- No programming required

- Standardised communication with the drives via the Festo Handling and Positioning Profile (FHPP)

- The control component is independent of the fieldbus node used

- Quick configuration and diagnostics via the operator unit CPX-MMI

Connection of inputs and outputs to the CPX terminal
Pneumatic drives with CPX-CMAX/CMPX

CPX-CMAX

- Position and force control, directly actuated or selected from one of 64 configurable positioning profiles.
- Configurable record continuation enables simple functional sequences to be realised.
- The auto-identification function identifies each station with its device data on the controller.

- Actuation of a brake or clamping unit via the proportional directional control valve VPWP.
- Up to 7 modules (max. 7 axes) can be operated in parallel and independently of each other.
- Commissioning via the Festo configuration software FCT or via fieldbus.

CPX-CMPX

- Fast travel between the mechanical end stops of the cylinder, stopping gently and without impact in the end position.
- Fast commissioning via control panel, fieldbus or handheld unit.
- Improved downtime control.
- Actuation of a brake or clamping unit via the proportional directional control valve VPWP.

- Max. 9 end-position controllers can be actuated depending on the fieldbus.
- All system data can be read and written via the fieldbus, including the mid positions, for example.

Ordering

The CPX terminal with valve terminal is fully assembled according to your order specifications and individually tested. The finished valve terminal consists of the electrical peripherals including the desired actuation and the selected components of the VTSA (ISO), VTSA-F, CPA, MPA or MIDI/MAXI modules.

The CPX terminal with valve terminal is ordered using two separate order codes. One order code defines the electrical peripherals type CPX, while the other specifies the pneumatic components of the valve terminal.
The electrical peripherals type CPX can also be configured without a valve terminal and can be used on a fieldbus. For this order, only the order code for the electrical peripherals is required.

The order lists for the pneumatic components can be found on
→ Internet: type 44
  (valve terminal type 44 VTSA)
→ Internet: type 45
  (valve terminal type 45 VTSA-F)
→ Internet: type 12
  (valve terminal type 12 CPA)
→ Internet: type 32
  (valve terminal type 32 MPA)
→ Internet: type 33
  (valve terminal type 33 MPA-F)
→ Internet: type 34
  (valve terminal type 34 MPA-L)
→ Internet: type 03 midi maxi
  (valve terminal VIMP-/VIFB-03)

The order lists for the CP/CPI components can be found on
→ Internet: ctec
  (CPI installation system)

Complete overview of modules

End plate

- Mounting holes for wall mounting
- Functional earth connection
- Special earthing plate for safe and easy connection to the machine bed or H-rail

Bus node

- Fieldbus/Industrial Ethernet connection using various types of connection technology
- Setting of fieldbus parameters via DIL switch
- Display of fieldbus and peripheral equipment status via LED
- PROFINET to AIDA standard in metal housing, fast start-up

Control block

- Preprocessing, stand-alone controller or remote unit CPX-FEC/CPX-CEC
- Connection via Ethernet TCP/IP or Sub-D programming interface
- Setting of operating modes via DIL switch and program selection via rotary switch
- CPX-CMX products for controlling axes

CP interface

- CP interface for decentralised installation systems, thus optimising the pneumatic control loop systems (short tubing lengths/short cycle times)
- Up to 4 strings with up to 4 modules each and up to 32 I/Os in total per string
- Power supply and bus interface via the same cable

Operator unit

- Connection to bus nodes or control block
- Display and modification of parameter settings
- Plain-text display for texts, messages (e.g. individual channel diagnostics, condition monitoring), menus, etc.

Web monitor

- Website integrated in the CPX terminal
- Dynamic status display
- Online diagnostics
- Text message/e-mail alert

Input/output modules

Combination of
- Interlinking block
- Electronics module
- Connection block

Complete overview of modules

Input/output modules

1 Interlinking block

- Internal linking of the power supply and serial communication
- External power supply for the entire system
- Additional power supply for outputs or valves
- Connection accessories for M18, 7/8" or AIDA push-pull
- Plastic version: linking with tie rods
- Metal version: individual linking with M6 screws, individually expandable

2 Electronics module

- Digital inputs for connecting the sensors
- Digital outputs for activating additional actuators
- Analogue inputs
- Temperature inputs (analogue)
- Analogue outputs
- PROFIsafe shut-off module with two digital outputs for shutting off the supply voltage for valves

3 Connection block

- Choice of 8 connection technology variants
- Protection class IP65/IP67 or IP20
- Freely combinable with the electronics modules
- Connection accessories for M8/M12/Sub-D/quick connector
- M8/M12/Sub-D, etc. connecting cables
- Modular system for M8/M12 connecting cables
- M12 connection technology for the metal design

Pneumatic interface

- Actuation of the solenoid coils
- MPA
- MPA-F
- MPA-L
- VTSA/VTSA-F
- MIDI/MAXI
- CPA10/14
- Actuation of pressure sensors
- Actuation of proportional pressure regulators

Terminal CPX

Peripherals overview

Individual overview of modules

Bus node
Bus node for
- Profibus DP
- Interbus
- DeviceNet
- CANopen
- CC-Link
- Ethernet/IP
  (integrated web server)
- PROFINET
  (integrated web server)
- EtherCAT

Control block

CPX-FEC
- Programming with FST
- Ethernet interface
- Modbus/TCP
- EasyIP
- Integrated web server
- Sub-D programming interface

CPX-CEC
- Programming with CoDeSys
- Ethernet interface
- Modbus/TCP
- EasyIP
- CANopen master

CP interface

CP interface
- 4 CP strings
- Max. 4 modules per string
- 32I/32O per string
- CPI functionality

Modules for actuating electric drive units

CPX-CMXX
- Multi-axis interface
- Ethernet interface
- 2 axis groups
  with max. 4 axes per group
- Max. 1,024 positioning records
  per axis group

CPX-CM-HPP
- Axis interface
- Max. 4 individual electric axes
  can be controlled via CAN bus

Modules for actuating pneumatic drive units
CPX-CMAX
- Axis controller
- Position and force control
- 64 configurable positioning profiles
- Auto identification
- Actuation of a brake or clamping
  unit via the proportional directional
  control valve VPWP

CPX-CMPX
- End-position controller
- Fast movement between the mech-
  anical end stops of the cylinder
- Gentle stop in the end position
- Improved downtime control
- Actuation of a brake via the
  proportional directional control
  valve VPWP

CPX-CMIX
- Measuring module
- CAN input (Festo specification)
  for measuring signal
- Sensing of the absolute position
  values or speed values
  of the connected drive

Individual overview of modules

Plastic connection block

Direct machine mounting
(protection class IP65/IP67)
- M8-3POL
- M8-4POL
- M12-5POL
- M12-5POL quick lock,
  metal thread screened
- M12-8POL
- Sub-D
- Quick connector
- Spring-loaded terminal with cover

Protected fitting space
(protection class IP20)
- Spring-loaded terminal

Screening concept
- Optional screening plate
  for connection blocks with M12
 connection technology

Metal connection block

Direct machine mounting
(protection class IP65/IP67)
- M12-5POL

Digital electronics module for inputs/outputs

Digital inputs
- 4 digital inputs
- 8 digital inputs NPN
- 8 digital inputs PNP
- 8 digital inputs PNP with individual
  channel diagnostics
- 16 digital inputs
- 16 digital inputs with individual
  channel diagnostics

Digital outputs
- 4 digital outputs (1 A per channel,
  individual channel diagnostics)
- 8 digital outputs (0.5 A per chan-
  nel, individual channel diagnostics)
- 8 digital outputs (2.1 A/50 W lamp
  load per channel pair, individual
  channel diagnostics)

Multi I/O modules
- 8 digital inputs
  and 8 digital outputs

Analogue electronics module for inputs/outputs
Analogue inputs
- 2 analogue inputs (0 … 10 V DC,
  0 … 20 mA, 4 … 20 mA)
- 4 analogue inputs (0 … 20 mA,
  4 … 20 mA)

Analogue temperature inputs
- 4 analogue inputs for temperature
  measurement (Pt100, Pt200,
  Pt500, Pt1000, Ni100, Ni120,
  Ni500, Ni1000)
- 4 analogue inputs for temperature
  measurement (thermocoupler and
  PT1000 sensor for cold junction
  compensation)

Analogue outputs
- 2 analogue outputs (0 … 10 V DC,
  0 … 20 mA, 4 … 20 mA)

PROFIsafe shut-off module
Digital outputs
- 2 digital outputs (0.5 A/12 W lamp
  load per channel)
- Supply voltage for valves can be
  shut off

Analogue electronics module for pressure inputs

Analogue inputs
- 4 analogue pressure inputs
  (0 … 10 bar, −1 … +1 bar)

Individual overview of modules

Plastic interlinking block – Linking by means of tie rods
System linking
- Different voltage values
  for supplying the modules
- Serial communication between
  the modules

System supply
- M18, 4-pin
- 7/8", 4 or 5-pin

In addition to system linking,
power supply for the
- electronics plus sensors (16 A)
- valves plus actuators (16 A)

Additional power supply
In addition to system linking,
power supply for the
- actuators (16 A per supply)

Power supply for the
- valves (16 A per supply)

Expandability
- Can be expanded by an interlinking
  block with tie rod CPX-ZA-1-E

Metal interlinking block – Individual linking
System linking
- Different voltage values
  for supplying the modules
- Serial communication between
  the modules

System supply
- 7/8", 4 or 5-pin
- AIDA push-pull

In addition to system linking,
power supply for the
- electronics plus sensors (16 A)
- valves plus actuators (16 A)

Additional power supply
In addition to system linking,
power supply for the
- actuators (16 A per supply)

Power supply for the
- valves (16 A per supply)

Expandability
- Can be expanded as required
  by up to 10 interlinking blocks

- Note

Plastic interlinking blocks (tie rods)
and metal interlinking blocks (indi-
vidual linking) cannot be combined
due to their different linking
systems.

- Note

The 7/8" supply is subject
to the following restriction due
to the available accessories:
- 5-pin 8 A
- 4-pin 10 A

Individual overview of modules
| Pneumatic interface MPA | → 191 |

Valve terminal
• MPA1 (360 l/min)
• MPA2 (700 l/min)
• Up to 128 solenoid coils
• Up to 16 modules
  can be configured
• For CPX plastic design
• For CPX metal design
• Actuation of pressure sensors
• Proportional pressure regulators
• Pressure sensors
• Proportional pressure regulators

| Pneumatic interface MPA-L | → 193 |
Valve terminal
• MPA1 (360 l/min)
• Up to 32 solenoid coils
• For CPX plastic design

| Pneumatic interface MPA-F | → 195 |
Valve terminal
• MPAF1 (360 l/min)
• MPAF2 (900 l/min)
• Up to 128 solenoid coils
• Up to 16 modules
  can be configured
• With integrated pressure sensor
  for channel 1
• For CPX plastic design
• For CPX metal design

| Pneumatic interface VTSA/VTSA-F | → 197 |
Valve terminal
• 18 mm: valve flow rate
  up to 700 l/min
• 26 mm: valve flow rate
  up to 1,400 l/min
• 42 mm: valve flow rate
  up to 1,500 l/min
• Max. 32 valve positions/
  max. 32 solenoid coils
• For CPX plastic design
• For CPX metal design

| Pneumatic interface MIDI/MAXI | → 198 |
Valve terminal
• MIDI valves (500 l/min)
  and/or
  MAXI valves (1,250 l/min)
• Up to 26 solenoid coils
• Setting of the number of valves
  via DIL switch
• For CPX plastic design
• For CPX metal design

| Pneumatic interface CPA | → 200 |
Valve terminal
• CPA10 (300 l/min)
• CPA14 (600 l/min)
• Up to 22 solenoid coils
• Setting of the number of valves
  via DIL switch
• For CPX plastic design

End plate for plastic/metal design
End plate
• Left-hand
• Right-hand (for use without valves)

Earthing plate (for end plate for plastic design)
Earthing plate
• For safe and easy connection to the
  machine bed or H-rail, suitable for
  right-hand and left-hand end plate
• Assembly and earthing in a single
  processing step, which means:
  – 50% time saving
  – no additional material required

General basic data and guidelines
Max. 11 modules in total:
- One bus node and/or one control block, freely positionable
- Up to 9 additional input/output modules, freely positionable
- In addition a pneumatic interface, always positioned as the last module on the right-hand side
  - For VTSA, VTSA-F, MPA-L, CPA and MIDI/MAXI: fixed operating range, set using DIL switch
  - For MPA: 16 MPA modules can be configured
  - For MPA-L: fixed operating range, set using rotary switch
- Address capacity max. 512 inputs and 512 outputs, depending on bus node or control block

- One interlinking block with system supply, freely positionable
- Multiple interlinking blocks with additional power supply, always positioned to the right of the interlinking block with system supply
- The connection blocks can, with just a few exceptions, be freely combined with the electronics modules for inputs/outputs, either in metal or plastic (➔ table below)
- All electronics modules for inputs/outputs can be combined with any interlinking block

- Plastic interlinking blocks (tie rods) and metal interlinking blocks (individual linking) cannot be combined due to their different linking systems

Electrical connection – Connection block

CPX-AB-8-M8-3POL with M8-3POL connection

- Compact for pre-assembled individual connection
- 8 sockets
- 3-pin design for connection of 1 channel per socket

- ⎎ - Note

Festo delivers pre-assembled M8/M12 connecting cables (NEBU modular system) on request:
- Tailored to the application
- Perfect fit
- Saves installation

Key features – Assembly

Hood

Description

The CPX hood is a space and cost-saving alternative to a control cabinet. It is designed as an extruded aluminium profile and is installed on a mounting plate.

The valve terminal (CPX with type 32 MPA) is well protected and is quick to install without the need for complex control cabinet installation for cables and tubing. The CPX hood also allows a valve terminal to be installed directly in ATEX zone 2.

The rail and the two mounting brackets are mounted on a back plate. The hood is attached to the retaining rail and secured with two screws. There is also a stand-by position (locking of the hood in the open position).

The hood is locked using two side screws (which meet the requirements for a special lock in compliance with ATEX).

The CPX hood can be ordered online using the valve terminal configurator.

Advantages of the CPX hood

- Impact protection (min. 7 J) for the underlying modules in combination with a suitable mounting plate provided by the user
- Protection against electrostatic discharge through the use of electrically conductive materials and the option of connecting an earth wire
- Protection against accidental interference with live plug connectors (by securing the hood with at least one special lock to EN 600079-0, 9.2 and 20)
- UV protection for the underlying CPX and MPA modules

Points to note when using the CPX hood

- Only in combination with valve terminal type 32 MPA
- No fieldbus nodes with push-pull connection (CPX-M-FB34, CPX-M-FB35)
- CPX power supply via angled plugs, no T-plugs, no push-pull
- Electrical supply plate/additional power supply only possible with angled plug
- No MPA vertical stacking
- Use of larger QS fittings (for tubing O.D. larger than 12 mm) only possible with the angled design
- Ducted exhaust air only with elbow connector
- The permissible ambient temperature of the valve terminal is reduced by 5 °C

- ▯ - Note

The CPX hood has no influence on the IP protection class of the valve terminal or of the CPX terminal.

The CPX hood does not protect against the effects of the weather in installations that are not in closed spaces.

Terminal CPX

Key features – Assembly

FESTO

| **Hood** |
| Assembly |

Procedure:
• Assemble the rail and mounting bracket from the mounting kit
• Attach the earth cable
• Assemble the hood (if applicable, screw together several hood sections before attaching the side pieces)
• Attach and secure the hood

1 Side piece
2 Earth cable
3 Hood section
4 Slot nut with screws, for joining the hood sections
5 Rail
6 Mounting bracket

| Technical data |

Weight:
• Hood: approx. 500 g per 100 mm of length
• Mounting rail: approx. 550 g per 1000 mm of length
• Side pieces: approx. 500 g per side

• Ambient temperature –5 ... +50 °C

• RoHS-compliant
Terminal CPX

Key features – Types of mounting

Mounting options

Valve terminals with CPX terminal support different mounting options for direct machine mounting with high protection and control cabinet installation.

H-rail mounting

The H-rail mounting is formed in the reverse profile of the CPX interlinking blocks. The CPX terminal can be attached to the H-rail using the H-rail mounting kit.

The CPX terminal is mounted on the H-rail (see arrow A) and then swivelled onto the H-rail and secured in place with the clamping component (see arrow B).

The optional earthing plate enables a connection to be established to the machine potential/earth in one easy step.

For H-rail mounting you will need the following mounting kit:
• CPX-CPA-BG-NRH

This facilitates mounting of the CPX on H-rails to EN 60715.

An additional mounting kit is required for combination with valve terminals.

Wall mounting, plastic design

The end plates of the CPX terminal, the valve terminal and the pneumatic interface include mounting holes for wall mounting. Additional mountings for the CPX terminal are available for longer valve terminals. These mountings differ depending on the design of the CPX terminal (plastic or metal).
Wall mounting, metal design

Plastic CPX terminal
Additional mountings

Additional mountings for the CPX terminal that can be fitted between two modules are available for longer valve terminals.

- ▯ - Note

For CPX terminals with 4 or more interlinking blocks: you will require additional mountings of the type CPX-BG-RW-… every 100 or 150 mm. These are pre-assembled when supplied.

Linking with tie rods

The mechanical connection between the CPX modules is created using special tie rods 2. Two screws in the end plates are all that are needed to assemble the entire unit.
The tie rod ensures that the unit resists high mechanical loads and is therefore the "mechanical backbone" of the CPX terminal.

The open design enables the interlinking blocks 1 to be replaced in the assembled state.
The tie rod expansion kit 3 enables an extra module to be added to the CPX terminal.

Metal CPX terminal

Additional mountings
Additional mounting brackets for the CPX terminal that can be screwed onto the interlinking blocks are available for longer valve terminals.

- ▯ - Note

For CPX terminals with 4 or more interlinking blocks: you will require additional mounting brackets of the type CPX-M-BG-RW-… every 100 or 150 mm. These are pre-assembled when supplied.

Linking with screws
The mechanical connection between the CPX modules is created using special angle fittings.
The CPX terminal can thus be expanded at any time.

Power supply concept
General information

$24V_{EL/SEN}$
$0V_{EL/SEN}$
$24V_{OUT}$
$0V_{OUT}$
$24V_{VAL}$
$0V_{VAL}$

The use of decentralised devices on the fieldbus – particularly with high protection for direct machine mounting – demands a flexible power supply concept. A valve terminal with CPX can, in principle, supply all voltages via a single socket.

A distinction is made between supplying the
- electronics plus sensors
- valves plus actuators.

The following connecting threads can be selected:
- M18
- 7/8"
- AIDA push-pull

Interlinking blocks

Interlinking blocks represent the backbone of the CPX terminal with all supply lines. They provide the power supply for the modules used on them as well as their bus connections. Many applications require the CPX terminal to be segmented into voltage zones. This applies in particular to the separate disconnection of solenoid coils and outputs.
The interlinking blocks provide either a space-saving central power supply for the entire CPX terminal or galvanically isolated, all-pin disconnectable potential groups/voltage segments.
Key features – Power supply

Interlinking blocks			
With system supply

- M18
- 7/8", 4-pin

Power supply
- For valves that are connected to the CPX terminal via a pneumatic interface

---

- ⊷ - Note

For 7/8":
- Commercially available accessories are often limited to max. 8 A

- ⊷ - Note

The interlinking block CPX-M-GE-EV-FVO can only be used together with the PROFIsafe shut-off module CPX-FVDA-P.

- ⊷ - Note

Valve terminal type 32 MPA has either a 5-pin 7/8", 4-pin 7/8", 3-pin M18 or 5-pin AIDA push-pull power supply for one or more valve voltage zones. Galvanically isolated, all pins disconnectable with voltage monitoring in the following MPA module.

Diagnostics

System performance

1 Diagnostics via bus interface
2 Undervoltage monitoring
3 Diagnostic overview LED
 – Fieldbus status
 – CPX status
4 Status and diagnostic LED
 for module and I/O channels
5 Module and channel-specific
diagnostics
6 Valve-specific diagnostic module
 and solenoid coils
7 MPA pressure sensor – integrated
 solution on the fieldbus
 – Pre-assembled for ducts 1, 3,
 5 and external pressures

Detailed diagnostic functions are needed in order to quickly locate the causes of errors in the electrical installation and therefore reduce downtimes in production plants.
A basic distinction is made between on-the-spot diagnostics using LEDs or operator unit and diagnostics using a bus interface.

The CPX terminal supports on-the-spot diagnostics via a row of LEDs. This is separate from the connection area and therefore provides good visual access to status and diagnostic information.

Module and channel-specific diagnostics is supported, for example
• Undervoltage detection for outputs and valves
• Short circuit detection for sensors, outputs and valves
• Open-load detection for a missing solenoid coil
• Storage of the last 40 causes of errors with error start and error end

The diagnostic messages can be read out via the bus interface in the higher-order controller and visualised for the central recording and evaluation of error causes. This is done using the individual fieldbus-specific channels. The CPX-FEC and CPX-CEC also offer the option of access via the integrated Ethernet interface (remote maintenance via PC/web applications).

Overview LED on the bus node
1 Fieldbus-specific LEDs
 On each bus node, a maximum of 4 fieldbus-specific LEDs display the fieldbus communication status of the CPX terminal with the higher-order controller.

2 CPX-specific LEDs
 A further 4 CPX-specific LEDs provide non-fieldbus-specific information about the status of the CPX terminal, for example
 – Power system
 – Power load
 – System fault
 – Modification parameters

Input/output module status and diagnostic LEDs
1 Status LEDs for the inputs and outputs
 Each input and output channel is assigned a status LED.

2 Channel-oriented diagnostic LEDs
 Depending on the module design, another diagnostic LED is available for each I/O channel.

3 Group diagnostic LEDs
 An LED displays the group diagnostics for each module.

Diagnostics

Display on the operator unit

1 LCD graphical display for on-site plain-text diagnostics
– Fault location and type
– Without programming

Display on a PC

1 CPX terminal with valve terminal
2 Adapter diagnostic interface to USB
3 Laptop/portable device with USB interface and installed FMT software

– Fault location and type
– Without programming
– Storing the configuration
– Preparing screenshots

Display on Web Monitor

CPX Web Monitor overview

Analogue module, channel-oriented diagnostics
Error memory (fault trace)

The web monitor displays all static and dynamic information on a CPX terminal online via Ethernet – in the web browser of the PC.
This facility is optionally available via Intranet and Internet. Everything is plug & work – without the need for web programming such as HTML or JAVA.

Parameterisation

Changes to the application are often required during commissioning. The parameterisable characteristics of the CPX modules mean that functions can be very easily changed by means of configuration software. This reduces the number of modules needed and, consequently, the amount of storage space required.

It is therefore possible, for example, to reduce the input debounce time for an input module – normally 3 ms – to 0.1 ms on a "fast" input module for faster processes, or to set the response of a valve following a fieldbus interrupt.

Depending on the modules used, parameterisation can be performed via the following interfaces:
• Ethernet
• Fieldbus
• Control block direct interface (programming interface)
• Operator unit CPX-MMI
1 Input debounce time 3 ms
2 Input debounce time 0.1 ms

Terminal CPX

Key features – Addressing

Addressing
General information on addressing

The various CPX modules occupy a different number of I/O addresses within the CPX system. The maximum address space for bus nodes depends on the performance of the fieldbus systems.

Maximum system configuration:
- 1 bus node or control block
- 9 I/O modules
- 1 pneumatic interface (e.g. pneumatic interface MPA with up to 16 MPA manifold sub-bases)

The maximum system configuration can be limited in individual cases by exceeding the address space.

- ⬓ - Note

Please refer to the detailed description of the configuration/addressing rules in the technical data for CPX bus nodes.

CPX-FB23	CC-Link	–	–	64 DI	64 DO	16 AI	16 AO
CPX-FB32	Ethernet/IP	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-FB33	PROFINET RT	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-M-FB34	PROFINET RT	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-M-FB35	PROFINET RT	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-FB38	EtherCAT	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO

- ▯ - Note

The bandwidth of the fieldbus nodes can be restricted by the choice of module and the maximum number of modules.

Example – CPX-FB6 (Interbus)			
	Digital inputs	Digital outputs	Remarks
3x CPX-8DE	24	–	• The address space is occupied by 7 CPX I/O modules plus pneumatic interface • No additional modules can be configured
1x CPX-8DE-8DA	8	8	
2x CPX-2AE	64	–	
1x CPX-2AA	–	32	
3x VMPA1	–	24	
Allocated address space	96	96	

DI = Digital inputs (1 bit)   DO = Digital outputs (1 bit)   AO = Analogue outputs (16 bits)   AI = Analogue inputs (16 bits)

- ⌐⌐ - Module width
50 mm

- ⬙ - Note

The data given here apply to the CPX system. If components that conform to lower values are used in the system, the specification for the entire system is reduced to the values of those components used.

Example

Protection class IP65/IP67 applies only to the fully assembled system with fitted plugs or covers (which must also conform to IP65/67). If components with a lower protection class are used, the protection level of the entire system is reduced to the protection class of the component with the lowest protection level, for example CageClamp connection block with IP20 protection or MPA pneumatics with IP65 protection.

General technical data		
Module No.		**197330**
Max. no. of modules[1]	Control block	1
	Bus node	1
	I/O modules/CP interface/multi-axis interface	9
	Pneumatic interface	1
Max. address capacity	Inputs [byte]	64
	Outputs [byte]	64
Internal cycle time [ms]		< 1
Configuration support		Fieldbus-specific
LED displays	Bus node/control block	Up to 4 LEDs, bus-specific
		4 LEDs, CPX-specific
		• PS = Power system
		• PL = Power load
		• SF = System fault
		• M = Modify parameter/forcing active
	I/O modules	Min. one group diagnostic LED
		Channel-oriented status and diagnostic LED, depending on module
	Pneumatic interface	One group diagnostic LED
		Valve status LED on valve
Diagnostics		• Channel and module-oriented diagnostics for inputs/outputs and valves
		• Detection of module undervoltage for the different voltage potential values
		• Storage of the last 40 errors with timestamp (asynchronous access)

1) A maximum of 11 modules in total can be combined
(e.g. 1 control block + 9 I/O modules + 1 pneumatic interface, or 1 control block + 1 bus node + 8 I/O modules + 1 pneumatic interface)

General technical data			
Module No.			**197330**
Parameterisation			Module-specific and entire system, for example: • Diagnostic behaviour • Condition monitoring • Profile of inputs • Fail-safe response of outputs and valves
Commissioning support			Forcing of inputs and outputs
Protection class to EN 60529			IP65/IP67
Nominal operating voltage		[V DC]	24
Operating voltage range		[V DC]	18 … 30
Current supply	Interlinking block with system supply for electronics plus sensors	[A]	16 (8/10 with 7/8" supply, 5-pin/4-pin)
	actuators plus valves	[A]	16 (8/10 with 7/8" supply, 5-pin/4-pin)
	Additional power supply for actuators	[A]	16 (8/10 with 7/8" supply, 5-pin/4-pin)
	Additional power supply for valves	[A]	16 (10 with 7/8" supply, 4-pin)
Current consumption			Depending on system configuration
Power failure bridging (bus electronics only)		[ms]	10
Power supply connection			M18, 4-pin
			7/8", 5-pin
			7/8", 4-pin
			AIDA push-pull, 5-pin
Fuse concept			Per module with electronic fuses
Tests	Vibration test to DIN/IEC 68/EN 60068 Part 2 – 6		• With wall mounting: Severity level 2 • With H-rail mounting: Severity level 1
	Shock test to DIN/IEC 68/EN 60068 Part 2 – 27		• With wall mounting: Severity level 2 • With H-rail mounting: Severity level 1
PWIS classification			PWIS-free (free of paint-wetting impairment substances)
Interference immunity			EN 61000-6-2 (industry)
Interference emission			EN 61000-6-4 (industry)
Isolation test for galvanically isolated circuits to IEC 1131 Part 2		[V DC]	500
Galvanic isolation of electrical voltages		[V DC]	80
Protection against direct and indirect contact			PELV (Protective Extra-Low Voltage)
Materials			End plates: Die-cast aluminium
Grid dimension		[mm]	50

Operating and environmental conditions		
Module No.		**197330**
Ambient temperature	[°C]	−5 … +50
Storage temperature	[°C]	−20 … +70
Relative air humidity (non-condensing)	[%]	5 … 90
ATEX specification		• II 3D Ex tD A22 IP65 T90°C X • II 3G Ex nA II T4 X
ATEX temperature rating	[°C]	−5 ≤ Ta ≤ +50
CE mark (see declaration of conformity)		In accordance with EU Explosion Protection Directive (ATEX)
Certification		• cULus recognized (OL) • C-Tick

User manuals – General information

Comprehensive user manuals are vital for the fast and reliable use of fieldbus components.
The manuals provided by Festo contain step-by-step instructions for using CPX terminals:
1. Installation
2. Commissioning and parameterisation
3. Diagnostics

Application-oriented explanations are provided for integration of the CPX terminal in the programming and configuration software of the various controller manufacturers. Use the order code to select the language you want.
The manual for the configuration you have ordered is supplied automatically.

The documents can be quickly and easily downloaded from the Festo website.
➔ www.festo.com

Overview – User manuals

Type	Title	Description
Pneumatic components		
P.BE-VTSA-44-...	Valve terminals with VTSA and VTSA-F pneumatics	Instructions on assembly, installation, commissioning and diagnostics of the VTSA and VTSA-F pneumatic components.
P.BE-CPA-...	Valve terminals with CPA pneumatics	Instructions on assembly, installation, commissioning and diagnostics of the CPA pneumatic components.
P.BE-Midi/Maxi-03-...	Valve terminals with MIDI/MAXI pneumatics	Instructions on assembly, installation, commissioning and diagnostics of the MIDI/MAXI pneumatic components.
P.BE-MPA-...	Valve terminals with MPA pneumatics	Instructions on assembly, installation, commissioning and diagnostics of the MPA pneumatic components.
P.BE-MPAF-...	Valve terminals with MPA pneumatics	Instructions on assembly, installation, commissioning and diagnostics of the MPA-F pneumatic components.
P.BE-MPAL-...	Valve terminals with MPA pneumatics	Instructions on assembly, installation, commissioning and diagnostics of the MPA-L pneumatic components.

Overview – User manuals

Type	Title	Description
Electronic components		
P.BE-CPX-SYS-...	System description, installation and commissioning	Overview of the design, components and mode of operation of the CPX terminal; installation and commissioning instructions as well as basic principles of parameterisation
P.BE-CPX-SYS-F-...	PROFIsafe shut-off module	Connection technology and instructions on mounting, installing and commissioning for the PROFIsafe shut-off module of the type CPX-FVDA-P
P.BE-CPX-EA-...	CPX-EA modules, digital	Connection technology and assembly, installation and commissioning instructions for digital input and output modules of the type CPX-... as well as CPA, MIDI/MAXI, VTSA/VTSA-F and MPA pneumatic interface
P.BE-CPX-AX-...	CPX-EA modules, analogue	Connection technology and assembly, installation and commissioning instructions for analogue input and output modules of the type CPX-... as well as pressure sensors and proportional pressure regulators.
P.BE-CPX-CP...	CPX CP interface	Instructions on assembly, installation, commissioning and diagnostics of the CP interface
P.BE-CPX-CMXX...	CPX multi-axis interface	Instructions on assembly, installation, commissioning and diagnostics of the CPX multi-axis interface (CMXX)
P.BE-CPX-CM-HPP...	CPX axis interface	Instructions on assembly, installation, commissioning and diagnostics of the CPX axis interface (CM-HPP)
P.BE-CPX-CMAX-SYS...	CPX axis controller	Instructions on assembly, installation, commissioning and diagnostics of the CPX axis controller (CMAX)
P.BE-CPX-CMAX-CONTROL...	CPX axis controller	Information on controlling, diagnosing and parameterising the axis controller via the fieldbus
P.BE-CPX-CMPX-SYS...	CPX end-position controller	Instructions on assembly, installation, commissioning and diagnostics of the CPX end-position controller (CMPX)
P.BE-CPX-CMIX...	CPX measuring module	Instructions on assembly, installation, commissioning and diagnostics of the CPX measuring module (CMIX)
P.BE-CPX-FB...	CPX fieldbus node	Instructions on assembly, installation, commissioning and diagnostics of the relevant bus nodes
P.BE-CPX-PNIO...	CPX fieldbus node for PROFINET	Instructions on assembly, installation, commissioning and diagnostics of the relevant bus nodes
P.BE-CPX-FEC...	CPX control block	Instructions on assembly, installation, commissioning and diagnostics of the relevant control block
P.BE-CPX-CEC...	CPX CoDeSys controller (control block)	Instructions on assembly, installation, commissioning and diagnostics of the relevant control block
P.BE-CPX-MMI-1-...	Universal handheld type CPX-MMI-1	Instructions on assembly, installation, commissioning and diagnostics of the CPX operator unit

User manuals – GSD, EDS, etc.

Device description files and icons are used to explain the integration of the CPX terminal in the configuration software of the various controller manufacturers.

These can be downloaded quickly and easily from www.festo.com.

FESTO

CPX macro library for ePLAN	
Type	**GSWC-TE-EP-LA**
Part No.	**537041**

Project planning – total service:
ePlan macros for fast and reliable planning of electrical projects in combination with valve terminals. Available in German and English.

Systematically more reliable:
The CPX macro library contains symbols, graphics and master data. Result: a fast, reliable and standardised system for designing and documenting your circuits.

Simply practical:
High level of planning reliability, standardisation of documentation, no need to create symbols, graphics and master data since everything is stored in the CPX macro library.

Design example:

From an idea to a functional solution – quickly and reliably
Project planning, design, production, assembly, commissioning, service

Documentation

Circuit diagrams
Parts lists in paper format, optional representation in browsers (HTML)

Key technical data

- CD with CPX macro library ePLAN 5 and P8 for CPX terminal (supports the planning of bus nodes, interlinking blocks, I/O modules, connection blocks, pneumatic interface and valves)
- Creation and administration of projects

- Creation and editing of circuit diagrams, terminal and cable plans, cross-reference lists, assembly drawings, parts lists and maintenance plans
- Connection to programmable logic controllers
- Generation of the contact and potential cross-references

- Automatic protective contact mirroring
- Generation of documents in paper format and HTML format for viewing in browsers, etc. Library in DXF format for use with AutoCad or other CAD programs

fluidPLAN from ePLAN and FluidDRAW from Festo	

ePLAN and Festo also work together in the creation of pneumatic circuit diagrams:
The ePLAN fluid planning tool has a direct interface to the Festo electronic

catalogue (DKI). All of the relevant data for the parts lists as well as the pneumatic circuit symbols for Festo products are transferred using this import function.

The FluidDRAW software from Festo makes the creation of circuit diagrams

for the pneumatic part on the PC both simple and intuitive.

Terminal CPX

Technical data – Operator unit

- ⌐Γ⌐ - Width
81 mm

The operator unit is a small, convenient commissioning and service device for the CPX terminal. It provides data polling, configuration and diagnostic functions for CPX terminals. Its extremely flexible application range means that data can be read in or out at any location. IP65 compatibility makes it suitable for use in harsh industrial environments.

Application

Functions

- Advance commissioning through the monitoring/forcing of inputs and outputs without fieldbus master/PLC
- Test function for parameter settings, for example fail-safe of the outputs or switch-on delay of the inputs
- Plain-text diagnostics of module and channel-oriented errors
- Condition monitoring: preselection/loading of counters, activation of the channels to be monitored
- Display of the last 40 error occurrences with timestamp
- Identification of sporadic causes of errors through display of the diagnostic history
- Password protection

Connection

The operator unit is connected to the CPX bus nodes or control block, as appropriate, using a pre-assembled M12 cable.
The voltage for the operator unit is supplied by the CPX component
➔ plug & work.

Communication

Once connected to the CPX terminal, the operator unit loads the available configuration for the I/O modules, valves, etc.
This ensures the availability of up-to-date texts, messages, menus and displays.
Status information, diagnostic messages and parameter bits are then exchanged during operation.

Assembly

A mounting bracket for the operator unit offers the option of wall or H-rail mounting.
The mounting bracket also has an option for temporary mounting using a hanging device.

Terminal CPX

Technical data – Operator unit
Connection

The operator unit is connected to the CPX terminal using pre-assembled cables.

Function examples
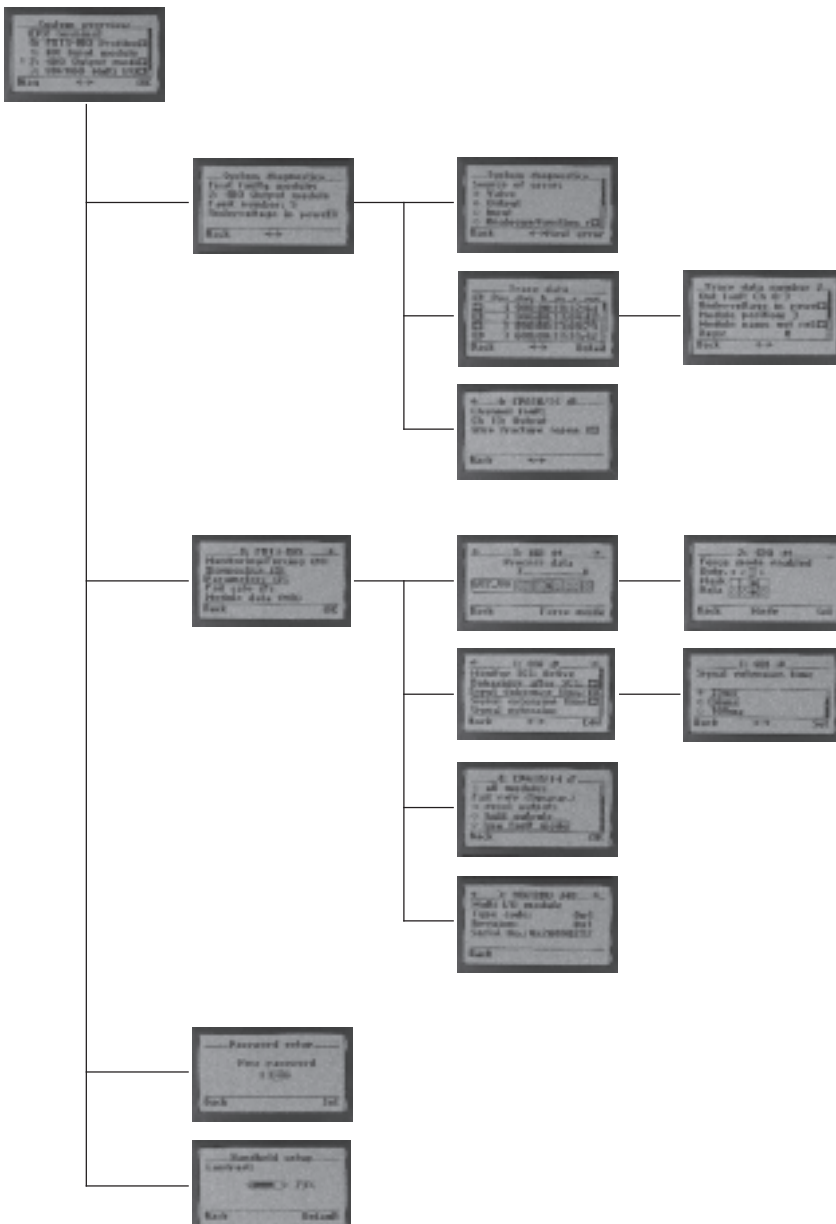

System overview

- Overview of configured modules and current diagnostic messages

Diagnostics

- Fast access to the diagnostic history and the modules with diagnostic messaging
- Display of the last 40 diagnostic messages with timestamp
- Display of the current diagnostic message for a module

Commissioning

- Selection of module-specific data and parameters
- Display and modification of the current status of the inputs and outputs of a module
- Display and modification of the current settings for module-specific parameters

Setup

- Setting of access permission (password)
- Contrast setting of the display

Terminal CPX

Technical data – CPX Maintenance Tool

Function

CPX Maintenance Tool (CPX-FMT) combines service software with a connecting adapter. The service software is a tool for the design, parameterisation and online diagnostics of the CPX terminal. The USB-to-M12 adapter features built-in galvanic isolation (between CPX and PC) and enables a PC to be connected to the diagnostic interface of the CPX terminal.

- Adapter
- Software on CD-ROM

Application	
Only from Festo	

The CPX-FMT software enables access to CPX valve terminals via Ethernet with the control block CPX-FEC and the fieldbus nodes Ethernet IP (FB 32) and ProfiNET (FB 33, FB 34, FB 35). The fieldbus nodes or control block can be connected directly to the PC via a USB adapter from Festo. Similar to the CPX-MMI, diagnostic data such as

the error trace or module diagnostics can be read out and parameters can be modified in plain text. In contrast to the CPX-MMI, the data can be used directly on a PC. There is an option, for example, to send screenshots of a configuration or the current error trace directly via e-mail. In addition, CPX configurations can also be saved

and archived directly as a CPX-FMT project. Undocumented changes can subsequently be identified using the online/offline comparison function. On-site tests such as the actuation of valves or the emulation of sensor feedback (in both cases called "forcing"), for example, can be

performed without an existing controller infrastructure. It must be noted that with both the CPX-FMT and the CPX-MMI, only local parameters on the CPX valve terminal can be changed and saved. The configuration of the networks or controller software cannot be influenced.

General technical data		
Type		**NEFC-M12G5-0.3-U1G5**
System requirements	PC	IBM-compatible
	Drive	CD-ROM
	Interfaces	USB port (specification USB 1.1 or higher)
	Operating system	Microsoft Windows 2000 or XP
Functional range		• Configuration and parameterisation
		• Reading out of system, module, channel diagnostics and error trace
		• Saving of the configuration as a project
		• Integration of plug-ins/links to self-executing programs
Scope of delivery		• Adapter M12, 5-pin to mini USB socket
		• CD-ROM with installation program
Type of mounting		Screw-in
Electrical connection		Plug M12x1, 5-pin
Adapter cable composition		4×0.34 mm^2

Terminal CPX

Technical data – Web Monitor

Function

Web Monitor is a software tool from Festo for CPX modules with integrated web server and Ethernet connection for displaying the CPX service information in real time on a PC connected via a network. This tool provides virtually "free" access to diagnostic and service information, which offers the following benefits:
- Online, up-to-date
- No separate programming
- No separate visualisation

This saves a lot of time and means that there is no need to acquire in-house expertise.

- Supplied on CD-ROM
- Installation on PC
- Adaptation to application
- Loading via Ethernet to the web server of the CPX module
- Display option via touch displays installed on-site (FED 710, 1010, 2010 or 5010)

Application

Only from Festo

CPX is a modular electrical terminal for the connection of pneumatic and electrical control loop systems to automation systems – suitable for all currently used fieldbus systems.

Valve terminals with the comprehensive diagnostic package consisting of pneumatics, electrics and networking systems create unique synergies and

simplify the communication between the electrical and pneumatic control levels. Web Monitor makes this diagnostic and additional information

visible at every station and without extra programming. Convenient error analysis by Web Monitor provides permanent diagnostic reliability.

General technical data		
Type		**CPX-WEB-MONITOR**
System requirements	PC	IBM-compatible, Pentium class or comparable

Technical data – Control block CPX-FEC
| ← Industrial Ethernet → |
| ← Modbus/TCP → |
| ← EasyIP → |

IT services:

| ← Web → |
| ← E-mail → |
| ← File transfer → |

Powerful control block for pre-processing actuation of the CPX modules. The power supply to and communication with other modules takes place via the interlinking block.

In addition to the connection for the Ethernet interface in RJ45 and a programming interface in Sub-D, LEDs are also provided for the bus status, operating status of the PLC and CPX peripherals information, as are switching elements and a diagnostic interface for CPX-MMI and CPX-FMT.

Application

Bus connection

The CPX-FEC is a remote controller that can be connected to a master PLC via the fieldbus nodes of the CPX terminal or via Ethernet. At the same time, it is possible to operate the CPX-FEC as a compact stand-alone controller directly on the machine.

Modbus/TCP (code T05)

Transmits data in binary format within TCP/IP packets. This ensures good data throughput.

Operating modes

- Stand-alone/EasyIP
- Fieldbus remote controller
- Modbus/TCP remote controller
- Remote I/O Modbus/TCP

Communication protocols

- Profibus, PROFINET, DeviceNet, Interbus, CANopen, EtherCAT and CC-Link via CPX fieldbus node
- Modbus/TCP
- EasyIP

- IP
- TCP
- UDP
- SMTP

- HTTP
- DHCP
- BootP
- TFTP

Setting options

CPX-FEC has the following interfaces for monitoring, programming and commissioning:

- For the CPX-MMI/-FMT
- Serial interface RS232, for example, for a Front End Display (FED)
- Ethernet interface for IT applications
- Remote diagnostics via an FED and CPX Web Monitor

The operating mode and fieldbus protocol are set using the DIL switch on the CPX-FEC.

The integrated web server offers a convenient means of querying data saved in the CPX-FEC.

General technical data			
Type			CPX-FEC-1-IE
Ethernet interface			RJ45 (8-pin, socket)
Data interface			RS232 (Sub-D, 9-pin, socket)

The CoDeSys controller is a modern control system for CPX terminals that enables programming with CoDeSys to IEC 61131-3.
- Easy actuation of valve terminal configurations with MPA, VTSA
- Connection to all fieldbuses as a remote controller and for preprocessing
- Actuation of electric drives as individual axes via CANopen (CPX-CEC-C1/-M1)

- Diagnostics with flexible monitoring options for pressure, flow rate, cylinder operating time, air consumption
- Early warnings and visualisation options
- Actuation of decentralised installation systems on the basis of CPI actuation of applications in proportional pneumatics
- Servopneumatic applications
- AS-interface actuation via gateway

Powerful control block for preprocessing actuation of the CPX modules.

The power supply to and communication with other modules takes place via the interlinking block. In addition to the connection for the Ethernet interface in RJ45 and a programming interface in Sub-D, LEDs are also provided for the bus status, operating status of the PLC and CPX peripherals information, as are switching elements and a diagnostic interface for CPX-MMI.

Terminal CPX

Technical data – Bus node CPX-FB6

INTERBUS

Bus node for handling communication between the electrical CPX terminal and a higher-order master via INTERBUS.

The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.

The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.

The fieldbus communication status is displayed via four INTERBUS-specific LEDs.

Application
Bus connection

The bus connection is established via a 9-pin Sub-D socket and a 9-pin Sub-D plug with a typical INTERBUS pin allocation.

The bus connector plugs (with IP65/IP67 protection from Festo or IP20 protection from other manufacturers) facilitate the connection of the incoming and outgoing bus cable.

The outgoing bus plug contains the typical INTERBUS RBST bridge for identification of the outgoing bus connection.

The Sub-D interfaces are designed for controlling network components with a fibre-optic cable connection.

INTERBUS implementation

The CPX-FB6 supports the INTERBUS protocol to EN 50254.

In addition to synchronous I/O exchange, the optional PCP channel can be used for parameterisation and diagnostic functions.

The PCP channel provides access to advanced system information and assigns operation parameters while the controller is running via the user program.

An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.

With its address capacity of 96 inputs and 96 outputs, the CPX-FB6 supports a large number of I/O module configurations, including pneumatic interface.

- Note

If the PCP channel is used, the maximum number of possible process data bits is reduced by 16.

Special points in combination with CPX-FEC/CPX-CEC

When a fieldbus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the fieldbus node only provides the communication interface to the PLC.

Communication between the control block and CPX fieldbus node is

established via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:
- 8 byte outputs
- 8 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:
- 56 byte inputs
- 56 byte outputs

	Housing	Screened	Connection to FE (functional earth)	Housing	
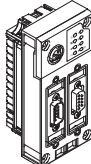

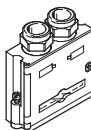

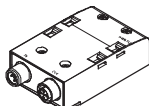

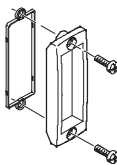

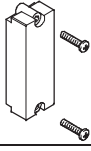

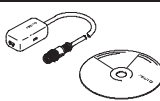

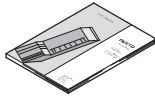

The incoming interface is galvanically isolated from the CPX peripherals. The plug housing is connected to the functional earth FE of the CPX terminal via an R/C combination.

[1] The CPX terminal contains the protocol chip SUPI 3 OPC. This ensures automatic detection of additional connected INTERBUS stations. There is therefore no need for a bridge between pin 5 and pin 9.

Bus node for handling communication between the electrical CPX terminal and a DeviceNet network.
The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.
The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.
The fieldbus communication status is displayed via the three DeviceNet-specific LEDs.

Application

Bus connection

The bus connection can be selected when ordering, either Micro Style as 2xM12 round connectors or OpenStyle as a terminal strip with IP20 protection.

Both connection types have the function of an integrated T-distributor with incoming and outgoing bus line.

DeviceNet implementation

The CPX-FB11 operates with the "Predefined Master/Slave Connection Set" as a "Group 2 Only Server".
The polled I/O, change of state or synchronous method is used for the transmission of synchronous I/O data. The type of transmission can be selected in the network configuration.

The device diagnostics for all bus nodes CPX-FB11 is effectively gathered via strobed I/O and displayed in the input table of the controller.
In addition to synchronous data transmission, asynchronous communication is supported through explicit messaging, which enables detailed device diagnostics and parameterisation.

A comprehensive EDS file supports the display of asynchronous data. It is also possible to display system information and assign parameters while the controller is running via the user program or the configuration software.

An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.
With its address capacity of 64 byte inputs and 64 byte outputs, the CPX-FB11 supports any configuration of I/O modules, including pneumatic interface.

Special points in combination with CPX-FEC/CPX-CEC

When a fieldbus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the fieldbus node only provides the communication interface to the PLC.
Communication between the control block and CPX fieldbus node is

established via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:
• 8 byte outputs
• 8 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:
• 56 byte inputs
• 56 byte outputs

Bus node for handling communication between the electrical CPX terminal and a higher-order master via Profibus DP.
The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.
The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.
The fieldbus communication status is displayed via the Profibus-specific error LED.

Application

Bus connection

The bus connection is established via a 9-pin Sub-D socket with a typical Profibus allocation (to EN 50170).

The bus connector plug (with IP65/IP67 protection from Festo or IP20 protection from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable.

An active bus terminal can be connected using the DIL switch integrated in the plug.

The Sub-D interface is designed for controlling network components with a fibre-optic cable connection.

Profibus DP implementation

The CPX-FB13 supports the Profibus DP protocol to EN 50170 Volume 2 for synchronous I/O exchange, parameterisation and diagnostic functions (DPV0).

In addition to DPV0, asynchronous communication to the advanced specification DPV1 is supported. DPV1 provides asynchronous access to advanced system information and assigns operation parameters while the controller is running via the user program.

An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.

With its address capacity of 64 byte inputs and 64 byte outputs, the CPX-FB13 supports any configuration of I/O modules, including pneumatic interface.

Special points in combination with CPX-FEC/CPX-CEC

When a fieldbus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the fieldbus node only provides the communication interface to the PLC.
Communication between the control block and CPX fieldbus node is

established via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:
• 8 byte outputs
• 8 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:
• 56 byte inputs
• 56 byte outputs

Terminal CPX

Technical data – Bus node CPX-FB14

CANopen

Bus node for handling communication between the electrical CPX terminal and a CANopen network master or CANopen network.
The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.
The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.
The different CANopen statuses and the fieldbus communication status are displayed via three additional LEDs.

Application

Bus connection

The bus connection is established via a 9-pin Sub-D plug (pin) as per the CAN in Automation (CiA) specification DS 102 with additional 24 V CAN transceiver supply (option as per DS 102).

The bus connector plug (with IP65/IP67 protection from Festo or IP20 protection from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable.

There are four contacts available for the four wires (CAN_L, CAN_H, 24 V, 0 V) of the incoming and outgoing bus cables.

CANopen implementation

The CPX-FB14 supports the CANopen protocol in accordance with the specifications DS 301 V4.01 and DS 401 V2.0.
Implementation is based on the CiA Pre-defined Connection Set.
There are four PDOs available for fast I/O data exchange.

Advanced system information can also be accessed by means of SDO communication. SDO communication also facilitates parameterisation before network startup or while the controller is running via the user program.
An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.

With its address capacity, the CPX-FB14 supports a large number of I/O module configurations, including pneumatic interface.
By default, 8 byte digital inputs and 8 byte digital outputs can be addressed via PDO 1.

8 analogue input channels and 8 analogue output channels can be addressed via PDO 2 and 3. Status and diagnostic information can be evaluated via PDO 4.
Additional 8 byte digital inputs and outputs as well as 8 analogue input and output channels can be addressed via mapping.

Special points in combination with CPX-FEC/CPX-CEC

When a fieldbus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the fieldbus node only provides the communication interface to the PLC.
Communication between the control block and CPX fieldbus node is

established via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:
• 8 byte outputs
• 8 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:
• 56 byte inputs
• 56 byte outputs

Terminal CPX

FESTO

CC-Link

Bus node for handling communication between the electrical CPX terminal and a higher-order master for Control & Communication-Link (CC-Link) from Mitsubishi.
The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.
The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.
The fieldbus communication status is displayed via four CC-Link-specific LEDs.

Application

Bus connection

The bus connection can be selected when ordering and is established by means of a screw terminal with IP20 protection, a Sub-D plug with IP65/IP67 protection from Festo or IP20 protection from other manufacturers.

Both connection types have the function of an integrated T-distributor and thus support the connection of an incoming and outgoing bus cable.

The integrated interface with RS 485 transmission technology is designed for the typical CC-Link 3-wire connection technology (in accordance with CLPA CC-Link Spec. V1.1).

CC-Link implementation

The CPX-FB23 supports max. four stations per slave. The number of stations used can be set by means of a DIL switch. Synchronous data transmission for digital and analogue I/Os

is conducted using the bit and word ranges (Rx/Ry/RWr/RWw).
The CPX-FB23 supports an address space of max. 64 digital inputs and 64 digital outputs (Rx/Ry) or up to

16 analogue inputs and 16 analogue outputs (RWr/RWw). Mixed operation of digital and analogue inputs/outputs is possible.

Example:
Station 1 + 2 = 32 digital inputs and 32 digital outputs
Station 3 = 4 analogue inputs and 4 analogue outputs

Special points in combination with CPX-FEC/CPX-CEC

When a fieldbus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the fieldbus node only provides the communication interface to the PLC.
Communication between the control block and CPX fieldbus node is

established via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:
• 8 byte outputs
• 8 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:
• 56 byte inputs
• 56 byte outputs

Bus node for handling communication between the electrical CPX terminal and the Ethernet/IP network.
The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.
The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.

→ Internet: www.festo.com/catalog/...

Application

Bus connection

The bus connection is established via an M12 plug, D-coded to IEC947-5-2 with IP65/67 protection.

Ethernet/IP is an open bus system based on the Ethernet standard and TCP/IP technology (IEEE802.3).

Ethernet/IP implementation

The CPX-FB32 supports the two remote I/O and remote controller operating modes.
In remote I/O operating mode, all functions of the CPX valve terminal are

directly controlled by the Ethernet/IP master (host).
In addition to actuation via a bus system, it is possible to use IT technol-

ogies. An integrated web server enables diagnostic data to be visualised via HTML. Various programs support direct access to the data of the device

from the automation network.
The Ethernet/IP node for CPX supports the transmission technology that conforms to DIN EN 50173/CAT 5.

Special points in combination with CPX-FEC/CPX-CEC

When a fieldbus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the fieldbus node only provides the communication interface to the PLC.
Communication between the control block and CPX fieldbus node is

established via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:
• 8 byte outputs
• 8 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:
• 56 byte inputs
• 56 byte outputs

Technical data – Bus node CPX-FB33

PROFINET
INDUSTRIAL ETHERNET
NET

Bus node for operating the CPX valve terminal on PROFINET.
The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.
The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.
The fieldbus communication status is displayed via three bus-specific LEDs.

Application

Bus connection

The bus connection is established via two M12 sockets, D-coded to IEC61076-2-101 with IP65/67 protection.

Both connections are equivalent 100BaseTX Ethernet ports with integrated auto MDI functionality

(cross-over and patch cables can be used) that are brought together via an internal switch.

- Maximum segment length 100 m
- Transmission rate 100 Mbps

PROFINET implementation

The CPX-FB33 supports the PROFINET protocol on the basis of the Ethernet standard and TCP/IP technology to IEEE802.3.
This guarantees a data exchange with a high data transmission rate, for example I/O data from sensors, actuators or robot controllers, PLCs

or process equipment. In addition, non-real-time critical information such as diagnostic information, configuration information, etc. can be transferred. The Ethernet bandwidth is sufficient to transfer both data types (real-time and non-real-time) in parallel.

The bus node features LEDs for bus status and CPX peripheral information as well as switch elements, memory stick and a diagnostic interface.
The purpose of the memory stick is to guarantee fast replacement of the fieldbus node in the event of an error.

PROFINET provides the user with access to all peripherals, diagnostic data and parameter data of the CPX valve terminal. The fieldbus node can be used as a remote I/O or remote controller. All information relevant to the CPX can be read out and, depending on the function, changed via an MMI.

Special points in combination with CPX-FEC/CPX-CEC

When a fieldbus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the fieldbus node only provides the communication interface to the PLC.
Communication between the control block and CPX fieldbus node is

established via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:
- 8 byte outputs
- 8 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:
- 56 byte inputs
- 56 byte outputs

Terminal CPX

Technical data – Bus node CPX-M-FB34

Bus node for operating the CPX valve terminal on PROFINET IO.
The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.
The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.
The fieldbus communication status is displayed via three bus-specific LEDs.

Application

Bus connection

The bus connection is established via two RJ45 push-pull sockets to IEC61076-3-106 and IEC60603 with IP65/67 protection.

Both connections are equivalent 100BaseTX Ethernet ports with integrated auto MDI functionality

(cross-over and patch cables can be used) that are brought together via an internal switch.

- Maximum segment length 100 m
- Transmission rate 100 Mbps

PROFINET implementation

The CPX-M-FB34 supports the PROFINET IO protocol based on the Ethernet standard and the TCP/IP technology to IEEE802.3.
This guarantees a data exchange with a high data transmission rate, for example I/O data from sensors, actuators or robot controllers, PLCs

or process equipment. In addition, non-real-time critical information such as diagnostic information, configuration information, etc. can be transferred.
The Ethernet bandwidth is sufficient to transmit both data types (real-time and non-real-time) in parallel.

The bus node features LEDs for bus status and CPX peripheral information as well as switch elements, memory stick and a diagnostic interface.
The purpose of the memory stick is to guarantee fast replacement of the fieldbus node in the event of an error. PROFINET provides the user with

access to all peripherals, diagnostic data and parameter data of the CPX valve terminal. The fieldbus node can be used as a remote I/O or remote controller. All information relevant to the CPX can be read out and, depending on the function, changed via an MMI.

Special points in combination with CPX-FEC/CPX-CEC

When a fieldbus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the fieldbus node only provides the communication interface to the PLC.
Communication between the control block and CPX fieldbus node is

established via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:
- 8/16 byte outputs
- 8/16 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:
- 56/48 byte inputs
- 56/48 byte outputs

Terminal CPX

Technical data – Bus node CPX-M-FB35

FESTO

Bus node for operating the CPX valve terminal on PROFINET IO.
The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.
The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.
The fieldbus communication status is displayed via three bus-specific LEDs.

Application

Bus connection

The bus connection is established via two SCRJ push-pull sockets to IEC61754-24 (fibre-optic cable, AIDA standard) to IP65/67.

Both connections are equivalent 100BaseFX Ethernet ports that are brought together via an internal switch.

Fibre-optic cables made from plastic (POF) are suitable for use as the transmission medium.

- Maximum segment length 50 m
- Baud rate 100 Mbps

PROFINET implementation

The CPX-M-FB35 supports the PROFINET IO protocol based on the Ethernet standard and the TCP/IP technology to IEEE802.3.
This guarantees data exchange with a high data transmission rate, for example I/O data from sensors, actuators or robot controllers, PLCs or

process equipment. Furthermore, non real-time critical information such as diagnostic information, configuration information, etc. can be transferred. The Ethernet bandwidth is sufficient to transmit both data types (real-time and non real-time) in parallel.

The bus node features LEDs for bus status and CPX peripheral information as well as switch elements, memory stick and a diagnostic interface. The purpose of the memory stick is to guarantee fast replacement of the fieldbus node in the event of an error. PROFINET provides the user with

access to all peripherals, diagnostic data and parameter data of the CPX valve terminal. The fieldbus node can be used as a remote I/O or remote controller. All information relevant to the CPX can be read out and, depending on the function, changed via an MMI.

Points to note in connection with CPX-FEC/CPX-CEC

When combining a fieldbus node with a control block (CPX-FEC, CPX-CEC, in fieldbus remote controller operating mode), the connected I/Os or valves, sensors and actuators are controlled via the CPX control block.

In this case, the fieldbus node only provides the communication interface to the PLC.
Communication between the control block and CPX fieldbus node takes

place via interlinking of the CPX modules and takes up the following address capacity in the CPX system:
- 8/16 byte outputs
- 8/16 byte inputs

The following address capacity remains in the control block or CPX system for actuation of the peripherals:
- 56/48 byte inputs
- 56/48 byte outputs

Terminal CPX

Technical data – Bus node CPX-FB38

EtherCAT.

Bus node for operating the CPX valve terminal on EtherCAT.
The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.
The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.
The fieldbus communication status is displayed via four bus-specific LEDs.

➔ Internet: www.festo.com/catalog/...

Application

Bus connection

The bus connection is established via two M12 sockets, D-coded to IEC61076-2-101 with IP65/67 protection.

Both connections are equivalent 100BaseTX Ethernet ports with integrated auto MDI functionality

(cross-over and patch cables can be used) that are brought together via an internal switch.

- Maximum segment length 100 m
- Transmission rate 100 Mbps

EtherCAT implementation

The CPX-FB38 supports the EtherCAT protocol based on the Ethernet standard and the TCP/IP technology to IEEE802.3.
This guarantees a data exchange with a high data transmission rate, for example I/O data from sensors,

actuators or robot controllers, PLCs or process equipment. In addition, non-real-time critical information such as diagnostic information, configuration information, etc. can be transferred.

The data bandwidth is sufficient to transmit both data types (real-time and non-real-time) in parallel.

The bus node features LEDs for bus status and CPX peripheral information as well as switch elements and

a diagnostic interface. The fieldbus node can be used as a remote I/O or remote controller. All information relevant to the CPX can be read out and, dependent on the function, changed via an MMI/FMT.

Special points in combination with CPX-FEC/CPX-CEC

When a fieldbus node is combined with a control block (CPX-FEX, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX control block.

In this case, the fieldbus node only provides the communication interface to the PLC.
Communication between the control block and CPX fieldbus node is

established via the interlinking of the CPX modules and occupies an address capacity of the CPX system of:
- 8 byte outputs
- 8 byte inputs

The remaining address capacity of the control block or CPX system for actuating the peripherals is:
- 56 byte inputs
- 56 byte outputs

Technical data – CPX-CP interface
The CPX-CP electrical interface establishes the connection to CP modules of the CPI installation system via prefabricated cables. The I/O data of the connected valve terminals with CP string extension and CP input and output modules are transferred to the connected CPX bus node and thus via fieldbus to the higher-order controller. This enables modular centralised and compact decentralised concepts to be established with one system.
The CP electrical interface is supported by all CPX fieldbus nodes and the CPX-FEC.

Application

CP connection

As well as transmitting the communication data, the max. four CP strings of a CPX-CP interface also transmit the supply voltage to the connected sensors and the load supply to the valves (or outputs). Both circuits are supplied separately with 24 V, but with a common reference potential. The valve terminals with CP string extension (or outputs) are supplied with voltage for the electronics and valves by the interlinking block.

The following combinations are made possible by the CP interface:
• Centralised analogue and digital inputs and outputs of the CPX terminal

• Decentralised digital inputs and outputs of the CP installation system
• Valve/valve terminals that can be connected both centrally and decentrally

Configuration example – CP interface with CP modules

Implementation

The CPX-CP interface supports
the CPI system:
- Max. 4 individual electronically
  protected CP strings
- Max. 4 CP modules per string
- Max. 32 inputs/32 outputs
  per string
- The maximum length of a string
  is 10 m. If the CP interface is
  positioned centrally, the CP system
  can cover an area of 20 m in
  diameter
- Modules with CPI functionality

- **Note**

  When arranging the CP modules it
  should be taken into consideration
  that CP input modules without CPI
  functionality should always be
  placed at the end of a string.

The following CP module variants are
available:
- Input modules with 8 or 16 digital
  inputs (connection technology M8,
  M12 and CageClamp)
- Output modules with 4 or 8 digital
  outputs (connection technology
  M12)
- Valve terminals with CP string
  extension (up to 32 solenoid coils,
  different valve functions)

CPI modules support the following
functions:
- Module-oriented diagnostics
- Module/channel-oriented
  parameterisation
- Support for all functions by the
  CPX-MMI or CPX-FMT operator unit
- Module can be positioned
  anywhere within the string

Several CP interface modules can
be combined in one CPX terminal,
depending on the address capacity
of the bus node.
Example:
- CPX-FB13 (512 I/O)
- Max. 4 CP interface modules
  (128 I/O each) possible

Configuration

The following rules apply for a string
of a CPX-CP interface:
- Max. one output module or one
  valve terminal without CPI
  functionality
- Max. one output module without
  CPI functionality or one valve
  terminal with CP string extension
- Any number of CP modules with CPI
  functionality, up to the maximum
  limit of 4 modules and/
  or 32 inputs/32 outputs per string

- **Note**

  The remanent saving of configur-
  ation data means that changes in
  the configuration or faulty modules
  are still displayed even after
  a voltage failure.

Maximum extension:
- 4 input modules and 4 valve
  terminals/output modules without
  CPI functionality
- 16 CP modules with CPI
  functionality

The configuration of the strings with
respect to the module type and posi-
tion of the modules in the string is
entered by activating the SAVE key in
the CPX-CP interface and saved there
remanently (plug and work).
Saved data are retained even when
the CP interface is isolated from the
voltage supply.

The representation of the CP inter-
face within a CPX terminal and thus
at the fieldbus is dependent on the
characteristics of the relevant field-
bus system. In addition to input and
output addressing, this also applies
to the representation of the diag-
nostics and parameterisation of the
CP module and the characteristics
of the CPI system.

Control block CPX-CMXX
Technical data

The control block CPX-CMXX is an intelligent module in the CPX terminal for controlling electric drive units. Individual axis and simple multi-axis applications can easily be implemented. Programming is not necessary. Configuration, parameterisation and commissioning of the application is easily achieved with the Festo Configuration Tool (FCT).

- Configuration of two axes groups with up to four axes each is possible
- There are 1024 position sets available per axes group
- Input or Teach-In of positions in specified set structure
- Parameterisation via Ethernet
- Communication protocol: FHPP-MAX, Festo handling and positioning profile for multi-axis movements.
- Control of drive units via CANopen

Control block CPX-CM-HPP

Technical data

FESTO

The control block CPX-CM-HPP is a module in the CPX terminal for controlling electric drives.
The control component is independent of the fieldbus node used. This means that Festo's electric drive technology is compatible with all industrial communication interfaces.
The control block does not need to be programmed.

- Max. 4 individual electric axes can be controlled via CAN bus
- No programming required
- Standardised communication with the drives via the Festo Handling and Positioning Profile (FHPP)
- Quick configuration and diagnostics via the operator unit CPX-MMI
- Simple, flexible and cost-effective

General technical data		
Protocol		FHPP
Max. address volume for inputs	[byte]	32
Max. address volume for outputs	[byte]	32
LED display (product-specific)		Error: Error
		PL: Power supply
Device-specific diagnostics		Diagnostic memory
		Channel and module-oriented diagnostics
		Undervoltage/short circuit of modules
Parameterisation		Forcing of channels
		System parameters
Configuration support		Operator unit CPX-MMI
Total number of axes		4
Nominal operating voltage	[V DC]	24
Operating voltage range	[V DC]	18 … 30
Power failure buffering	[ms]	10
Intrinsic current consumption at nominal operating voltage	[mA]	Typically 80
Protection class to EN 60529 (plug connector plugged in)		IP65
Dimensions W x L x H (incl. interlinking block)	[mm]	50 x 107 x 55
Product weight (without interlinking block)	[g]	140

Materials	
Housing	PA, reinforced
	PC
Note on materials	RoHS-compliant

Terminal CPX

FESTO

Technical data – Input module, digital

Function

Digital input modules enable the connection of two-wire and three-wire sensors (proximity sensors, inductive or capacitive sensors, etc).
Depending on the connection block selected, the module supports various connection concepts with different numbers of sockets (single or double allocation).

Applications

- Input modules for 24 V DC sensor supply voltage
- PNP or NPN logic
- Supports connection blocks with M12, M8, Sub-D, Harax and terminal connection
- Module features can be parameterised
- The input module receives the voltage supply for the electronics and the sensors from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection

Terminal CPX

Technical data – Input module, digital, 16 inputs

Function

Digital input modules enable the connection of two-wire and three-wire sensors (proximity sensors, inductive or capacitive sensors, etc). Depending on the connection block selected, the module supports various connection concepts with different numbers of sockets (single or double allocation).

Applications

- Input modules for 24 V DC sensor supply voltage
- PNP logic
- Module features can be parameterised
- The input module receives the voltage supply for the electronics and the sensors from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection

Technical data – Output module, digital

FESTO

Function

Digital outputs control actuators such as individual valves, hydraulic valves, heating controllers and many more. Separate circuits are created using an additional power supply. Parallel connection of the outputs of a module enables consuming devices to be controlled with up to 4 A.

Applications

- Output module for 24 V DC supply voltage
- PNP logic
- Module features can be parameterised
- The output module receives the voltage supply for the electronics and the outputs from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection in each channel

Terminal CPX

Technical data – Input/output module, digital

Applications

- Digital multi I/O module
  for 24 V DC supply voltage
- Supports connection blocks
  with Sub-D, terminal connection
  and M12 connection (8-pin)
- Module features
  can be parameterised
- The inputs receive the voltage
  supply for the electronics and the
  sensors from the interlinking block
- The outputs receive the voltage
  supply for the electronics and the
  outputs from the interlinking block

- Module protection and diagnostics
  through integrated electronic fuse
  protection for the sensor power
  supply and integrated electronic
  fuse protection in each output
  channel

Function
The multi I/O module controls devices
with a high number of inputs and
outputs per connection point.
Because the module supports Sub-D
connection blocks, consoles with
pushbuttons and lamps can be
connected to the CPX terminal using a
minimal amount of installation space.

Up to eight inputs and outputs can be
connected to a connection point with
IP65 protection.

Support for the M12 connection block
(8-pin) means that up to four cylinder-
valve combinations with integrated
sensors can be connected. Each cylin-
der-valve combination is supported by
two inputs and two outputs per
socket. It is therefore possible to con-
trol max. two solenoid coils and oper-
ate two sensors with a pre-assembled
cable.

Two inputs on two sockets are bridged
to provide support for the diagnostic
module of the cylinder-valve combina-
tion. This effectively means that there
are three inputs and two outputs
available on two sockets.

As an alternative to the Sub-D and
M12 connection block (8-pin) for
installation with higher protection
to IP65, the terminal connection block
produces an identical result for
installation with IP20 protection –
or with IP65/67 protection with
additional cover.

Subordinate I/O modules with
multi-pin plug connection (Sub-D plug
or multi-pin cable for self-assembly)
support the cost-effective and space-
saving integration of critical installa-
tion areas such as energy chains
or upstream functions.

Terminal CPX

Technical data – Analogue module for inputs

Function

Analogue modules control devices with a standardised analogue interface such as pressure switches, temperature, flow rate, filling level, etc. Depending on the connection block selected, the analogue module supports various connection concepts with different numbers of sockets or terminals.

Applications

- Analogue module for 0 ... 10 V, 0 ... 20 mA or 4 ... 20 mA
- Supports connection blocks with M12, Sub-D and terminal connection
- Analogue module features can be parameterised
- Different data formats available
- Operation with and without galvanic isolation possible
- The analogue module receives the voltage supply for the electronics and the sensors from the interlinking block
- Analogue module protection and diagnostics through integrated electronic fuse protection

Technical data – Analogue input module with pressure sensors

Function

The pressure input modules enable a maximum of four pressures to be processed. The internal measured value of the sensor (analogue value with 10-bit resolution) is converted into an internal numerical format as appropriate to the parameterisation and made available to the fieldbus node as an image table. It is also possible to combine two channels into one differential pressure channel.

Applications

- Measuring range 0 … 10 bar or −1 … +1 bar
- Choice of units of measurement
- Processing of max. four pressures per module
- Pressure indication via LCD display
- Direct connection via QS4 push-in connectors
- Error message via CPX
- Channel-oriented diagnostics

General technical data				
Type			CPX-4AE-P-B2	CPX-4AE-P-D10
No. of analogue inputs			4	
Pneumatic connection			QS-4	
Nominal operating voltage		[V DC]	24	
Operating voltage range		[V DC]	18…30	
Intrinsic current consumption		[mA]	Typically 50	
Measured variable			4x relative or 2x differential pressure measurement	
Displayable units			• kPa • mbar • psi	
Pressure measuring range	Starting value	[bar]	−1	0
	Final value	[bar]	1	10
Internal cycle time		[ms]	5	
Data format			• 15 bits + prefix • Binary representation in mbar, kPa, psi

Technical data – Analogue module for temperature inputs

Function

The CPX-PT100 analogue input module with 4 channels for temperature measurement enables the connection of up to 4 temperature sensors of the type PT100-PT1000, Ni100-Ni1000, etc. The temperature module supports various connection concepts with different numbers of sockets or terminals as appropriate to the connection block selected.

Applications

- Temperature module for temperature sensors PT100, PT200, PT500, PT1000, Ni100, Ni120, Ni500, Ni1000
- Supports connection blocks with M12, Harax and terminal connection
- Temperature module features can be parameterised
- 2-wire, 3-wire and 4-wire connection
- The temperature module is provided with voltage supply for the electronics and the sensors via the interlinking block
- Temperature module protection and diagnostics through integrated electronic fuse protection

Terminal CPX

Technical data – Analogue module for thermocoupler

Function

The CPX-4AE-TC analogue input module with four channels for temperature measurement enables up to four thermocoupler sensors to be connected. The channels feature wire break and short circuit detection.

If no cold junction compensation sensor is being used, an internal theoretical value of 25 °C can be used (accuracy is impaired).

Applications

- Supports connection blocks with M12 and terminal connection
- Temperature module features can be parameterised
- 2-wire connection
- 2-wire connection for a PT1000 sensor for cold junction compensation
- The temperature module is provided with voltage supply for the electronics and the sensors via the interlinking block
- Temperature module protection and diagnostics through integrated electronic fuse protection

General technical data		
Type		**CPX-4AE-TC**

Function

Analogue modules control devices with a standard analogue interface such as proportional valves, etc. The analogue module supports various connection concepts with different numbers of sockets or terminals as appropriate to the connection block selected.

Applications

- Analogue module for 0 ... 10 V, 0 ... 20 mA or 4 ... 20 mA
- Supports connection blocks with M12, Sub-D and terminal connection
- Analogue module features can be parameterised
- Different data formats available
- Operation with and without galvanic isolation possible
- The analogue module receives the voltage supply for the electronics and the actuators from the interlinking block
- Analogue module protection and diagnostics through integrated electronic fuse protection

Terminal CPX

Technical data – PROFIsafe shut-off module

FESTO

Function

The PROFIsafe shut-off module interrupts the contact rails of the interlinking block for valves and outputs. The supply voltage for valves can be switched by the module within the CPX terminal and via a connection block to two consuming devices. Actuation takes place via the fieldbus node (ProfiNet) of the CPX terminal.

Scope of application

- Output module for 24 V DC supply voltage
- Shut-off module for supply voltage for valves
- Can only be used with ProfiNet fieldbus node
- The shut-off module is supplied with voltage for the electronics and the outputs by the interlinking block
- The outputs are supplied from the power supply for valves (V_{Valves})

General technical data			
Type			**CPX-FVDA-P**
Number of outputs			2

Terminal CPX

Technical data – Interlinking block with system supply
FESTO

Function

Interlinking blocks ensure the electrical supply of all other CPX modules. They have contact rails, from which the other CPX components on the interlinking modules are supplied with current.

Internal division of the power supply makes it possible to switch off specific areas of the sensors and actuators individually.

Applications

- 24 V DC supply voltage for electronics of the CPX terminal
- 24 V DC supply voltage for inputs
- 24 V DC supply voltage for valves
- 24 V DC supply voltage for outputs

- ⬤ - Hinweis

Note the following points about the interlinking block CPX-M-GE-EV-S-7/8-CIP-4P:
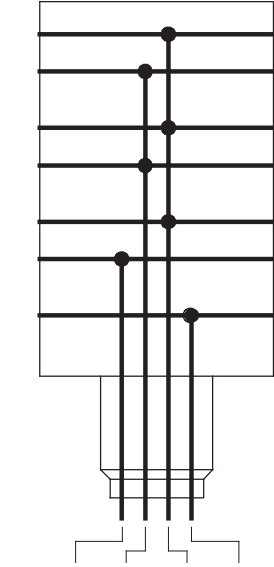

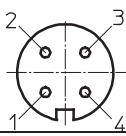

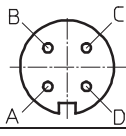

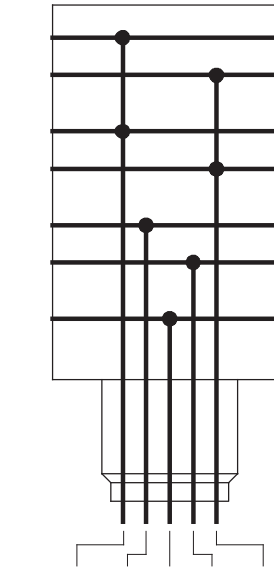

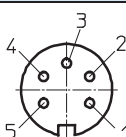

- Must be mounted as the first module to the right of the left-hand end plate

- Only permitted as an interlinking block to a bus node
- The functional earth (FE) must be connected via the left-hand end plate

Terminal CPX

Technical data – Interlinking block

Function

Interlinking blocks ensure the electrical supply of all other CPX modules. They have contact rails, from which the other CPX components on the interlinking modules are supplied with current.
Internal division of the power supply makes it possible to switch off specific areas of the sensors and actuators individually.

Applications

- All voltages are fed through to the next module by means of an interlinking system.
- The connected electronics module for inputs/outputs or bus node taps off the required voltage.

Terminal CPX

Technical data – Pneumatic interface MPA

Function

The pneumatic interface MPA establishes the electromechanical connection between the CPX terminal and the valve terminal MPA.

The signals from the bus node are forwarded to the control electronics in the electrical modules of the valve terminal MPA via the integrated CPX bus. The bus signal for activation of the solenoid coils is converted in the electronics module for max. 8 coils. From a technical point of view, the individual MPA pneumatic modules each represent a separate electrical module with digital outputs. Valves, which are galvanically isolated, can be supplied with power via the interlinking block CPX-GE-EV-V.

Applications

- Interface to the valve terminal MPA
- Max. 128 solenoid coils
- Features of the electronics module of the valve terminal MPA can be parameterised, for example status of the solenoid coils in the event of fieldbus communication being interrupted (fail-safe), individual channel diagnostics can be activated, condition monitoring can be activated individually for each valve
- The pneumatic interface receives the voltage for the electronics and the supply voltage for the valves from the left-hand interlinking block and feeds them through to the electronics modules of the valve terminal MPA
- Electronics modules of the valve terminal MPA:
  - Undervoltage of valves
  - Short circuit of valves
  - Open load of valves
  - Counter preset reached in condition monitoring

Terminal CPX

Technical data – Pneumatic interface MPA-L

FESTO

Function

The pneumatic interface MPA-L establishes the electromechanical connection between the terminal CPX and the valve terminal MPA-L.

The bus signal for actuating the solenoid coils is converted in the pneumatic interface for the entire valve terminal.

The interlinking within the valve terminal is identical with the interlinking with multi-pin plug connections.

Application

- Actuation of the valve terminal MPA-L
- Max. 32 solenoid coils
- The pneumatic interface receives the voltage for the electronics and the supply voltage for the valves from the left-hand interlinking block and feeds them through to the electric modules of the valve terminal MPA-L

Terminal CPX

Technical data – Pneumatic interface MPA-F

Function

The pneumatic interface MPA-F establishes the electromechanical connection between the CPX terminal and the valve terminal MPA-F.

The signals from the bus node are forwarded to the control electronics in the electrical modules of the valve terminal MPA-F via the integrated CPX bus. The bus signal for activation of the solenoid coils is converted in the electronics module for max. 8 coils. From a technical point of view, the individual MPA-F pneumatic modules each represent a separate electrical module with digital outputs. Valves, which are galvanically isolated, can be supplied with power via the interlinking block CPX-GE-EV-V.

Applications

• Interface to the valve terminal MPA-F
• Max. 128 solenoid coils
• Electronics module can be parameterised, for example status of the solenoid coils in the event of fieldbus communication being interrupted (fail-safe), individual channel diagnostics, condition monitoring can be activated individually for each valve
• In the version with pressure sensor, display of the numerical pressure value, unit and adherence to setpoint value. Parameterisation via PLC or handheld unit (CPX-MMI)
• Voltage for electronics and valves supplied from the left-hand interlinking block
• Electronics modules of the valve terminal MPA-F:
  – Undervoltage of valves
  – Short circuit of valves
  – Open load of valves
  – Counter preset reached in condition monitoring

Terminal CPX

Technical data – Pneumatic interface VTSA/VTSA-F

Function

The pneumatic interface VTSA establishes the electromechanical connection between the CPX terminal and the valve terminal type 44 VTSA/ type 45 VTSA-F.

A complete pneumatic control loop system (FB-valve-drive-sensor-FB) can therefore be connected to the fieldbus using the input modules of the CPX terminal.

Different circuits for valves and electrical outputs are implemented using an additional power supply. The integrated valve diagnostic functions enable the causes of errors to be found quickly, therefore increasing system availability.

Applications

- Interface to the valve terminal VTSA and VTSA-F
- Max. 32 solenoid coils
- Address space allocation (configuration) of valve terminals can be set using integrated DIL switches
- Pneumatic interface features can be parameterised, for example status of the solenoid coils in the event of fieldbus communication being interrupted (fail-safe)
- The pneumatic interface receives the voltage for the electronics and the supply voltage for the valves from the left-hand interlinking block
- Detection of missing solenoid coils and short circuit monitoring for the valves

Current consumption of module from electronics/sensor supply		[mA]	Typically 15
Supply voltage for valves		[V DC]	24 +10% −15%
Electrical isolation	Channel – channel		No
	Channel – internal bus		Yes, using an additional power supply for valves (in preparation)
LED displays	Group diagnostics		1
	Channel diagnostics		–
	Channel status		– (on valves)
Diagnostics			• Load voltage of valves • Short circuit, solenoid coils (channel-oriented) • Wire break, solenoid coils (channel-oriented quiescent current detection for solenoid coils)
Parameterisation			• Module monitoring • Wire break monitoring, channel x • Fail-safe behaviour, channel x
Protection class to EN 60529			IP65
Temperature range	Operation	[°C]	−5 ... +50
	Storage/transport	[°C]	−20 ... +70
Materials			Polymer
Grid dimension		[mm]	50
Dimensions W x L x H		[mm]	50 x 110 x 58
Weight		[g]	150

Terminal CPX

Accessories – Pneumatic interface CPA

FESTO
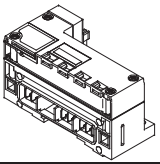

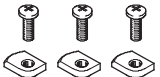

1	Connecting plug to valves
2	Error LED (red)
3	DIL switch under transparent cover
4	Inscription fields for addresses

Ordering data

Designation		Part No.	Type
Pneumatic interface CPA			
	For CPA in 10 mm width	**195710**	**CPX-GP-CPA-10**
	For CPA in 14 mm width	**195712**	**CPX-GP-CPA-14**
H-rail mounting			
	For mounting CPX terminal and valve terminal CPA on H-rail	**526032**	**CPX-CPA-BG-NRH**

Dimensions – Plastic interlinking module   Download CAD Data ➔ www.festo.com/us/cad

With bus nodes and connection blocks

1	Left-hand end plate (earthing plate optional)	5	Connection block CPX-AB-8-KL-4POL	8	Connection block CPX-AB-4-M12x2-5POL	n	Number of bus nodes and connection blocks for CPX
2	Bus nodes	6	Connection block CPX-AB-1-SUB-BU-25POL	9	Right-hand end plate

Product Range and Company Overview

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services

Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drives

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!
Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
