

Modular electrical peripherals, for type 03/04

FESTO

- 2 - Type discontinued
Available up until 2017

Modular electrical peripherals, for type 03/04

Key features

FESTO

Innovative

- First modular valve terminal on the market with modular electrical peripherals
- Standardised from the individual midi valve up to multi-pin and fieldbus connections
- First programmable valve terminal with integrated controller
- Digital I/O modules, either PNP switching
- Analogue I/O in the field for short lines
- Special modules for control desks
- Interfaces for subordinate, decentralised installation systems

Modular

- Modular system offering a range of configuration options
- Expandable up to 26 solenoid coils
- Conversions and extensions are possible at any time
- Connection blocks can be extended using 3 screws M4x14
- Modular electrical peripherals with digital and analogue I/Os
- High pressure range

Reliable

- Sturdy and durable metal components
 - I/O modules
 - Connection technology
 - Valves
 - Connection blocks
- Fast troubleshooting thanks to LEDs on the valves and I/O modules
- Diagnosis using fieldbus
- Pre-assembled cables for all I/O modules
- Reliability of service through replaceable valves and modules

Easy to assemble

- Ready to install unit, already assembled and tested
- Lower costs for selection, ordering, assembly and commissioning
- Secure wall mounting or via H-rail

Modular electrical peripherals, for type 03/04

Key features

Modular electrical peripherals for valve terminal type 03/04

Modular electrical peripherals provide the required control technology for type 03 (MIDI/MAXI) and type 04 (ISO) valve terminals. Together these components form the most comprehensive system range in intelligent pneumatics and also offer the advantage of a sturdy metal design.

As well as incorporating protection class IP65, the system also provides benefits through the sturdy design of its modules and connections. Individual modules are enclosed in metal housings with push-in fittings, and are made primarily of steel. The connections between the modules are protected by special seals and each connection point is secured using 3 robust M4x14 DIN 912 screws.

The main industrial fieldbuses are used for networking and control. Directly integrated programmable controllers (PLC) with fieldbus interface from Festo can also be used for actuation.

The module also offers various actuation and connection options for machine control.

Ongoing further development and a worldwide service and consultation network round off the performance spectrum for this system.

Note

Use the menu-driven online configurator for modular electrical peripherals type 03/04 and valve terminal in the electronic catalogue on www.festo.com.

Type 03 with fieldbus connection

Type 03 with integrated programmable PLC

Type 04 with fieldbus connection

Ordering

Modular electrical peripherals type 03/04 and valve terminal are fully assembled according to your order specifications and individually tested.

The finished valve terminal consists of the electrical peripherals including the required actuator and the selected components of the MIDI/MAXI or ISO modules.

Modular electrical peripherals type 03/04 with valve terminal are ordered using two separate order codes. One order code defines the modular electrical peripherals type 03/04, while the other specifies the pneumatic components of the valve terminal.

Modular electrical peripherals type 03/04 can naturally also be configured without a valve terminal as a remote I/O and can be used on a fieldbus or with an integrated controller. For this order, you only require the order code for the electrical peripherals.

The order lists for the modular electrical peripherals type 03/04 can be found in this chapter. For information on how to order the pneumatic components see:

- ➔ Internet: type 03 midi maxi (valve terminal type 03)
- ➔ Internet: type 04 midi maxi (valve terminal type 04)

Modular electrical peripherals, for type 03/04

Key features – General

FESTO

Performance characteristics

Control block, fieldbus connection, multi-pin connection

Optimising and extending applications:

- Modules for installation-saving connection using sturdy Sub-D plugs in IP65
- Low-cost connections to input/output stations and control units
- CP modules for connecting decentralised CPV and CPA valve terminals
- Extensions and supplements can be added at any time

Easy mounting:

- On H-rail
- On mounting surface
- With covers in welding environments

Simple servicing and maintenance:

- LED display
- Manual override
- Clip-on inscription labels

Convenient diagnosis via fieldbus connection and integrated PLC:

- Status bits
- Diagnostic bits
- Integrated self-test

Input/output modules

Flexible for control systems thanks to an extensive range of connection nodes:

- Multi-pin connection
- Fieldbus connection

Stand-alone solutions with integrated PLC (control block).

Electrical digital inputs/outputs:

- Max. 12 modules in conjunction with suitable nodes
- Inputs for 24 V DC sensors, PNP
- Outputs for small-load power consumers 24 V DC

Proportional pneumatics:

- Analogue modules optimised for proportional valves, e.g. for Festo MPYE
- To detect, control/regulate universal variables (4 ... 20 mA or 0 ... 10 V DC) within the process – locally to IP65

Modular electrical peripherals, for type 03/04

Key features – General

Types of pneumatic valve terminals supported

Type 03 – MIDI/MAXI valve terminals

Type 04 – ISO valve terminals

General functions of the bus nodes and control blocks

A bus node or control block is at the heart of the modular electrical peripheral system. They manage the communication connection to higher-order controllers and master interfaces and a PLC program with a full range of additional functions is executed directly in the control block. The power supply for the I/O modules and the sensors connected to them is provided by means of the bus node or control block, as is the load supply for the solenoid coils and the electronic outputs.

System monitoring and diagnosis are further important functions of the bus node or control block. The diagnostics are composed of three elements:

- Device-specific information displayed directly on the bus node or control block by means of LEDs.
- Device-specific status bits that are transferred to the control program via the network.
- Protocol-specific diagnoses.

The bus nodes or control blocks collect the most important diagnostic data in the status bits and transfer it to the higher-order controller as logical inputs.

Suitable further processing functions in the control program provide helpful information on the status of the power supply, short circuits and overload (with some of this information relating to specific modules or channels). Further protocol and node-specific diagnostic services are described in conjunction with the individual I/O modules, bus nodes and control blocks.

The control blocks are original controllers from Festo and are identical to systems with the original design in terms of both their function and their system and integration compatibility.

Modular electrical peripherals, for type 03/04

Key features – Electrical components

Supply voltage

The entire power supply for the system and the sensors and actuators connected to it is provided via an M18 mains plug.

The power supply for the electrical peripherals type 03 and 04 is split in two.

Pin 1 of the mains plug provides the sensor supply for the input modules and supplies the internal electronics of the individual modules.

The sensor supply is protected separately from the electronics supply in the node by means of a 2 A fuse. We recommend that pin 1 be additionally protected against short circuit/overload by means of a 3.15 A external fuse.

Pin 2 of the mains plug provides the load supply for solenoid coil actuation and the electrical 24 V DC outputs.

The load supply must be externally protected against short circuit and overload by means of a 10 A strong fuse.

The load voltage of the valves and electrical outputs can be disconnected separately. The common 0 V line is connected to pin 3. Pin 4 serves as an earth terminal.

With valve terminals of the type 04, the solenoid coils are protected by an additional fuse.

Example of circuit

Connection of a common 24 V DC power supply and the protective earth (type 03 used in the example)

- 1 Electrical outputs (externally fused)
- 2 Valves
- 3 Voltage supply connection for node type 03
- 4 Potential equalisation
- 5 Load voltage, can be disconnected separately
- 6 Power supply unit (e.g. central voltage supply)
- 7 24 V DC electronics
- 8 Electrical inputs/sensors

Pin allocation

- 1 24 V DC supply for electronics and inputs
- 2 24 V DC load supply for valves
- 3 0 V
- 4 Earth terminal

Modular electrical peripherals, for type 03/04

Key features – Diagnosis

General system diagnosis		
Diagnostic information	Description	Function
Short circuit/overload at output	Output has short-circuited or become overloaded	Monitors the electrical outputs of the output modules
$V_{\text{Valves}} < 21.6 \text{ V DC}$	Load voltage at pin 2 (valves and outputs) of the operating voltage connection $< 21.6 \text{ V DC}$	Monitors the tolerance of the load voltage for valves and electrical outputs
$V_{\text{Outputs}} < 10 \text{ V DC}$	Load voltage at pin 2 (valves and outputs) of the operating voltage connection $< 10 \text{ V DC}$	Monitors the load voltage for valves and electrical outputs (no voltage, e.g. EMERGENCY-STOP)
$V_{\text{Sensor}} < 10 \text{ V DC}$	Operating voltage at pin 1 (electronics and inputs) of the operating voltage connection $< 10 \text{ V DC}$	Monitors the operating voltage for inputs (sensors). Indicates whether an internal fuse has tripped, either the fuse in the node or at least an electronic fuse in the input module ¹⁾ .

1) An electronic fuse for input modules has been available since February 1999.

Modular electrical peripherals, for type 03/04

Key features – I/O addressing

General guidelines on I/O addressing

A maximum of 12 electrical modules can be assembled. Note, however, that some modules occupy 2 or even 3 module positions, in which case the maximum number of modules that can be assembled is reduced.

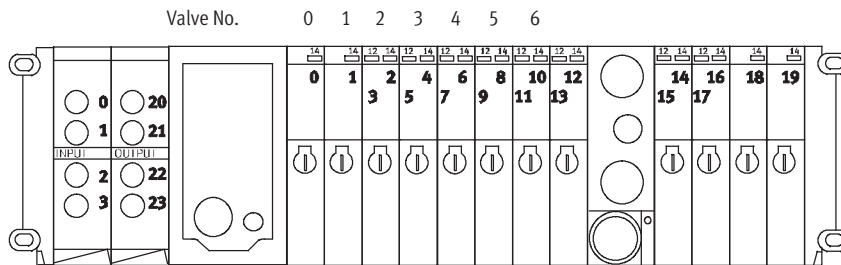

All 12 module positions can generally be used as inputs or outputs, however there are various fieldbus-specific restrictions that are documented in the node description.

The number and type of inputs/outputs, and hence input/output modules, supported by the network also depends on the fieldbus node used. The number of solenoid coils is restricted to 26 and is included in the address space of the digital outputs.

Each sub-base for single solenoid valves occupies 2 outputs, and each sub-base for double solenoid valves occupies 4 outputs. Within the output addresses, the valve solenoids are counted in ascending order from left to right starting from the node. In the case of double solenoid valves, coil 14 comes before coil 12 in the counting mode.

The address space of the valves is always rounded up to a value divisible by 4.

The solenoid coils are followed by the general outputs in the address space. The individual outputs in the output modules are listed in the address space in ascending order, from top to bottom and the modules are listed from right to left starting from the node (see diagram).

Test method for activation of the solenoid coils

The fieldbus nodes generally contain two different test sequences that activate the solenoid coils independently of any fieldbus combination or higher-order controller so that the function of the assembled valves can be verified.

The solenoid coils will be activated in parallel or serial mode depending on the test sequence selected, with each coil individually activated with a constant switching frequency in a predefined order.

SIEMENS

ASA

Fieldbus variations:

Of the more than 20 different fieldbus systems (protocols) available in the market, some have emerged as the most important variants. Festo supports these by means of various fieldbus nodes (FBxx) on its valve terminals. Fieldbus systems require a powerful, central PLC and a master interface adapted to that particular fieldbus.

Fieldbus systems are generally used when several devices with many inputs/outputs, complex functions or high communication levels must be controlled. In this case, the advantages of simple cabling, easy diagnosis and maintenance outweigh the extra outlay for a fieldbus master interface and the necessary know-how.

Festo fieldbus:

A fieldbus developed by Festo with simple prompting, supported by the control systems in the FPC, SF and IPC series (Festo FB5).

Interbus, Interbus-FOC:

An open fieldbus standard, originally developed by Phoenix Contact and now in worldwide use. Important installation accessories such as bus plugs must be obtained from Phoenix or its partners (Festo FB6). Festo FB21 is required for Interbus-FOC, the Interbus variant "Rugged Line" with fibre optic cable.

Profibus DP:

An open fieldbus standard, originally developed by Siemens and in worldwide use (Festo FB13 for 12 MBd).

DeviceNet:

Open fieldbus standard based on the CAN technology originally developed for the automotive sector. DeviceNet was originally developed by Rockwell (Allen Bradley) and is now an open standard.

ASA (FIPIO):

Fieldbus used mainly in France (Festo FB16).

FESTO

Modular electrical peripherals, for type 03/04

Peripherals overview – Control blocks

Control blocks

Integrated controllers in the Festo valve terminals permit the construction of stand-alone control units to IP65 – without control cabinets.

Using the slave operation mode, these valve terminals can be used for intelligent pre-processing and are therefore ideal modules for designing decentralised intelligence.

With the master operation mode, terminal groups can be designed with many options and functions, which can autonomously control a medium sized machine/system.

Control block variants

Integrated Festo PLC

A high performance miniature control system from Festo has been integrated into the SF3 valve terminal node. This provides stand-alone control of up to 128 inputs and 128 outputs.

With the Festo fieldbus, additional I/O and expanded functions can be installed and controlled.

The control block SF3 can be operated as required as a stand-alone operation, a fieldbus slave or master (with up to 31 fieldbus slaves and up to 1048 inputs and outputs).

Modular electrical peripherals, for type 03/04

Peripherals overview – Bus nodes

Equipping with bus node

Modular electrical peripherals for type 03/04 can be equipped with bus node. In addition to controlling the valves and electrical outputs, corresponding sensor feedback can be recorded at the electrical peripherals and transmitted via the fieldbus to the control cabinet.

The following applies to bus nodes:

- Max. 26 valve solenoid coils
- Number of inputs dependent on fieldbus type
- Number of electrical outputs dependent on fieldbus type and number of pneumatic valves
- Status bits for program controlled diagnosis occupy 4 input bits
 - Undervoltage of valves
 - Undervoltage of sensors
 - Short circuit at outputs
- I/O allocation, self-configuration
- Subsequent addition of input or output modules moves the addressing (I/O allocation) forwards
- I/O allocation of inputs and outputs independent from each other
- 4-fold and 8-fold input modules connect to the next Half-Byte (nibble)
- Electrical outputs connect to the next Half-Byte (nibble) on the valves.

Counting mode:
Valves from left to right, then from the next Nibble electrical outputs from right to left

- Max. 12 modules are permitted on the left (electrical) side

Modular electrical peripherals, for type 03/04

Peripherals overview – Control block

Equipping with control block

- 1 Input/output module
- 2 Analogue stage
- 3 Output module
- 4 Input module
- 5 Electrical interface for CP interface
- 6 Control block
- 7 Connection side for pneumatics

Modular electrical peripherals for type 03/04 can be equipped with various control blocks. In addition to controlling the valves and outputs, corresponding sensor feedback can be recorded at the electrical peripherals and processed autonomously with the integrated PLC. Additional expansion and networking is possible via the fieldbus.

The following applies to control blocks:

- Max. 26 valve solenoid coils
- Max. 96 local inputs
- Max. 48 local outputs
- Max. 48 analogue channels (SF3)
- CP interface for 64 inputs and 64 outputs (decentralised 2 ... 10 m per string)
- I/O allocation of inputs and outputs independent from each other
- I/O allocation, self-configuration
- 4-fold and 8-fold input modules connect to the next Half-Byte (nibble)
- Electrical outputs connect to the next Half-Byte (nibble) on the valves.
Counting mode: Valves from left to right, then from the next Nibble electrical outputs from right to left
- Max. 12 modules are permitted on the left (electrical) side
- Subsequent addition of input or output modules or valves moves the addressing (I/O allocation) forwards

Modular electrical peripherals, for type 03/04

Technical data – Bus node IFB5-03

FESTO

FESTO

MOELLER 

ABB

This bus node handles communication between the modular electrical peripherals and a higher-order master.

For the modular electrical peripherals, this module provides the separate electrical system supply for

- the electronics modules and sensor supply, and
- the load current of the electrical outputs and valves.

The bus node supports three different company-specific fieldbus protocols, based on a floating RS485 connection.

The required protocol is selected by means of switch settings.

- Festo fieldbus
- ABB CS31
- Moeller SUCONET K

Application

Bus connection

The bus connection on the IFB5-03 is established by means of two 4-pin M12 plugs with four connections. The two plugs are connected internally, so that either a branch line installation can be performed with one cable,

or 2 cables can be routed to the bus node, connected to the two plugs and looped through.

Implementation

The IFB5-03 supports the digital input and output modules and the solenoid coils. It does not support analogue modules.

It can service a total of 64 digital outputs, of which max. 26 can include solenoid coils, and 60 digital inputs.

Note

Please observe the general guidelines on I/O addressing when assigning the outputs.

Modular electrical peripherals, for type 03/04

Technical data – Bus node IFB6-03

This bus node handles communication between the modular electrical peripherals and a higher-order master.

For the modular electrical peripherals, this module provides the separate electrical system supply for

- the electronics modules and sensor supply, and
- the load current of the electrical outputs and valves.

Application

Bus connection

The bus connection is established via two 9-pin M23 connections with a typical Interbus pin allocation.

The plug and socket are labelled with Remote IN and Remote OUT in accordance with the definition for the Interbus remote bus.

Both bus cables are always routed to the bus node and looped through in accordance with the ring structure of the Interbus.

Implementation

The IFB6-03 supports the digital input and output modules and the solenoid coils. It also supports analogue modules. It can service a total of 64 digital outputs, of which max. 26 can include

solenoid coils, and 60 digital inputs. The FB6 supports max. 8 analogue input channels and 8 analogue output channels. The analogue channels are operated

in multiplex mode and occupy 16 process data bits. The number of possible digital inputs and outputs is reduced by 16 bits when analogue modules are used.

Note

Please observe the general guidelines on I/O addressing when assigning the outputs.

Modular electrical peripherals, for type 03/04

Technical data – Bus node IFB8-03

FESTO

This bus node handles communication between the modular electrical peripherals and a higher-order master.

For the modular electrical peripherals, this module provides the separate electrical system supply for

- the electronics modules and sensor supply, and
- the load current of the electrical outputs and valves.

The bus node supports the 1771 Remote I/O fieldbus from Allen Bradley/Rockwell Automation.

Application

Bus connection

The FB8 bus node has 2 M12 plugs with 4 connections for connecting to the Remote interface.

The two plugs are connected internally, so that either a branch line installation can be performed with one

cable, or 2 cables can be routed to the bus node, connected to the two plugs and looped through.

Implementation

The IFB8-03 supports the digital input and output modules and the solenoid coils. It does not support analogue modules.

It can service a total of 64 digital outputs, of which max. 26 can include solenoid coils, and 60 digital inputs.

The CP interface module can be connected as an alternative if the CP installation system is used, however this mode of operation does not support the direct mounting of valves and input/output modules.

Note

Please observe the general guidelines on I/O addressing when assigning the outputs.

Modular electrical peripherals, for type 03/04

Technical data – Bus node IFB11-03

This bus node handles communication between the modular electrical peripherals and a higher-order master.

For the modular electrical peripherals, this module provides the separate electrical system supply for

- the electronics modules and sensor supply, and
- the load current of the electrical outputs and valves.

Application

Bus connection

The DeviceNet connection is established via a 5-pin M12 plug with pins that corresponds to the specific mini connector.

A DeviceNet installation with a higher degree of protection is typically laid using main and branch lines that are connected via T-pieces.

Various manufacturers such as Turck, Lumberg and Rockwell offer finished cables and terminating resistors.

The terminating resistors are attached to the two outermost T-pieces. This installation technique keeps the bus closed while a bus station is being removed.

Implementation

The IFB11-03 supports the digital input and output modules, the solenoid coils and the analogue modules. It can service a total of 60 digital inputs and 64 digital outputs, of which

max. 26 can include solenoid coils. Together with the analogue modules, this bus node services max. 8 output and 8 input channels. 16 inputs and

16 outputs are always occupied if analogue modules are used, regardless of the number of analogue channels used.

Note

Please observe the general guidelines on I/O addressing when assigning the outputs.

Modular electrical peripherals, for type 03/04

Technical data – Bus node IFB13-03

FESTO

Bus node for handling communication between the modular electrical peripherals and a higher-order master via Profibus DP.

For the modular electrical peripherals, this module provides the separate electrical system supply for

- the electronics modules and sensor supply, and
- the load current of the electrical outputs and valves.

The status of the voltage supplies and the bus communication is indicated via the LEDs Power, Power Valves and Bus Error.

Application

Bus connection

The bus connection is established via a 9-pin Sub-D socket with a typical Profibus allocation (to EN 50 170).

The bus connector plug (with protection class IP65 from Festo or IP20 from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable.

An active bus terminal can be connected using the integrated DIL switch. The Sub-D interface is designed for the control of network components with a fibre optic cable connection.

-  - Note

A "Reverse Key" connection can be established via a 2x M12 adapter plug (B-coded).

Implementation

The IFB13-03 supports digital input and output modules and solenoid coils. Analogue modules can also be used.

- 74 digital outputs in total, of which

max. 26 solenoid coils.

- Max. 92 digital inputs for recording sensor signals.

The bus node supports max. 12 ana-

logue input/output channels. Analogue modules occupy a discrete address space, separate from the digital inputs and outputs.

-  - Note

Please observe the general guidelines on I/O addressing when assigning the outputs.

ASA

This bus node handles communication between the modular electrical peripherals and a higher-order master.

For the modular electrical peripherals, this module provides the separate electrical system supply for

- the electronics modules and sensor supply, and
- the load current of the electrical outputs and valves.
- The ASA fieldbus standard (FIPIO) works with a constant transfer rate of 1Mbit/s and is primarily supported on the master side by the Telemecanique and April controllers.
- LED displays on the bus node show the current status of communication on the bus and indicate the presence of various device errors within the valve terminal.

Application

Bus connection

The bus connection on the IFB16-03 is established via two 4-pin M12 plugs that are bridged within the bus node. This means that the bus can be inter-

connected in a serial arrangement with an incoming and an outgoing bus cable or connected to the bus via a

branch line.

The bus address is set by means of 2 rotary switches on the bus node. The

error characteristics of the outputs and the solenoid coil actuator can also be set on the node.

Implementation

The IFB16-03 supports the digital input and output modules and the solenoid coils. It can service a total of 60 digital inputs and 64 digital out-

puts, of which max. 26 can include solenoid coils.

The CP interface module can be connected as an alternative if the CP in-

stallation system is used, however this mode of operation does not support the direct mounting of valves.

Note

Please observe the general guidelines on I/O addressing when assigning the outputs.

Modular electrical peripherals, for type 03

Technical data – Bus node IFB21-03

This bus node handles communication between the modular electrical peripherals type 03 and a higher-order master.

For the modular electrical peripherals, this module provides the separate electrical system supply for

- the electronics modules and sensor supply, and
- the load current of the electrical outputs and valves.
- Interbus with Rugged Line fibre optic connection

Application

Bus connection

The bus connection is established via two Rugged Line fibre optic connections (power supply 5-pin, data fibre optics, typical Interbus allocation). The IFB21-03 corresponds to an Interbus remote bus station.

It supports the transfer of data via fibre optic cables with optical regulation of the individual transmission lengths and the looping through of the

power supply from valve terminal to valve terminal. The power supply is connected via Quickon.

Implementation

The IFB21-03 supports the digital input and output modules and the solenoid coils. It also supports analogue modules. It can service a total of 96 digital outputs, of which

max. 26 can include solenoid coils, and 92 digital inputs. The IFB21-03 supports max. 8 analogue input channels and

8 analogue output channels. The analogue channels are operated in multiplex mode and occupy 16 process data bits.

Note

Please observe the general guidelines on I/O addressing when assigning the outputs.

Modular electrical peripherals, for type 03/04

Technical data – Control block ISF3-03

FESTO

FESTO

A powerful mini controller from Festo has been integrated in the ISF3-03 control block and built into a robust aluminium housing with the protection class IP65. This permits stand-alone control of up to 128 inputs and outputs.

Application

All plugs and electrical connections are designed for direct mounting on the machine outside of the control cabinet (provided that the requirements of IP65 are adhered to). With the Festo fieldbus, additional I/Os and expanded functions can be installed and controlled. The control block ISF3-03 can be operated as required in stand-alone mode, as a

fieldbus slave or fieldbus master with up to 31 fieldbus slaves. This controller is programmed via an RS232 programming interface using the software FST200. Alternatively, a display and control unit can be directly connected on-site. The control block ISF3-03 is a highly compact solution; a stand-alone controller for directly mounted valve

terminals of the type 03/04 or for CP valves and CP I/O modules indirectly connected via the CP installation system. The elimination of internal wiring to the controller reduces the number of connection points required, thereby shortening the installation time and eliminating sources of potential

errors.

The performance of the controller technology was selected and specially customised to meet the requirements of a valve terminal. Extensive diagnostic information provides information on the status of all components mounted on the valve terminal as well as the sensors and actuators connected to it.

Operating modes

Stand-alone

Valve terminal with control block ISF3-03 for controlling a stand-alone machine. Can be used to autonomously control small stand-alone machines or system components. It can also be used to realise stand-alone subsystems with a discrete function as part of a larger system.

Master

Control block ISF3-03 with a fieldbus extension for controlling systems. The control block ISF3-03 with integrated fieldbus interface facilitates the connection of local inputs and outputs as well as further fieldbus stations. It

can also be used to process automation tasks requiring a large number of electrical sensors and actuators. It can also be used to realise stand-alone subsystems with a discrete function as part of a larger system.

FESTO

Function

Digital input modules facilitate the connection of proximity sensors or other 24 V DC sensors (inductive, capacitive, etc.).

Plugs with double allocation are separated using a DUO plug or DUO cable. These modules cannot be operated on the multi-pin node with inputs.

Applications

- Input modules for 24 V DC sensor signals
- M12 plug, single allocation connection technology in 4-fold modules, double allocation connection technology in 8-fold modules
- M12 plug, 5-pin
- The input statuses are indicated for each input signal at an allocated LED
- 24 V DC supply provided for all connected sensors
- Module width: 36 mm

Technical data – Input module, digital, 16-fold

FESTO

Function

Sensor signals in groups of up to 8 or 12 are recorded by multi-pin distributors and forwarded to the module via a multi-pin cable.

Applications

- Input modules for 24 V DC sensor signals
- 2 connector plugs, Sub-D 15-pin socket
- Ready for installation for multi-pin distributors with up to 8 or 12 inputs
- Allocation of the plug variables
 - 8 inputs on top and 8 inputs on bottom
 - 12 inputs on top and 4 inputs on bottom
- The input statuses are indicated for each input signal at an assigned LED
- 24 V DC voltage supplied separately for both plugs, with separate electronic fuse
- Module width: 36 mm

Modular electrical peripherals, for type 03/04

Technical data – Output module, digital

Function

The electrical outputs control actuators such as individual valves, hydraulic valves, heating controllers and many more.

Note

Valves with M12 central plug, optimum control.

Applications

- Output module with 4 outputs 24 V DC
- M12 connection technology, with 5-pin sockets
- LED display of the switching status per channel
- Short circuit and overload detection per output
 - Separate malfunction display for each channel by means of red LED
 - Diagnostic message about system status to controller

Modular electrical peripherals, for type 03/04

Technical data – Input/output module

Function

Digital input modules facilitate the connection of proximity sensors or other 24 V DC sensors (inductive, capacitive, etc.).
The electrical outputs control actuators such as individual valves, lamps and a host of other devices. The I/O module occupies 3 module positions.
Its electrical isolation makes it suitable as a coupling connection to external circuits.

Applications

The I/O module combines 12 inputs and 8 outputs in one module with a width of 72 mm. The connection is established via a pre-assembled 25-pin Sub-D plug with multi-pin cable. 24 V DC internal supply to the sensor connections. The switching status displays for the inputs/outputs are shown on assigned LEDs.
4 outputs are combined into a group and supplied externally with 24 V DC. The inputs and outputs are electrically isolated from the node.

Modular electrical peripherals, for type 03/04

Technical data – Analogue stage

Function

Analogue signals, as well as digital inputs and outputs, are required in many areas of automation. Special analogue stages are provided for these tasks which are capable of processing both analogue input signals, e.g. setpoint specifications and feedback on actual values (temperature, pressure, flow rate, fill-level, etc.), as well as analogue outputs for controlling actuators. The analogue stages are specially prepared for the connection of proportional valves¹⁾.

Applications

- 6-pin push-in connectors to DIN 45 332
- Diagnostic LED to indicate readiness for service and overload
- Voltage supplied for all connected sensors

Three analogue stages are available for different fields of application:

- VIAP-03-FB, optimised for proportional valves
 - 1 analogue input (4 ... 20 mA)
 - 1 analogue output (4 ... 20 mA)
- VIAU-03-FB-I, universal module for current signals
 - 3 analogue inputs (4 ... 20 mA)
 - 1 analogue output (4 ... 20 mA)
- VIAU-03-FB-U, universal module for voltage signals
 - 3 analogue inputs (0 ... 10 V)
 - 1 analogue output (0 ... 10 V)

1) Not suited for MPPEs

Technical data – Electrical interface for CP interface

Function

The CP interface electrical interface module establishes the connection to a CP installation system. I/O data from the CP installation system is transferred to the connected bus node, and then to the higher-order controller via the fieldbus.

As well as transmitting the communication data, the max. 4 CP strings also transmit the supply voltage to the connected sensors and the load supply to the valves. The two circuits are isolated and are supplied with power by the connected bus node or control block.

Applications

The following bus nodes/control blocks support the CP interface electrical interface.

Bus nodes:

- IFB8-03 1771 Remote I/O
- IFB16-03 ASA (FIPIO) bus

The CP interface electrical interface occupies one bus node exclusively. Additional local valves or further electrical I/O modules cannot be connected.

Control blocks:

- ISF3-03 Festo machine controller
- Further local valves or electrical I/Os can be connected.

Technical data – Multi-pin distributor

Function

MPV multi-pin distributors are suitable for the distribution of input and output signals to PNP sensors and solenoid valves via the M12/M8 plugs. The multi-pin distributors, in conjunction with the input module VIGE-03-FB-16-SUBD-S (→ 58), collect the sensor signals directly in the machine and forward them to the input module on the 15-pin Sub-D sockets via a multi-pin cable.

- LED for signal status display
- Only one cable to installation location
- A broad range of accessories

Type MPV-E/A...-M8

The multi-pin distributor facilitates the connection of max. 8 or 12 input signals to 3-pin M8x1 plugs. The connecting cable KMPV-SUB-D-15-..., pre-assembled at one end, with the 15-pin Sub-D socket is connected to the multi-pin distributor. The open end of the cable is fitted with the plug socket SD-SUB-D-ST15 and connected to the input module.

Type MPV-E/A08-M12

Connection of max. 8 input signals to 5-pin M12 plug. The connecting cable is permanently attached to the multi-pin distributor. The open end of the cable is fitted with the plug socket SD-SUB-D-ST15 and connected to the input module. Switching status display via yellow LED. Sensor voltage display via green LED.

Product Range and Company Overview

A Complete Suite of Automation Services

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services

Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drives

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
