

Rotary modules ERMB, electric

# Rotary modules ERMB, electric

Key features

## At a glance

The rotary module ERMB facilitates unlimited and flexible rotation angles. The output interface is the same as on the semi-rotary drive DRQD.

The motor's power is transmitted to the output pinion by means of a circulating toothed belt with a specific transmission ratio. The drive and

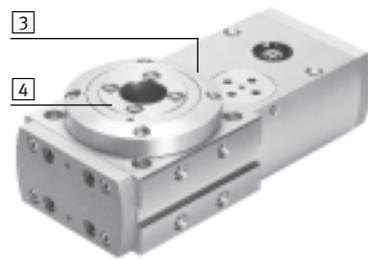

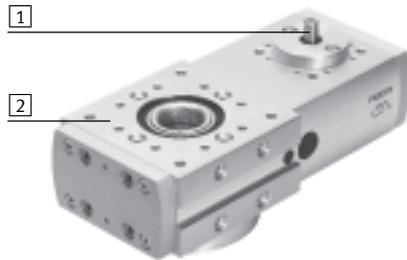

output pinions run on separate bearings. The toothed belt is pretensioned at the factory by means of an eccentric tensioning roller.

Advantages:

- Stable arrangement of the output shaft bearings
- Pretensioned toothed belt means zero backlash
- Compact design

## The technology in detail

- 1 Interface with the motor, via axial kit
- 2 Mounting interface
- 3 Mounting for proximity sensor SIEN in the retaining ring
- 4 Output interface: Same as on the semi-rotary drive DRQD (with larger through-hole)

## Sensing kit EAPS as an accessory

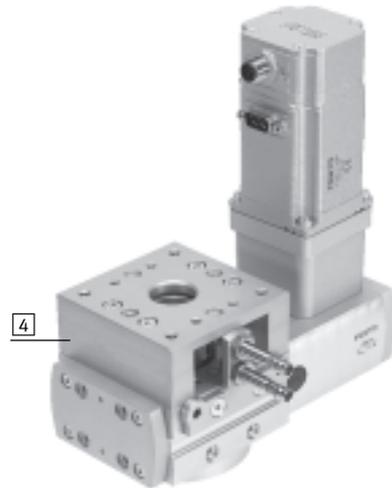

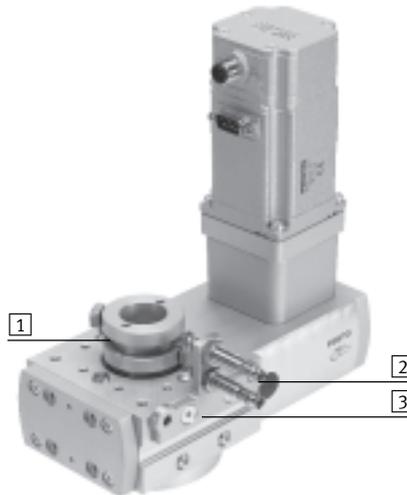

→ 14

The sensing kit facilitates monitoring of the angle of rotation using adjustable cams. It can also be used for reference checking.

Without housing

With housing

- 1 Trip cam support
- 2 Proximity sensor SIEN
- 3 Sensor bracket
- 4 Housing

## Mounting and installation options

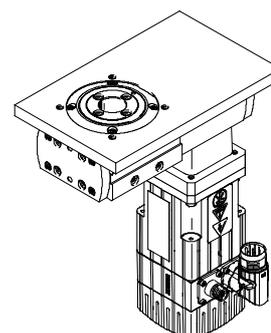

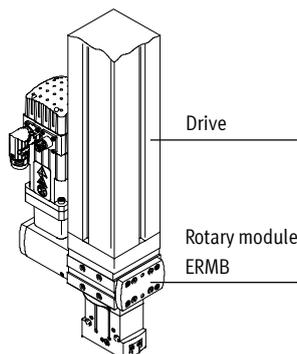

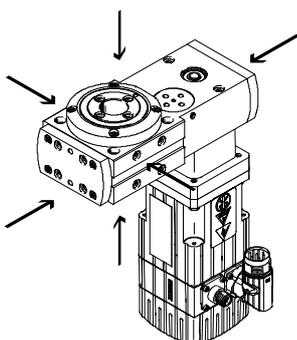

Mounting option

Installation option

The rotary module can be attached on six sides.

As a front end

As a rotary table in a plate

# Rotary modules ERMB, electric

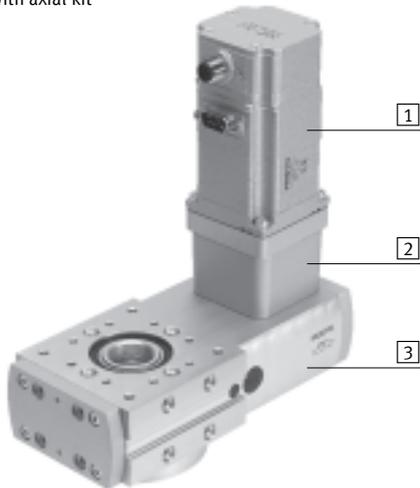

Key features

## Total system comprising rotary module, motor and axial kit

Rotary module

→ 6

With axial kit

- 1 Motor
- 2 Axial kit
- 3 Rotary module

## Motors

→ 16

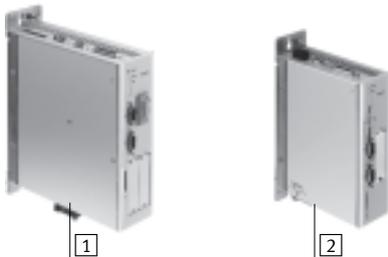

- 1 Servo motor EMMS-AS
- 2 Stepper motor EMMS-ST
- 3 Motor unit MTR-DCI

 Note  
A range of specially adapted complete solutions is available for the rotary module ERMB.

## Motor controllers

Technical data → Internet: motor controller

- 1 Servo motor controller  
CMMP-AS, SEC-AC
- 2 Stepper motor controller  
CMMS-ST

## Axial kit

→ 16

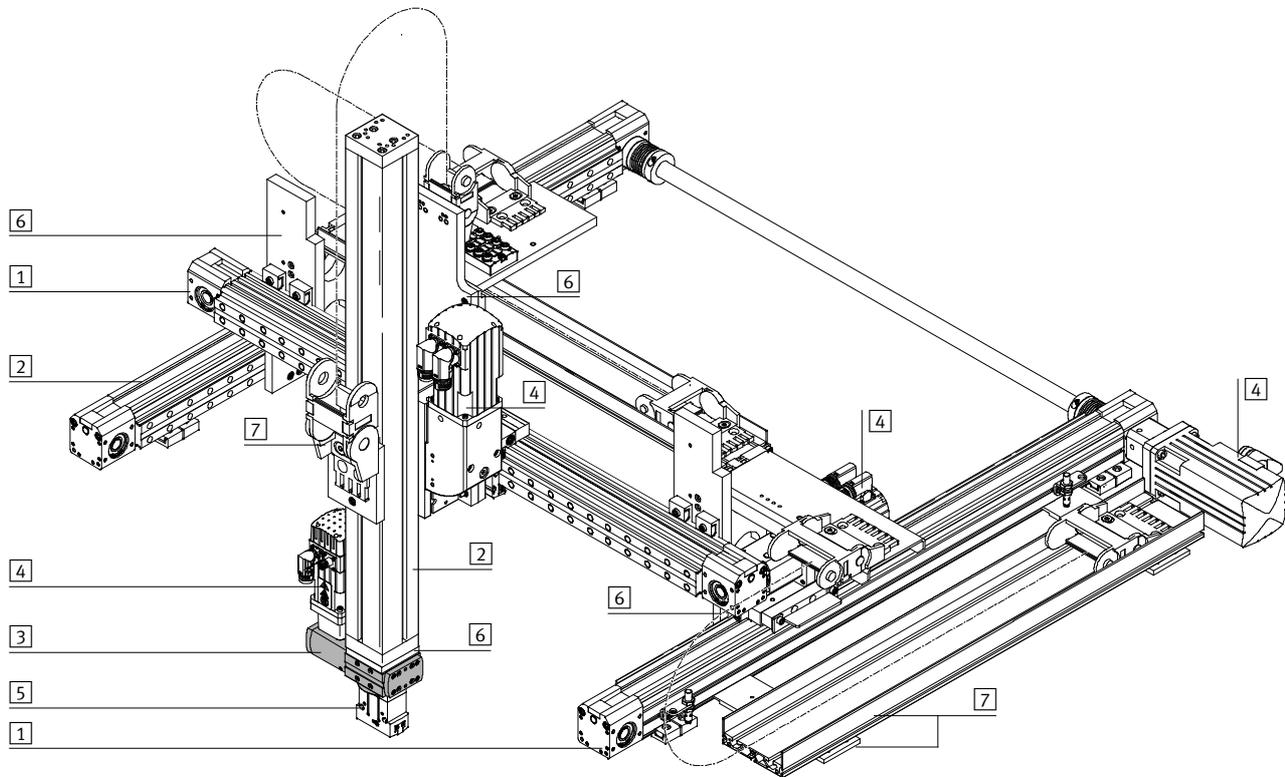

- Kit comprising:
- Motor flange
  - Coupling housing
  - Coupling
  - Screws

Technical data

## Materials

Sectional view

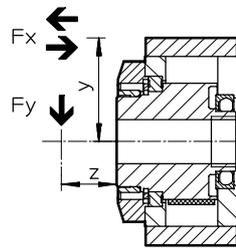

## Rotary module

1	End cap	Anodised aluminium
2	Output shaft	Wrought aluminium alloy, anodised
3	Housing	Wrought aluminium alloy, anodised
4	Drive shaft	High-alloy stainless steel
5	Toothed belt	Polychloroprene with glass fibres
-	Note on materials	Contains paint wetting impairment substances

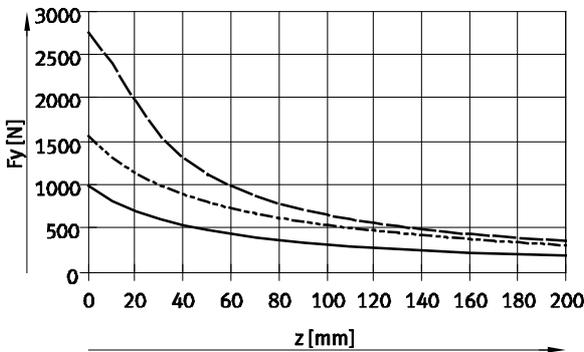

## Maximum radial and axial force Fx/Fy on the output shaft as a function of the distance y/z

If the rotary module is subjected to several forces at once, the following equation must be satisfied in addition to the maximum loads indicated below.

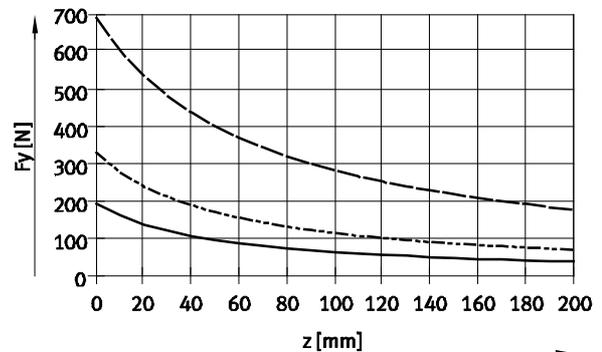

$$\frac{F_{y(z)}}{F_{y, \max. (z)}} + \frac{F_{x, \text{pushing} (y)}}{F_{x, \text{pushing}, \max. (y)}} + \frac{F_{x, \text{pulling} (y)}}{F_{x, \text{pulling}, \max. (y)}} \leq 1$$

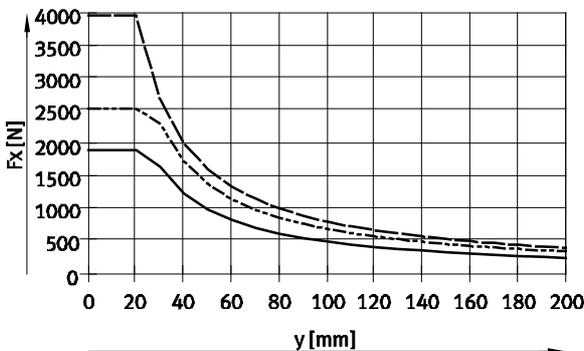

### Max. radial force Fy, static

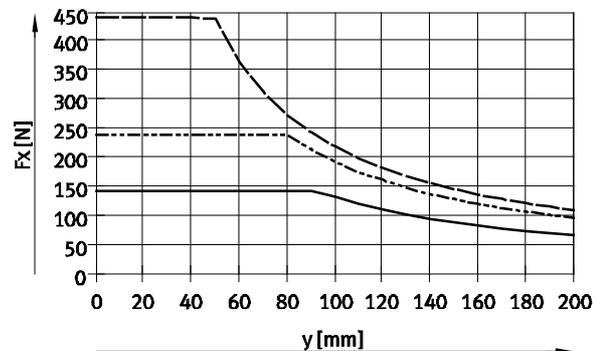

### Max. radial force Fy, dynamic

### Max. axial force Fx, static, pushing and pulling

### Max. axial force Fx, dynamic, pushing and pulling

Technical data

## Positioning time $t$ as a function of the rotation angle $\alpha$ in combination with motor EMMS-.../motor unit MTR-DCI-...

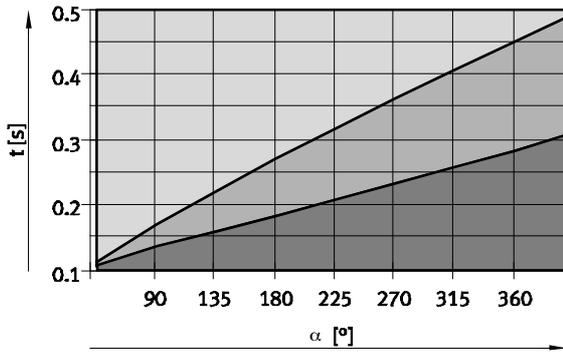

Size 20

with servo motor EMMS-AS

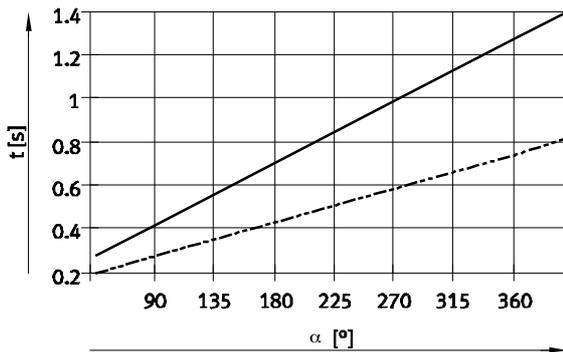

- Extended operating range
- Typical operating range, depending on motor size and load inertia
- Unrealisable range

with stepper motor EMMS-ST

- Extended operating range
- Typical operating range, depending on motor size and load inertia
- Unrealisable range

with motor unit MTR-DCI

- Limit line for MTR-DCI-32-G14 at 0 ... 200 kgcm<sup>2</sup>
- - - Limit line for MTR-DCI-32-G7 at 0 ... 50 kgcm<sup>2</sup>

-  - Note

The positioning time  $t$  ends with the controller signal MC (motion complete), i.e. on the drive side. Increased positioning times are to be expected at the output shaft depending on the motor type and eccentricity of the moving load.

For servo motor: 50 ... 100 ms  
For stepper motor: 100 ... 200 ms

-  - Note

The "PositioningDrives" design tool compiles the optimum combination of rotary module and motor for the respective application with respect to mass moment of inertia, positioning time and positioning accuracy.

# Rotary modules ERMB, electric

Technical data

## Information on service life characteristic values

Within the framework of product qualification, the specified statistic load changes/switching cycles were achieved with 3 samples.

### Definition of load change/switching cycle:

A switching cycle corresponds to two load changes: position A to position B and back.

Size		20	25	32
Guide value load changes	[Mio.]	30	40	40
Guide value switching cycles	[Mio.]	15	20	20
Mass moment of inertia at output	[kgcm <sup>2</sup> ]	24	80	400
Medium angle acceleration at output	[°/sec <sup>2</sup> ]	28,000	20,000	12,000
Maximum angle speed at output	[°/sec]	1,800	1,800	1,800

The above specified statistic load change/switching cycles were achieved under the following defined operating conditions: horizontally hanging fitting, 180° swivel angle,

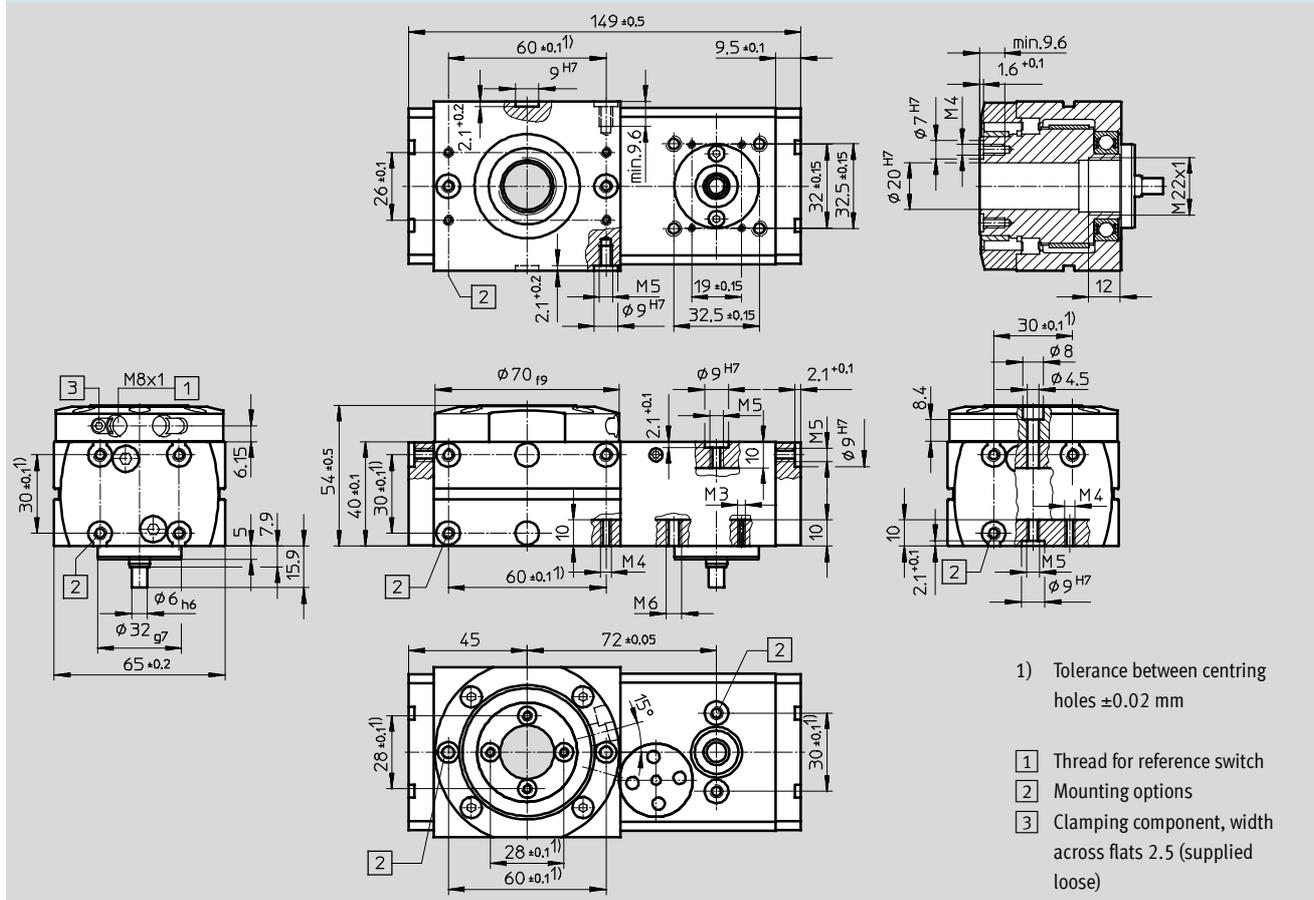

frequency 2 Hz, mass moment of inertia, acceleration (jerk-free) and max. angle speed as specified in the table, room temperature (23 ± 5) °C.

Under different operating conditions, a shorter or longer service life is possible. The conditions of use and safety regulations specified in the product documentation must also be taken into account.
