

Valve terminals VTUB-12

FESTO

Valve terminals VTUB-12

Key features

FESTO

Innovative

- Cost-effective I-Port interface for fieldbus nodes (CTEU)
- IO-Link mode for direct connection to a higher-level IO-Link master
- Lower installation costs thanks to multi-pin plug connection
- Valve terminal for a wide range of pneumatic applications
- Minimal space requirement
- Great flexibility during planning, assembly and operation
- Pneumatic distributor integrated on the valve terminal
- Use in dusty environments

Versatile

- Room for expansion with up to 35 valve positions on one valve terminal
- Flexibility of the pneumatic working lines provides a practical solution to different requirements
- Quick and easy replacement of fittings
- Optional manifold rail variant with LED signal status display

Reliable

- Manual override
- Durable
- Sturdy thanks to the polymer housing and metal manifold rail

Easy to mount

- Ready-to-install and tested unit
- Lower ordering, installation and commissioning costs
- Quick and secure installation thanks to integrated QS push-in connectors
- Easy valve assembly with just one screw

Note

Valve terminals VTUB-12

Key features

FESTO

Equipment options

Valve functions

- 5/2-way valve, single solenoid
- 5/2-way valve, double solenoid
- 3/2-way valve can be created from a 5/2-way valve using blanking plugs

Electrical connection options

Multi-pin plug

- Sub-D, 25-pin
- Sub-D, 44-pin
- 2 ... 35 valve positions/
max. 35 solenoid coils

I-Port

- Fieldbus connection (CTEU)
- IO-Link mode
- 3 ... 35 valve positions/
max. 35 solenoid coils

Valve terminals VTUB-12

Key features

FESTO

Pneumatic distributor

The pneumatic distributor supplies the operating pressure from port 1 to up to four other ports. The pneumatic

distributor has integrated QS4 or QS6 connections.

Note

Number of pneumatic distributors that can be used

→ Page 8 Pilot air supply

Selector plate/pilot control with external pilot air (optional)

The VTUB-12 is intended for use with pilot air. It can be operated with external pilot air by mounting the selector plate

VABF-C8-12-P6-...-Z instead of the blanking plate. The pilot air is then supplied via port 12/14 on the selector plate.

Manifold rail with multi-pin plug connection

The manifold rail features a groove into which the semi in-line valves are latched and secured with just one screw.

The valve functions 3/2-way, normally closed or normally open, 5/2-way single solenoid and 5/2-way double solenoid are available.

The valves can be supplied as semi in-line valves with cartridges QSP for tubing diameters 4 and 6 mm.

Manifold rail with optional LED signal status display

The manifold rail with multi-pin plug can optionally be ordered with LEDs (code L).

These indicate the signal states of the solenoid coils.

Manifold rail with I-Port interface

The manifold rail can be ordered with I-Port interface (code PT) and IO-Link (code LK) as a basis for fieldbus

nodes (CTEU) or in IO-Link mode for direct connection to a higher-level IO-Link master.

Sub-base for semi in-line valve

The valve VUVB-12 can be operated as an individual valve using an individual sub-base (single width for single solenoid valves or

double width for double solenoid valves). The power is supplied via the plug socket with cable KMYZ and the adapter (M8x1)

with corresponding connecting cable (→ accessories, p. 33)

Blanking plate

Plate without valve function for reserving valve positions on a valve terminal.

Valves and blanking plates are attached to the manifold rail using one screw.

Valve terminals VTUB-12

Peripherals overview

FESTO

Overview – Valve terminal VTUB-12

Valve terminal with electrical multi-pin plug connection

- Up to 20 valve positions/solenoid coils, 25-pin Sub-D multi-pin plug connection, code: M
- From 21 valve positions/solenoid coils, 44-pin Sub-D multi-pin plug connection, code: M

Valve terminals with electrical multi-pin plug connection are available in gradations from 2 to max. 35 valve positions.

Each valve position can either be equipped with a valve or a blanking plate. Double solenoid valves occupy two valve positions.

A maximum of 35 solenoid coils can be actuated via the electrical multi-pin plug connection.

Overview – Valve terminal VTUB-12

Valve terminal with I-Port interface

Valve terminals with electrical supply and transmission of communication data via M12 plugs on the valve terminal (I-Port connection,

code PT/LK) are available in gradations from 3 to max. 35 valve positions.

Each valve position can either be equipped with a valve or a blanking plate.

Double solenoid valves occupy two valve positions.

Valve terminals VTUB-12

Key features

FESTO

Multi-pin plug connection

Control signals from the controller to the valve terminal are transmitted via a pre-assembled multi-core cable, which substantially reduces installation time.

This valve terminal can be equipped with 2 ... 35 valves.

Versions

- Sub-D connection

I-Port interface/IO-Link

The electrical supply/transmission of communication data takes place via an M12 plug on the valve terminal (I-Port interface).

This valve terminal can be equipped with 3 ... 35 valves.

Versions:

- I-Port interface for fieldbus nodes (CTEU)
- IO-Link mode for direct connection to a higher-level IO-Link master

Pilot air supply

Internal

The port for the pneumatic main supply is located on the left-hand sub-base (multi-pin plug connection/I-Port interface).

The internal pilot air (duct 12/14) is branched from duct 1 in the left-hand sub-base.

The air is branched using a pneumatic distributor or a blanking plate on the left-hand pneumatic distributor port. The multi-pin plug connection provides two pneumatic distributor ports and the I-Port provides one.

External

External pilot air is supplied via the selector plate on the left-hand pneumatic distributor port. It enables the pilot air and main supply to the valve terminal to be separated.

The multi-pin plug connection provides one pneumatic distributor port and the I-Port interface does not provide any.

Valve terminals VTUB-12

Key features – Pneumatic components

FESTO

Wide range of pneumatic components

- The use of the same basic valves for the 3/2-way and 5/2-way valve function permits fast and flexible conversion and multiple use of parts.
- Flexible construction thanks to assembled and tested units or single components as modules for individual configurations.
- Flow rates from 230 ... 400 l/min depending on the valve used and appropriate QS connections.

Changing fittings on port 2/4

The cartridges (port 2/4) can be changed quickly and easily by removing the spring clip. The ports can be sealed by inserting a blanking plug (→ 34).

Connection to the valve

Connection positions on the valve:

- T (on top, straight)
- TA (on top, angled outlet to the front)
- TB (on top, angled outlet to the front/rear)
- TC (on top, angled outlet to the rear)

Connection sizes:

- Push-in connector 4 mm (code P4)
- Push-in connector 6 mm (code P6)

Valve terminals VTUB-12

Key features – Pneumatic components

FESTO

Design

Valve replacement

The valves are attached to the aluminium manifold rail using one screw, which means that they can be easily

replaced. Use of high-quality plastics guarantees minimum weight and maximum performance.

Expansion

Blanking plates can be replaced by valves at a later date. The dimensions, mounting points and the pneumatic

installation already carried out do not change.

Valve function				
Code	Circuit symbol	Width		Description
		12 mm	24 mm	
M		■	–	5/2-way valve, single solenoid <ul style="list-style-type: none"> • Mechanical spring return • Non-reversible • Not suitable for vacuum

N		■	–	3/2-way valve, single solenoid <ul style="list-style-type: none"> • Normally open • Mechanical spring return • Non-reversible • Not suitable for vacuum
K		■	–	3/2-way valve, single solenoid <ul style="list-style-type: none"> • Normally closed • Mechanical spring return • Non-reversible • Not suitable for vacuum

Valve terminals VTUB-12

Key features – Display and operation

FESTO

Display and operation

- 1 Manual override (non-detenting, non-detenting/detenting)
- 2 Screw for valve assembly

The manual override (MO) enables the valve to be activated without electronic control or power supply.

Manual override (MO)

MO with automatic return (non-detenting)

Press in the stem of the MO with a pointed object or screwdriver.
 → Valve is then actuated.
 Remove the pointed object or screwdriver.
 Spring force pushes the stem of the MO back.
 → Valve returns to normal position.

MO set via turning (non-detenting/detenting)

Press in the stem of the MO using a screwdriver until the valve switches and then turn the stem clockwise by 90° until the stop is reached.
 → Valve remains in switching position.
 Turn the stem anti-clockwise by 90° until the stop is reached and then remove the screwdriver. Spring force pushes the stem of the MO back.
 → Valve returns to normal position.

Note

A manually actuated valve (manual override) cannot be reset electrically. Conversely, an electrically actuated valve cannot be reset using the mechanical manual override.

Mounting – Valve terminal

Sturdy terminal mounting thanks for four through-holes for wall mounting (M5 screws).

Valve terminals VTUB-12

Key features – Electrical components

FESTO

Protective circuit

Manifold rail with LED signal status display, multi-pin plug connection

Note

The electrical protective circuit only relates to the optional LED variant with the multi-pin plug connection.

Electrical multi-pin plug connection

The following multi-pin plug connections are available for the valve terminal VTUB-12:

- Sub-D multi-pin plug connection (25-pin)
- Sub-D multi-pin plug connection (44-pin)

If fewer than 44 addresses are used for the valve terminal, the remaining pins are left free. Pins 22 ... 25 or 41 ... 44 are reserved for the neutral conductor or 24 V.

The valves are switched by means of positive or negative logic (positive switching or negative switching).

Mixed operation is not permitted.

Each pin on the multi-pin plug can actuate exactly one solenoid coil. If the maximum configurable number of valve positions is 35, this means that 35 valves can be addressed with one solenoid coil (single solenoid).

Note

A double solenoid valve occupies two valve positions. With 17 or more valve positions, the number of available valve positions for double solenoid valves decreases.

Pins 1 ... 44 are used for addresses 0 ... 43 in order.

Protective circuit

Manifold rail with I-Port interface

I-Port interface

The valve terminal VTUB-12 can be connected as follows via the I-Port:

- Directly to the fieldbus by mounting the CTEU bus node on the valve terminal
- To an IO-Link master (in IO-Link mode) via a cable

Up to 35 solenoid coils can be actuated. A valve position always occupies one address. The following allocation applies in this case:

- Less significant valve position (address) for coil 14
- More significant valve position (address) for coil 12

Addresses are allocated in ascending order without gaps, from left to right. The address allocation is independent of whether blanking plates or valves are used.

Valve terminals VTUB-12

Key features – Instructions for use

FESTO

Equipment

Operate system equipment with unlubricated compressed air if possible. Festo valves and cylinders are designed so that, if used as designated, they will not require additional lubrication and will still achieve a long service life. The quality of compressed air downstream of the compressor must correspond to that of unlubricated compressed air. If possible, do not operate all of your system equipment with lubricated compressed air. The lubricators should, where possible, always be installed directly upstream of the actuator used.

Incorrect additional oil and too high an oil content in the compressed air reduce the service life of the valve terminal.
Use Festo special oil OFSW-32 or the alternatives listed in the Festo catalogue (as specified in DIN 51524 HLP32; basic oil viscosity 32 CST at 40 °C).

Bio-oils

When using bio-oils (oils which are based on synthetic or native ester, e.g. rapeseed oil methyl ester), the maximum residual oil content of 0.1 mg/m³ must not be exceeded (see ISO 8573-1 Class 2).

Mineral oils

When using mineral oils (e.g. HLP oils to DIN 51524, parts 1 to 3) or similar oils based on poly-alpha-olefins (PAO), the maximum residual oil content of 5 mg/m³ must not be exceeded (see ISO 8573-1 Class 4). A higher residual oil content irrespective of the compressor oil cannot be permitted, as the basic lubricant would be flushed out over time.

Valve terminals VTUB-12

Technical data – Bus node CTEU-CO

The bus node handles communication between the valve terminal and a higher-level CANopen® master.

The module has basic diagnostic functions. It has 5 integrated LEDs for on-site display. Up to 8 byte inputs and 8 byte outputs are typically transmitted in the cyclic process image.

Application

Fieldbus connection

The bus connection is established via a 9-pin Sub-D plug (pin) as per the CAN in Automation (CiA) specification DS 102 with additional 24 V CAN transceiver supply (option as per DS 102).

The bus connector plug (with protection class IP65/IP67 from Festo or IP20 from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable.

There are 4 contacts each available for the conductors (CAN_L/CAN_H and 24 V/0 V) of the incoming and outgoing bus cables.

The fieldbus parameters and the basic device parameter settings are set on the bus node via DIL switches.

Implementation

Protocol chip used:

- CAN transceiver 82C251

Baud rates supported:

- 125 kB
- 250 kB
- 500 kB
- 1 MB

Max. CANopen line length (trunk cable):

- 40 m at 1 Mbps
- 100 m at 500 kbps
- 250 m at 250 kbps
- 500 m at 125 kbps

Max. branch line length (drop cable):

- 0.30 m at 1 Mbps
- 0.75 m at 500 kbps
- 2 m at 250 kbps
- 3.75 m at 125 kbps

The following variants can be realised using an adapter:

- 2 x micro style M12, protection class IP65, 5-pin, socket and pin
- Open Style plug, protection class IP20, 5-pin, pin

Product Range and Company Overview

A Complete Suite of Automation Services

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services

Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drives

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
