

## Vacuum generators

Key features

## Product overview

All Festo vacuum generators have a single-stage design and operate according to the venturi principle. The product families described below have been designed for a wide range of applications. The different performance classes of the individual product families make it possible to select vacuum generators tailored to suit specific requirements.

Technical data → Internet: vn

#### Standard and inline ejectors VN-...

- Nominal size 0.45 ... 3 mm
- Max. vacuum 93%
- Temperature range 0 ... +60 °C

### VAD-.../VAK-..

- Nominal size 0.5 ... 1.5 mm
- Max. vacuum 80%
- Temperature range -20 ...+80 °C

- A range of extremely effective generators suitable for use directly in the workplace
- Available as straight or T-shaped housing
- Low space requirement
- Low-cost
- No wearing parts
- Extremely fast evacuation time
- Vacuum switch (optional)
- Optional with additional functions: integrated eject pulse
  - electric control for vacuum ON/OFF
  - combination of eject pulse and control

Technical data → Internet: vad

Subject to change - 2012/06

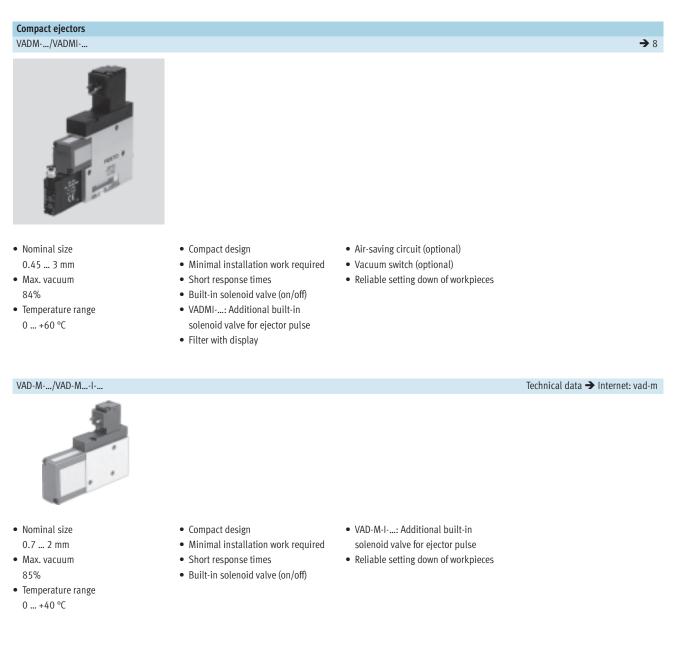

- Range of vacuum generators with sturdy aluminium casing
- VAK-...: Built-in reservoir VAD-...: Connection for additional

external reservoir

- Maintenance-free
- VAK-...: Reliable setting down of workpieces

## Vacuum generators

Key features

Features

#### At a glance

- Compact and sturdy design
- Components with numerous individual functions form a single unit
- Extremely short switching times thanks to integrated solenoid valves
- No external or additional components required
- dimensions and thereforeparticularly suitable for handlingoperationsCost effective assembly as the

• Easily fitted thanks to compact

- solenoid valve, vacuum generator and silencer are all in a single unit.
- Protection class IP65

- With manual override
- With integrated silencer for reducing exhaust noise
- With integrated filter for the air to be evacuated and a display window which shows the degree of filter contamination
- With or without integrated vacuum switch to monitor the vacuum with PNP or NPN output
- With 2 vacuum ports, optional

## Vacuum generator VADM-.../-...-P/-N The compressed air supply of these

vacuum generators is controlled by

switched on, the valve is actuated and

the flow of compressed air from 1 (P)

to 3 (R) generates a vacuum at port 2

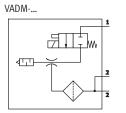

(V), operating on the ejector principle.

Suction stops when the supply power

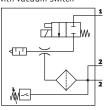

the built-in solenoid valve. When the electrical power supply is

to the valve is switched off. The integrated silencer reduces exhaust noise to a minimum. Built-in solenoid valve for:
 Vacuum ON/OFF

With the vacuum generators VADM-...-P/N the vacuum can be monitored by means of a vacuum switch.

VADM-...-P/-N with vacuum switch

1 = Pressure supply port

2 = Vacuum port

Compressed air enters the vacuum generator following the application of a voltage signal to the integrated solenoid valve, thereby creating a vacuum.

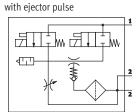

Once the voltage is switched off at the vacuum valve and switched on at the ejector valve, the vacuum is rapidly purged at port 2 as a result of the application of pressure. The integrated silencer reduces exhaust noise to a minimum.

## Two built-in solenoid valves for: Vacuum ON/OFF

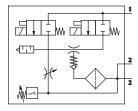

- Ejector pulse
- With sensing interface
  With integrated non-rotu
- With integrated non-return valve as safety function

With the vacuum generators VADMI-...-P/-N the vacuum can be monitored by means of a vacuum switch.

2 = Vacuum port

Features

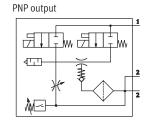

### Vacuum generator VADMI-...-LS-P/N with ejector pulse, vacuum switch and air-saving circuit

This vacuum generator is identically constructed to the other VADMI types. In addition, however, this ejector has a built-in vacuum switch with air-saving circuit:

If the vacuum level falls below the required range, vacuum generation is activated automatically (operating principle of vacuum switch for VADMI-...-LS-P/N  $\rightarrow$  13).

- Solenoid valve for vacuum
- generation
- Integrated silencer
- Integrated 40 µm filter with contamination indication
- With sensing interface for vacuum fault signal
- With integrated non-return valve as safety function
- With vacuum switch for pressure monitoring
- With 2 vacuum ports

Vacuum switch

The functional sequence

1

80

[%]

Once the vacuum level is within this range, reliable workpiece transport is guaranteed.

4

Hysteresis Hysteresis H H min. The vacuum generator VADMI is only activated by the external controller if the level drops below the minimum value and is deactivated again once that minimum value is regained. A non-return valve prevents the vacuum level from being purged during the inactive phase of vacuum generation.

#### Vacuum on

- 1 External controller F switches on the VG solenoid
  - → Valve for compressed air supply B is opened
  - Vacuum generation E is activated

#### Vacuum stop

- 2 The specified maximum level is achieved:
  - → Pressure sensor A sends a signal to the external controller
  - → Controller switches the VG solenoid off
  - Vacuum generation is interrupted
  - → Non-return valve D prevents the vacuum level from being purged
- Vacuum on
- 3 Leakage causes the vacuum level to drop to the minimum value
  - → Pressure sensor A sends a signal to the external controller F
  - → Controller F switches the VG solenoid B back on
  - ➔ Vacuum generation E is active again
  - → Constant repetition of points 2 and 3

## Cycle ended: Vacuum off

- 4 Transport process ended
  - → External controller (PLC) F deactivates VG solenoid B
  - → Vacuum generation E is ended
  - → External controller switches on ejector RP solenoid C
  - → Vacuum level at 0
  - ➔ Workpiece is released

- VG Vacuum on/off
- E Vacuum generator

Technical data

#### Function principle

In conjunction with the supplied cable set, the vacuum generator VADMI-...-LS-P/N contains an air-saving circuit. The vacuum range to be used to hold the workpiece is set on the switch using both potentiometers.

The switch generates a pulsating signal A2 which only actuates the solenoid for vacuum ON/OFF in the vacuum generator when the vacuum pressure has fallen below the selected upper limit value due to leakage etc.

At all other times, the vacuum is maintained with the help of the non-return valve, even when the vacuum generator is not switched on. In addition to this, status signal A1 can be interrogated which is connected to +24 V during normal operation, but which is switched to 0 whenever vacuum pressure falls below the critical value by 150 mbar due to a malfunction. This is the case, for example, if the workpiece has dropped off from the suction cup and it is no longer possible to generate the selected vacuum.

#### Accessories (included in scope of delivery):

• Connecting cable The switch may only be operated with the included cable set. Connections 1, 2 and 4 can nevertheless be interchanged with one another without damaging the device.

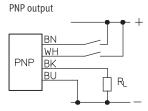

#### Vacuum switch control panel

- Brown: Positive terminal White: NC contact
  - Blue: Negative terminal
  - Black: NO contact

#### Switching points/hysteresis

Technical data

#### Energy-saving function and error reporting with VADMI-...-LS-P/N

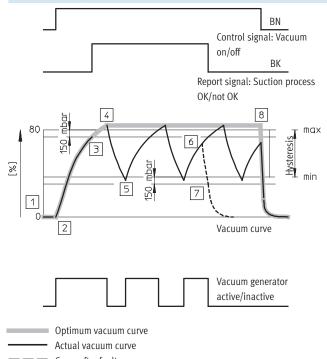

#### The further development of the vacuum switch

In addition to the described functions, error reporting is also used as an additional energy-saving measure. This like the vacuum circuit is controlled via the vacuum switch.

If a suction cup does not pick up a workpiece properly or a tube bursts, the vacuum switch can report such an event to the external control unit (PLC) F so that this or the user can take the necessary steps.

### Given the decentrally controlled switching function, external actuation of the vacuum circuit (air-saving circuit) would be superfluous. As a result there is significantly less wiring.

#### The functional sequence

Curve after fault G Branching ∦ SPS

RP Ejector pulse

VG

F

#### С Ejector pulse

- Vacuum on/off Vacuum generator
- D Non-return valve
- G Branching
- Vacuum switch А

## Start signal

- 1 External controller F activates the pressure sensor → Pressure sensor A checks the vacuum status

  - ➔ No vacuum present

## Vacuum on

- 2 Pressure sensor activates the VG solenoid B
  - → Valve for compressed air supply is opened
  - → Vacuum generation E is activated
- 3 Vacuum level 150 mbar below the maximum level is exceeded
  - → Pressure sensor sends an enable signal to external controller (PLC) F BK
  - → Transport process can start

#### Vacuum stop

- [4] The specified maximum level is achieved
  - → Pressure sensor A switches the VG solenoid off
  - → Compressed air supply stopped
  - → Vacuum generation E interrupted
  - → Non-return valve D prevents the vacuum level from being purged

#### Vacuum on

- 5 Leakage causes the vacuum level to drop to the minimum value
  - → Pressure sensor A switches the VG solenoid on again
  - → Vacuum generation E is active again

### Fault: Transport stopped

- 6 Major leakage causes an overly large drop in the vacuum level → Vacuum generator E cannot compensate for the drop in level
- 7 Vacuum level is 150 mbar below the minimum value
  - → Pressure sensor A sends an error message to the external controller (PLC) F BK
    - → External controller interrupts the transport process
    - → Vacuum generation E is ended

### Cycle ended: Vacuum off

- 8 Transport process ended
  - → External controller (PLC) F deactivates VG solenoid
  - → Vacuum generation E is ended
  - → External controller F switches on ejector RP solenoid C WH
  - → Ejector pulse activated
  - ➔ Workpiece is released

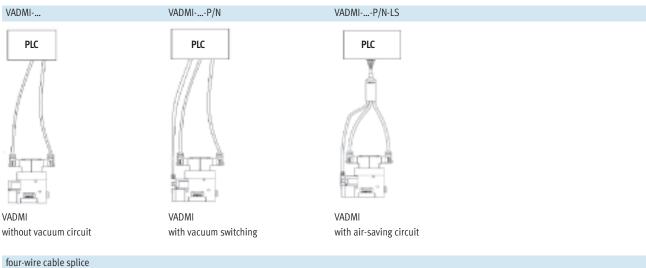

Technical data

#### **Connection to PLC**

## PNP and NPN switching of the VADMI-...-LS-P/N

The three control and supply cable harnesses are combined in a branching directly via the vacuum generator so that only one cable containing one signal wire and three voltage supply wires need to be conducted from the branching to the PLC.

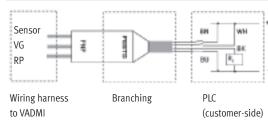

In principle there are two different signal characteristics with external control units (PLC) for the vacuum generator VADMI-LS, which differ only slightly in their mode of operation. As both versions are identical in terms of the vacuum generator and the vacuum switch, the signal flow is only converted in the branching, as this is the only difference between the models. The labelled plug-in connectors for the wiring harness are connected to the relevant elements of the VADMI-LS. The four-wire cable splice of the branching is connected to the control unit in the manner depicted below.

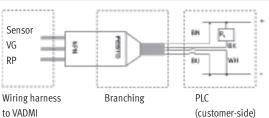

## PNP circuit

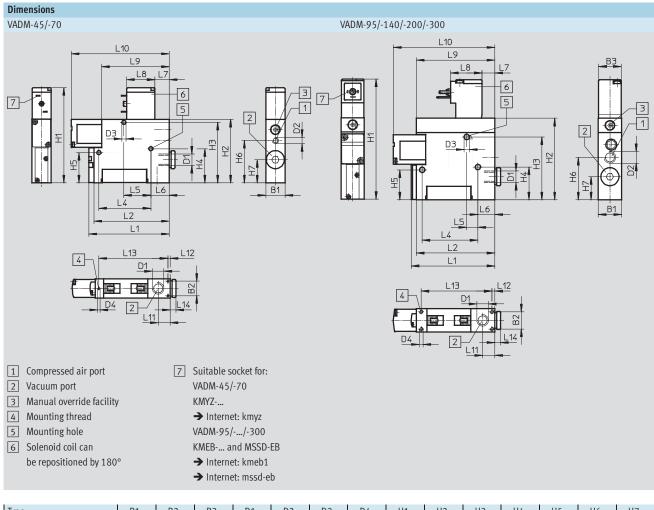

BN = Brown for vacuum generation VG

- WH = White for ejector pulse RP
- BK = Black for consumer  $R_L$  (PLC)
- BU = Blue for ground

## NPN circuit

### Note

With vacuum generators VADMI-...-LS-P/N, the plug sockets with cable for solenoid coils and vacuum switches are included in the scope of supply. These vacuum generators may only be operated with the cable supplied.

## Product Range and Company Overview

### **A Complete Suite of Automation Services**

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

**Custom Automation Components** Complete custom engineered solutions

**Custom Control Cabinets** Comprehensive engineering support and on-site services

**Complete Systems** Shipment, stocking and storage services

### **The Broadest Range of Automation Components**

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical Electromechanical actuators, motors, controllers & drives

**Pneumatics** Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices PLC's, operator interfaces, sensors and I/O devices

#### Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

### Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.
