- 1) Only applies to applications with end-position controller CPX-CMPX, SPC11 and axis controller CPX-CMAX, SPC200
- 2) The proportional directional control valve VPWP, MPYE requires these characteristic values
- 3) Note operating range of proximity sensors
- 4) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: www.festo.com → Support → User documentation.
If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.
- 5) Corrosion resistance class 1 according to Festo standard 940 070
Components subject to low corrosion stress. Transport and storage protection. Parts that do not have primarily decorative surface requirements, e.g. in internal areas that are not visible or behind covers.

Technical data

Torques and lateral forces

The piston rod must not absorb any torque. We therefore recommend using an external guide unit FENG-KF with the drive DNCI. The guide unit is supplied attached.

The permissible static and dynamic characteristic load values with and without attached guide as well as with regard to the technical data of the variants (S2, S8, S9)

→ Internet: dnc

Mounting conditions

The following conditions must be observed, when mounting a drive A with magnet (for position sensing) next to a standard cylinder DNCI:

- X Minimum distance between the drives
- Y Offset between the drives on the bearing cap

Parallel assembly

The drives can be assembled directly next to one another if the offset $Y = 0$ mm.

Off-set assembly, cable outlet between the drives

A distance of $X > 70$ mm must be observed, if the offset is $Y > 0$ mm and the cable outlet is between the drives.

Off-set assembly, cable outlet upwards or downwards

A distance of $X > 60$ mm must be observed, if the offset is $Y > 0$ mm and the cable outlet is up or down.

Measured-value transducer

DADE-MVC-010

DADE-MVC-420

(Order code MU, MI)

The measured-value transducer converts sensor signals from the standard cylinder DNCl into a voltage signal of 0 ... 10 V or a current signal of 4 ... 20 mA. These signals can be evaluated by a PLC with an appropriate signal input.
