

Spindle axes EGC-HD-BS, with heavy-duty guide

Electromechanical drives

Selection aid

Overview of toothed belt and spindle axes

Toothed belt axes

- Speeds of up to 10 m/s
- Acceleration of up to 50 m/s²
- Repetition accuracy of up to ±0.08 mm
- Strokes of up to 8,500 mm (longer strokes on request)
- Flexible motor mounting

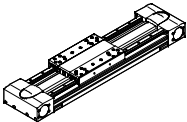

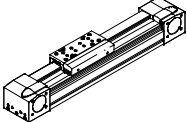

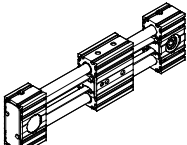

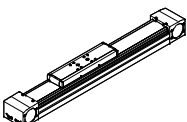

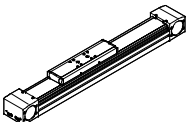

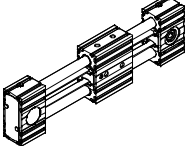

Spindle axes

- Speeds of up to 2 m/s
- Acceleration of up to 20 m/s²
- Repetition accuracy of up to ±0.003 mm
- Strokes of up to 3,000 mm

Coordinate system

Spindle axes EGC-HD-BS, with heavy-duty guide

Key features

At a glance

- New heavy-duty guide for:
 - Maximum loads and torques
 - High feed forces and speeds
 - Long service life
- Precision, resilient DUO guide rail
- Ideal as a basic axis for linear gantries and cantilever axes
- The spindle axis with integrated ball screw combines high precision and flexible spindle pitches
- In addition to its technical data, the spindle axis also offers an excellent price/performance ratio
- Space-saving position sensing with proximity sensor in the profile slot
- Wide range of options for mounting on drives
- Spindle support enables maximum travel speed with all stroke lengths

Flat unit with rigid, closed profile

EGC-HD-125

		Contains PWIS (paint-wetting impairment substances)

Spindle axes EGC-HD-BS, with heavy-duty guide

Technical data

Characteristic load values

The indicated forces and torques refer to the slide surface. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect. These values must not be exceeded during dynamic operation. Special attention must be paid to the cushioning phase.

If the axis is subjected to more than two of the indicated forces and torques at the same time, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y,dyn}|}{F_{y,max}} + \frac{|F_{z,dyn}|}{F_{z,max}} + \frac{|M_{x,dyn}|}{M_{x,max}} + \frac{|M_{y,dyn}|}{M_{y,max}} + \frac{|M_{z,dyn}|}{M_{z,max}} \leq 1$$

Permissible forces and torques				
Size		125	160	220
F _{y,max.}	[N]	3,650	5,600	13,000
F _{z,max.}	[N]	3,650	5,600	13,000
M _{x,max.}	[Nm]	140	300	900

Spindle axes EGC-HD-BS, with heavy-duty guide

Technical data

FESTO

Calculating the service life

The service life of the guide depends on the load. To provide a rough indication of the service life of the guide, the

graph below plots the load comparison factor f_c against the service life.

These values are only theoretical. You must consult your local contact person at Festo for load comparison factors f_c greater than 1.5.

Load comparison factor f_c as a function of service life

Example:

A user wants to move a load of X kg. Calculation with the formula $\rightarrow 12$ produces a value of 1.5 for the load comparison factor f_c . According to the graph, the guide has a service life of

approx. 1,500 km. Reducing the acceleration reduces the M_z and M_y values. A load comparison factor f_c of 1 now gives a service life of 5,000 km.

 Note

PositioningDrives
sizing software
www.festo.com

The sizing software can be used to calculate a guide workload for a service life of 5,000 km.

$f_c > 1.5$ are only theoretical comparison values for the recirculating ball bearing guide.

Spindle axes EGC-HD-BS, with heavy-duty guide

Technical data

Stroke reserve

Stroke length	Stroke reserve
---------------	----------------

The selected stroke corresponds in principle to the required working stroke. The variant GK does not have a long-term lubrication unit on the guide. These variants therefore additionally have a safety distance between the drive cap and slide that is not designated as part of the working stroke.

A safety distance (similar to GK) between the drive cap and slide can be defined for the variants GP using the modular product system via the stroke reserve feature. With the variants GK, the stroke reserve and safety distance are added for each end position.

- The stroke reserve length can be freely selected
- The sum of the stroke length and 2x stroke reserve must not exceed the maximum working stroke

Example:

Type: EGC-HD-125-500-BS-20H-...
 Working stroke = 500 mm
 2x stroke reserve = 40 mm
 Total stroke = 540 mm
 (540 mm = 500 mm + 2x 20 mm)

Size	125	160	220
L = safety distance with GK [mm] (per end position)	12.5	15.5	20

Working stroke reduction

With standard slide GK/GP with additional slide KL/KR

- With a spindle axis with additional slide, the working stroke is reduced by the length of the additional slide L17 and the distance between both slides L18
- If the variant GP is ordered, the additional slide is also protected

L16 = Length of slide
 L17 = Length of additional slide
 L18 = Distance between both slides

Example:

Type: EGC-HD-220-1000-BS-...-GP-KR
 L18 = 100 mm

Working stroke = 1,000 mm – 328 mm – 100 mm = 572 mm

Dimensions – Additional slide

Size	125	160	220
Variant	GK	GK	GP
Length L17 [mm]	202	220	250

Working stroke reduction per side

With integrated emergency buffer NPE with retainer EAYH-L2

- With a spindle axis, the working stroke is reduced by the total dimension of the emergency buffer and retainer.

Size	125	160	220
With emergency buffer [mm]	65	93	98

Maximum permissible support spacing L (without profile mounting) as a function of force F

In order to limit deflection in the case of large strokes, the axis may need to be supported.

The following graphs help to determine the maximum permissible support spacing L as a function of force F acting on the axis. The deflection is $f = 0.5$ mm.

Force Fy

Force Fz

- EGC-HD-125-BS
- - - EGC-HD-160-BS
- EGC-HD-220-BS

Recommended deflection limits

Adherence to the following deflection limits is recommended so as not to impair the functional performance of

the axes. Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dyn. deflection (moving load)	Stat. deflection (stationary load)
125 ... 220	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

2) The output torque at the gear unit output must be less than the transferable torque of the kit.

 Note

1) These parallel kits include a counter bearing EAMG to support the axis shaft.
More information → eamm-u

 Note

The clamping component EADT is required to adjust the toothed belt pretension with EAMM-U-110 and EAMM-U-145.

The motor and/or axis shaft can optionally be supported with a counter bearing EAMG.
More information → eamm-u
