

Position transmitters SMAT-8M, for T-slot

# Position transmitters SMAT-8M, for T-slot

Key features

## Design

### General

The SMAT-8M is a position transmitter for the contactless sensing of the piston position of drives that can be detected magnetically. It supplies a displacement-proportional analogue

output signal in the position measuring range. It is connected directly to the analogue PLC inputs without any accessories. With its extremely compact design,

the SMAT-8M is the ideal solution for grippers, short-stroke cylinders and all applications in which installation space is restricted.

Note

It can be used with Festo cylinders with T-slot (profile slot 8) as well as round cylinders and tie-rod cylinders with mounting kits. A selection aid with suitable drives can be found on the following pages.

### Position measuring range

The SMAT-8M supplies a displacement-proportional analogue output signal of 0 ... 10 V in the position measuring range of up to 40 mm (depending on the drive used). In other words, the output voltage increases when the piston moves in the direction of the piston rod. When the piston retracts, the output voltage drops. The installation direction of the SMAT-8M is irrelevant in this case. To achieve the best possible function on the drive in question, the position measuring range must be initialised on the drive during installation.

As a visual aid, the green LED lights up within the position measuring range (B) and the red LED lights up outside the measuring range (A)/(C) in normal operation.

### Repetition accuracy

The repetition accuracy is  $\pm 0.025$  mm on grippers and  $\pm 0.1$  mm on standard drives.

With standard drives, the repetition accuracy in the centre of the measuring range is lower than at the edge. It is  $\pm 0.06$  mm at a distance of  $\pm 5$  mm from the centre, for example. For critical applications, it is recommended that the SMAT-8M be mounted so as to have the relevant measuring points close to 5.5 V.

Repetition accuracy as a function of position measuring range S

Technical data

Function

Normal operation

General technical data	
Design	For T-slot
Certification	c UL us - Listed (OL)
	C-tick
CE marking (see declaration of conformity)	To EU EMC Directive <sup>1)</sup>
Note on materials	RoHS-compliant
	Cable, halogen-free
	Cable, oil resistant

- 1) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: [www.festo.com](http://www.festo.com) → Support → User documentation.  
If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.

Input signal/measuring element	
Measuring principle	Magnetic
Position measuring range [mm]	≤ 40 <sup>2)</sup>

- 2) Depending on drive/gripper used.

Signal processing	
Max. speed of travel [m/s]	3

Output, general	
Displacement resolution [mm]	≤ 0.05 <sup>2)</sup>
Repetition accuracy [mm]	±0.1 on cylinders <sup>3)</sup>
	±0.025 on grippers <sup>3)</sup>

- 2) Depending on drive/gripper used.  
3) Use of a non-rotating piston rod or a mechanical structure to protect against rotation is recommended.

Analogue output	
Typical linearity error [mm]	±1 on cylinders <sup>2)</sup>
	±0.2 on grippers <sup>2)</sup>

- 2) Depending on drive/gripper used.

Electrical outputs	
Analogue output [V]	0 ... 10
Protection against short circuit	Yes
Protection against overloading	Yes
Output signal	Analogue
