FESTO

Key features

Application

Controller

The CoDeSys controllers are modern control systems for CPX terminals that enable programming with CoDeSys to IEC 61131-3.

Programming in a global language

CoDeSys provided by Festo offers a convenient user interface with the following functions:

- Integrated module libraries
- Library administrator for integrating additional libraries
- · Visualisation editor
- · Simulation mode
- Integrated project documentation
- Debugging functions for fault finding
- Configuration and parameterisation of the controller using the control configuration

Basic functions

The CoDeSys controllers offer the following basic functions:

- Programming with CoDeSys to IEC 61131-3
- · Communication via Ethernet (Modbus/TCP, EasyIP, TCP/IP)
- Process visualisation using operator unit FED or OPC server
- Communication via fieldbus in combination with a fieldbus node in the CPX terminal
- Diagnostics and quick commissioning of CPX modules via handheld CPX-MMI

CPX-CEC-C1 offers

- All basic functions
- CANopen master for controlling 31 CANopen stations. Electric axes can be controlled in point-to-point mode

CPX-CEC-M1 offers

- All basic functions
- CANopen master for controlling up to eight electric axes (recommended) in interpolated mode (two of these axes with circular interpolation and six additionally with linear interpolation)
- · SoftMotion function library for coordinated multi-axis movements

CPX-CEC offers

- All basic functions
- RS232 interface for operating external devices

The SoftMotion functions are not available when the control block is operated as a CANopen master.

Note

When using external devices, data communication must be programmed by the user.

Bus connection

The CoDeSys controllers are remote controllers that can be connected to a higher-order PLC via the fieldbus nodes of the CPX terminal or via Ethernet, for example:

- PROFINET
- EtherNet/IP
- EtherCAT
- PROFIBUS DeviceNet

Operating modes

- Stand-alone
- Remote controller on the fieldbus
- Remote controller on the Ethernet

System expansion

CANopen connects CPX-CEC with valve terminals and electric drive controllers from Festo:

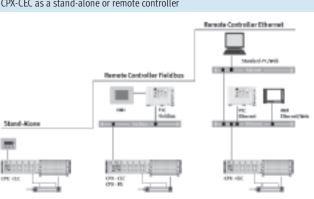

- CPX, CPV
- CMMP-AS, CMMS-AS/-ST, etc.
- · AS-interface gateway, wireless gateway

Ethernet connects CPX-CEC with additional controllers and operator units from Festo:

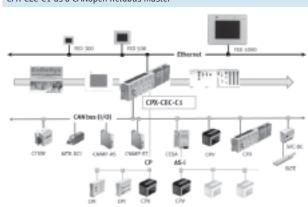

- CECX
- FED-50 to FED-5000
- FED-CEC
- Camera SBOx-Q

System expansion (examples)

CPX-CEC as a stand-alone or remote controller

CPX-CEC-C1 as a CANopen fieldbus master

Key features

Advantages for users

Increased performance

Improved cycle times – more connectable actuators.
Compatibility with almost all control systems on the market is ensured via the CPX terminal.

The extensive CoDeSys function library provides diagnostics and condition monitoring options.

Reduced costs

For standardised pre-processing: reduces installation costs as an intelligent remote I/O terminal to IP65/IP67 directly at the machine. CPX-CEC is ideally adapted to CPX and

motion applications with up to 31 axes. We recommend operating the CPX-CEC-M1 with a maximum of eight axes.

Simple, yet efficient: decentralised structures

The modular I/O system with up to 512 I/Os and CAN master functionality (CPX-CEC) offers complete flexibility, whether for open-loop or closed-loop control.

Stand-alone for low-cost automation of manual workstations, for example, or remote control with pre-processing.

The only one in the world to IP65

The fully integrated automation platform for standard, proportional and servopneumatics, sensors and motion control to IP65.

Included: simple commissioning.

Classification of CPX-CEC in the portfolio for multi-axis controllers for electric drive technology

Embedded controller

The controller FED-CEC (CoDeSys) for insertion in the display and operator units from Festo facilitates compact solutions for small control tasks in combination with electric drive technology.

CPX-CEC (CoDeSys) permits the flexible connection of valve actuators and electric drives on the terminal – programmable in CoDeSys and can, if necessary, be directly installed at the machine to IP65. The ideal complement to the gateway module CPX-CM-HPP and the multi-axis interface CPX-CMXX.

Modular controller

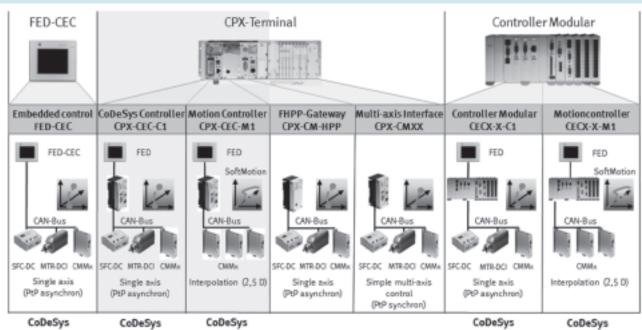

The modular controllers complete the upper end of the range for actuating electric drives.

The CECX-X-C1 (CoDeSys) is the ideal expansion option for a control cabinet in combination with electric drive technology and general control technology.

The CECX-X-M1 (CoDeSys) executes advanced tasks such as cam disks, multi-axis function modules to PLCopen and simple NC functions up to 2.5D.

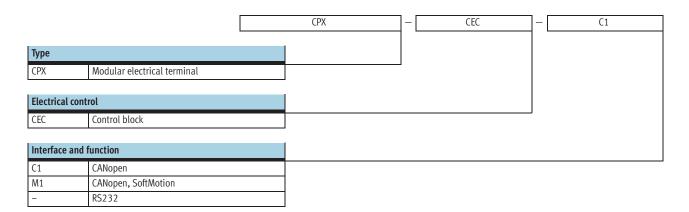

The robot controller CMXR provides interpolating control for different kinematic systems (e.g. Tripod kinematics) with up to six axes.

CPX-CEC in the electric drive world

FESTO

Type codes

Powerful control block for preprocessing actuation of the CPX modules.

The power supply to and communication with other modules takes place via the interlinking block. In addition to the connection for the Ethernet interface in RJ45 and a programming interface in Sub-D, LEDs are also provided for the bus status, operating status of the PLC and CPX peripherals information, as are switching elements and a diagnostic interface for CPX-MMI.

Technical data

The CoDeSys controller is a modern control system for CPX terminals that enables programming with CoDeSys to IEC 61131-3.

- Easy actuation of valve terminal configurations with MPA, VTSA
- Connection to all fieldbuses as a remote controller and for preprocessing
- Actuation of electric drives as individual axes via CANopen (CPX-CEC-C1/-M1)
- Diagnostics with flexible monitoring options for pressure, flow rate, cylinder operating time, air consumption
- Early warnings and visualisation options
- Actuation of decentralised installation systems on the basis of CPI actuation of applications in proportional pneumatics
- Servopneumatic applications
- AS-interface actuation via gateway

Product Range and Company Overview

A Complete Suite of Automation Services

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components Complete custom engineered solutions

Custom Control Cabinets Comprehensive engineering support and on-site services

Complete Systems Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical Electromechanical actuators, motors, controllers & drives

Pneumatics Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
