# Parallel grippers HGPC

# **FESTO**

# Parallel grippers HGPC

Key features

### **FESTO**

### At a glance

General

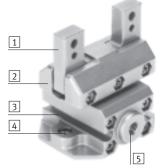

The compact and low-cost parallel gripper consists of a two-part symmetrical housing. The piston moves traverse to the half-shell casing in an optimum housing design that

guarantees reliable operation, long service life and convenient sensing. The gripper jaws move along the half shells in backlash-free, preloaded ball bearing guides.

- Double-acting gripper
- Compression spring for supplementary or retaining gripping forces
- Internal fixed flow control, does away with the need for external flow control in 80% of applications
- High force with minimal volume
- Suitable for external and internal gripping
- Wide range of options for attaching drive units
- Repetition accuracy of 0.05 mm
- Slot for proximity sensor SME/SMT-10

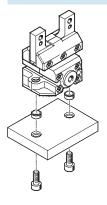

### Details

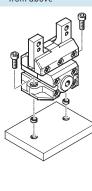

- Gripper jaw with ball bearing
  guide
- 2 Housing based on half-shell principle
- 3 Slot for proximity sensor, for sensing the piston position
- 4 Mounting option
- 5 Supply port

HGPCG2	154	244	477			

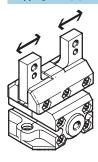

### Materials Sectional view

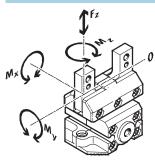

Para	Parallel gripper					
1	Gripper jaw	High-alloy steel				
2	Housing	Die-cast zinc				
3	Piston	Polyamide				
-	Seals	Polyurethane, nitrile rubber				
-	Note on materials	Copper, PTFE and silicone-free				
		Conforms to RoHS				

### Gripping force [N] at 6 bar

Size	12	16	20
Gripping force per gripper jaw			
Opening	22	41.5	63
Closing	22	41.5	63
Total gripping force			
Opening	44	83	126
Closing	44	83	126

### Static characteristic load values at the gripper jaws

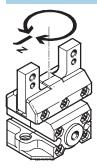

Indicated permissible forces and torques apply to a single gripper jaw. The indicated values include the lever arm, additional applied loads caused by the workpiece or external gripper fingers, as well as forces which occur

during movement. The zero coordinate line (gripper finger guide) must be taken into consideration for the calculation of torques.

Size		12	16	20
Max. permissible force F <sub>z</sub>	[N]	40	80	120
Max. permissible torque M <sub>x</sub>	[Nm]	1	2,5	5
Max. permissible torque M <sub>y</sub>	[Nm]	1	2,5	5
Max. permissible torque M <sub>z</sub>	[Nm]	1	2,5	5

### Mass moment of inertia [kgm²x10-4]

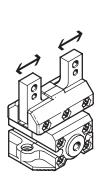

Mass moment of inertia  $[kgm^2x10^{-4}]$ of the parallel gripper in relation to the central axis with no load.

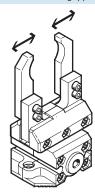

Size	12	16	20
HGPCA	0.272	0.679	2.095
HGPCG2	0.274	0.683	2.105

### Opening and closing times [ms] at 6 bar

without external gripper fingers

with external gripper fingers

The indicated opening and closing times [ms] have been measured at room temperature and at 6 bar operating pressure with horizontally mounted gripper without additional

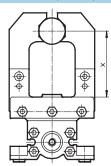

gripper fingers. The grippers must be throttled for greater applied loads. Opening and closing times must then be adjusted correspondingly.

Size		12	16	20
without external gripper fing	gers			
HGPCA	Opening	30	60	90
	Closing	30	60	90
HGPCG2	Opening	30	70	105

**FESTO** 

### Gripping force $F_{\text{Grip}}$ per gripper jaw as a function of operating pressure and lever arm $\boldsymbol{x}$

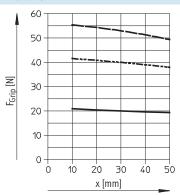

Gripping forces as a function of the operating pressure and the lever arm can be determined for the size using the following graph.

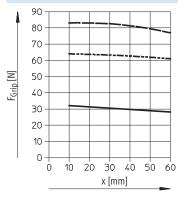

# HGPC-12-A 30

### HGPC-16-A

### HGPC-20-A

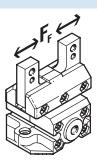

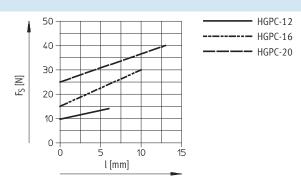

**FESTO** 

### Spring force $\boldsymbol{F}_{\boldsymbol{S}}$ as a function of the gripper size and the overall stroke $\boldsymbol{l}$

Gripping force retention for HGPC-...-G2

Spring forces  $F_S$  as a function of the gripper size and the overall stroke l for various gripper types (HGPC-...-G2) can be determined using the following graphs.

The lever arm x must be taken into consideration when determining the actual spring force F<sub>Stotal</sub>. The formulae for calculating the spring force are provided in the table opposite.

Size	F <sub>Stotal</sub> =
12	-0.02 * x +0.5 * F <sub>S</sub>
16	-0.05 * x +0.5 * F <sub>S</sub>
20	-0.05 * x +0.5 * F <sub>S</sub>

### Determination of the actual gripping forces $F_{Gr}$ for HGPC-...-G2 depending on the application

Parallel grippers with integrated spring type HGPC-...-G2 (closing gripping force retention) can be used as:

- single-acting grippers

- grippers with supplementary gripping force
- grippers with gripping force retention

In order to calculate available gripping forces F<sub>Gr</sub> (per gripper jaw), the gripping force (F<sub>Grip</sub>) and spring

force (F<sub>Stotal</sub>) must be combined accordingly.

### **Application**

Single-acting

- Gripping with spring force:  $F_{Gr} = F_{Stotal}$
- Gripping with pressure force:  $F_{Gr} = F_{Grip} - F_{Stotal}$

Supplementary gripping force

• Gripping with pressure and spring

$$F_{\mathsf{Gr}} = F_{\mathsf{Grip}} + F_{\mathsf{Stotal}}$$

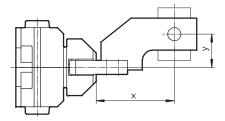

Gripping force retention

• Gripping with spring force:

 $F_{Gr} = F_{Stotal}$ 

### **FESTO**

## Gripping force $F_{Grip}$ per gripper jaw at 6 bar as a function of lever arm $\boldsymbol{x}$ and eccentricity $\boldsymbol{y}$

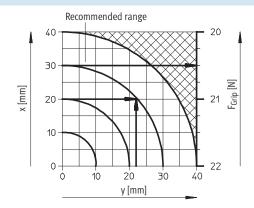

Gripping forces at 6 bar dependent upon eccentric application of force and the maximum permissible off-centre point of force application can be determined for the size using the following graph.

### Calculation example

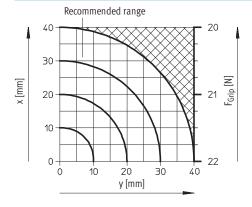

Lever arm x = 20 mmEccentricity y = 22 mm To be found: Gripping force at 6 bar

### Procedure:

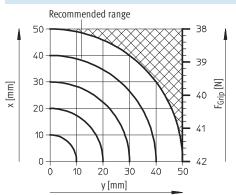

- Determine the intersection xy between lever arm x and eccentricity y in the graph for HGPC-12-A-...
- Draw an arc (with centre at origin) through intersection xy.
- Determine the intersection between the arc and the X axis.
- Read the gripping force. Result: Gripping force F = approx. 20.5 N

## **Product Range and Company Overview**

### **A Complete Suite of Automation Services**

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

**Custom Automation Components** Complete custom engineered solutions

**Custom Control Cabinets** Comprehensive engineering support and on-site services

**Complete Systems** Shipment, stocking and storage services

### The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical Electromechanical actuators, motors, controllers & drives

**Pneumatics** Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices PLC's, operator interfaces, sensors and I/O devices

#### Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

### Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
