Technical data

FESTO

8 ... 60 mm

General technical data								
Size		8	12	16	20	25	32	
Stroke	[mm]	8	12	20	25	40	60	
Mode of operation		Hydraulic shock	absorber with sprin	g return	•			
		Single acting, pushing						
Cushioning		Adjustable, force-dependent, hard characteristic curve						
Cushioning length	[mm]	8	12	20	25	40	60	
Type of mounting		Via lock nut					•	
Impact velocity	[m/s]	0.1 3						
Mounting position		Any						
Product weight	[g]	60	105/120 ¹⁾	200/250 ¹⁾	355/425 ¹⁾	715	1,355	
Ambient temperature	perature [°C] -10 +80							
Corrosion resistance class CRC ²⁾ 1								

- 1) Applies to shock absorbers with special thread T
- Cornsion resistance class 1 according to Festo standard 940 070
 Components subject to low corrosion stress. Transport and storage protection. Parts that do not have primarily decorative surface requirements, e.g. in internal areas that are not visible or behind covers

Reset time [s]						
Size	8	12	16	20	25	32
Reset time ¹⁾	≤ 0.2		≤ 0.3		≤ 0.4	≤ 0.6

1) The specified technical data refers to ambient temperature. At -10 °C, the reset time can be up to 1 s for sizes 12, 16 and up to 3 s for sizes 8, 20, 25, 32

Force [N]								
Size	8	12	16	20	25	32		
Min. insertion force ¹⁾	18	38	66	110	155	175		
Max. stop force ²⁾ in the end positions	400	900	1,600	2,500	4,000	6,400		
Min. resetting force ³⁾	1.8	4.5	5.4	9	12.5	18		

- 1) This is the minimum force that must be applied so that the shock absorber is pushed precisely into the retracted end position. This value is reduced correspondingly with an extended external end position
- 2) If the maximum stop force is exceeded, a fixed stop (e.g. YSRA) must be fitted 0.5 mm before the end of stroke
- 3) This is the maximum force that can act on the piston rod, allowing for full extension of the shock absorber (e.g. protruding bolt)

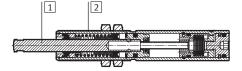

Energy [J]								
Size	8	12	16	20	25	32		
Max. energy absorption per stroke	4	10.8	32	62.5	160	384		
Max. energy absorption per hour	24,000	60,000	100,000	135,000	220,000	330,000		
Max. residual energy	0.01	0.05	0.16	0.32	0.8	2

Ambient temperature	[°C]	-10 +80	0	•	•				•		•
Corrosion resistance class	CRC ¹⁾	2									

1) Corrosion resistance class 2 to Festo standard 940 070
Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents

Reset time [s]										
Size	4	5	7	8	10	12	16	20	25	32
Reset time ¹⁾	≤ 0.2						≤ 0.3		≤ 0.4	≤ 0.5

1) The specified technical data refers to ambient temperature. At higher temperatures in the 80 °C range, the max. mass and the cushioning work must be reduced by 50% approx. At -10 °C, the reset time may be up to 1 second

Forces [N]										
Size	4	5	7	8	10	12	16	20	25	32
Min. insertion force ¹⁾	6.5	7.5	10	18	25	35	60	100	140	160
Max. stop force ²⁾ in end positions	100	200	300	500	700	1,000	2,000	3,000	4,000	6,000
Min. resetting force ³⁾	0.7	0.9	1.2	2.5	3.5	5	6	10	14	20

- 1) This is the minimum force that must be applied so that the shock absorber is pushed exactly into the retracted end position. This value is reduced correspondingly in the event of an extended external end-position
- 2) If the max. stop force is exceeded, a fixed stop (e.g. YSRA) 0.5 mm must be fitted before the end of stroke
- 3) This is the maximum force which may act upon the piston rod, allowing for full extension of the shock absorber (e.g. protruding stem)

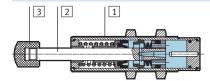

Energies [J]										
Size	4	5	7	8	10	12	16	20	25	32
Max. energy absorption per stroke	0.6	1	2	3	6	10	30	60	160	380

Type codes YSRWJ Type YSRWJ Shock absorber Size Stroke [mm] Position sensing Position sensing

Stop elements YSRWJ Technical data

FESTO

7.5 ... 13.5 mm

General technical data				
Size		5	7	8
Stroke	[mm]	8	10	14
Mode of operation		A piston rod in front of the shock absorb	er transmits the force to the shock absorb	er. This serves as the end stop and
		actuates the proximity sensor via a mag	net mounted on it	
		Single acting, pushing		
Cushioning		Self-adjustable		
Cushioning length	[mm]	8	10	14
Type of mounting		With locknut		
Position sensing Via proximity sensor				
Impact velocity	[m/s]	0.05 2	0.05 3	
Repetition accuracy	[mm]	0.02		
Mounting position		Any		
Product weight	[g]	45	75	110
Ambient temperature	nbient temperature [°C] 0 +60			
Corrosion resistance class CRC ¹⁾		2		

1) Corrosion resistance class 2 to Festo standard 940 070 Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents

Reset time [s]			
Size	5	7	8
Reset time ¹⁾	≤ 0.2		

1) The specified technical data refers to ambient temperature. At higher temperatures in the 80 °C range, the max. mass and the cushioning work must be reduced by 50% approx. At 0 $^{\rm o}\text{C}\text{,}$ the reset time may be up to 1 second

Forces [N]			
Size	5	7	8
Min. insertion force ¹⁾	5	18	80
Max. stop force ²⁾ in end positions	200	300	500
Min. resetting force ³⁾	1.5	2	3.5

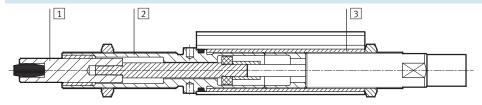

- 1) This is the minimum force that must be applied so that the shock absorber is pushed exactly into the retracted end position
- 2) Impact force may not exceed the maximum specified value
- 3) This is maximum force that can be exerted on the piston rod so that the shock absorber advances fully

Energies [J]			
Size	5	7	8
Max. energy absorption per stroke	1	2	3
Max. energy absorption per hour	10,000	15,000	21,000
Max. residual energy	0.01		0.02

Mass range [kg]			
Size	5	7	8
Permissible mass range up to	2	5	10

Materials

Sectional view

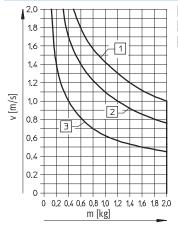

Stop 6	Stop element		
1	Stop bolt	Steel, stainless and reinforced	
2	Distance sleeve	Galvanised steel	
3	Threaded barrel	Brass, nickel-plated	
-	Note on materials	Free of copper, PTFE and silicone	
		Conforms to RoHS	

Selection graphs for limit stops with shock absorber YSRWJ

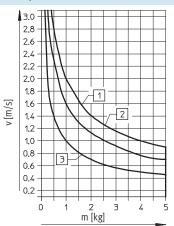

Impact velocity dependent on mass m

YSRWJ-5-8-A

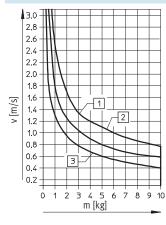

- Without additional force
- With additional force A = 50 N
- $\boxed{3}$ With additional force A = 100 N

YSRWJ-7-10-A

- 1 Without additional force
- 2 With additional force A = 75 N
- 3 With additional force A = 150 N

YSRWJ-8-14-A

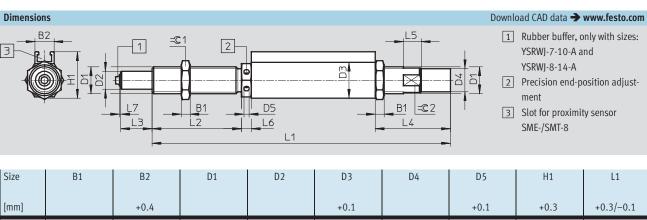

- Without additional force
- 2 With additional force A = 100 N
- With additional force A = 150 N

Mode of operation

- Soft cushioning characteristics cushioning stroke is adjustable
- 2 End-position sensing via proximity sensor SME-/SMT-8 that can be integrated
- 3 Precision end-position adjustment
- Precision end position thanks to internal, metallic inserts

Calculation tool for cushioning components

Technical data

ceed as follows:

tion.

This selection aid helps you find the 1. Determine the following values, right shock absorber for every applicaeffective at the time of impact:

- Force (A)
- Equivalent mass m_{equiv}
- Impact velocity (v)

3. Check your selection on the basis of its maximum cushioning energy (W_{max.})

Note

Sizing software Shock absorber selection

FESTO

→www.festo.com

When you are choosing a shock absorber for your application, ensure that the following values are not exceeded:

When you are choosing a shock ab-

sorber, we recommend that you pro-

Permissible energy load per

W_{min}. = 25%

Recommended energy load per

 $W_{max.}$ = 100%

= 50% ... 100 % Wopt.

In order to prevent damage to the

Guide values for linear motions:

factor 1.5 with strokes > 50 mm and

factor 1.25 with strokes > 100 mm.

Factor 2 with strokes < 50 mm.

the following values:

 $\omega = 1.25 ... 2 \omega_{m}$

(100 mm

= 1.25 ... 2 v_m

drive concerned, calculations should

in the interests of safety be based on

stroke:

Max. residual energy Max. stop force in end position

The fact that the (angular) velocity ap-

pears in the calculation as a squared

value means that the expected error

becomes considerably larger. The cal-

culation can thus be regarded only as

an approximation. The safety factor

does, however, ensure that the selec-

ted shock absorber is not too small.

Max. energy absorption per hour

The (angular) velocity required in the formulae is the velocity at the time of the impact on the shock absorber. This depends on the dynamic characteristics of the drive component and is thus difficult to determine.

It is better to determine the mean velocity ($v_m = s/t$ or $\omega_m = \varphi/t$).

The following formulae are required

 $A = F + m \times g \times \sin \alpha$

 $W_h = W_{total} \times Stroke \div Hours < W_{hmax}$

for the calculation:

A = F + G

 $W_{total} = \frac{1}{2} \times m \times v^2 + A \times s < W_{max.}$

The following applies additionally for

rotary motions:

 $m_{\text{equiv.}} = \frac{J}{R^2}$

 $A = \frac{M}{R} + m \times g \times \sin \alpha \times \frac{a}{R}$

The following abbreviations are used:

A = Additional force = F + G [N]

= Cylinder force minus frictional force [N]

= Force due to weight

= m x g x sin α

Special cases:

 α = 0°: Horizontal motion

G = 0

= 90°: Downward motion

 $G = m \times g$

= 90°: Upward motion:

 $G = -m \times g$

v = Impact velocity [m/s]

m_{equiv.}= Equivalent mass [kg]

= Acceleration due to gravity $9.81 \, [m/s^2]$

= Shock absorber stroke [m]

 α = Impact angle [°]

W_{total}= Cushioning work/stroke [J]

W_h = Cushioning work/hour [J]

= Mass moment of inertia $[kg \times m^2]$

= Distance between mass pivot point and shock absorber [m]

= Angular velocity [rad/s]

= Drive torque [Nm]

= Distance between centre of gravity of mass and pivot point

Calculation tool for cushioning components

Technical data

Sizing example for linear motion

This example illustrates the procedure for the selection of a shock absorber for the application shown in the adjacent drawing:

A = F + m x g x sin α = 190 N + 50 x 9.81 x sin α N = 537 N

 $m_{equiv} = m = 50 \text{ kg}$

 $(\varnothing 20 \text{ mm with p} = 6 \text{ bar,}$

1,800 strokes per hour)

ment facilities and size.

= 50 kg

= 45°

= 190 N

= 1.5 m/s

In the process of selecting shock absorbers on the basis of the graphs (see data sheets), the force (A) is governed by the first curve to the right of the point of intersection of the equivalent mass (m_{equiv}) and the impact velocity (v). The curves move to the left as the additional force increases.

Three force curves are given for each shock absorber. Interim values must be calculated by averaging. As the

graphs show (continuous line), possible choices are the shock absorbers DYSR-25-40 and YSR-25-40-C. We must now determine whether the maximum permissible values for cushioning work (W_{max.}) and cushioning work per hour (W_{hmax.}) are not being exceeded. These maximum permissible values and the stroke length (s) can be found in the tables (below the graphs).

Experiment:

$$\begin{aligned} W_{total} &= \frac{1}{2} x \, m \, x \, v^2 + A \, x \, s \\ &= (1/2 \, x \, 50 \, x \, 1.5^2 \, + \\ &= 537 \, x \, 0.04) \, Nm = 78 \, J \end{aligned}$$

W_h = W_{total} x strokes/h = 78 Nm x 1,800 = 140,000 J For the above application, both shock absorbers are suitable.
Further selection criteria are adjust-

Result		
	DYSR-25-40	YSR-25-40-C
W _{total}	78 J	78 J
W _h	140,000 J	140,000 J
W _{max.} 1)	160 J > W _{total}	160 J > W _{total}
W _{hmax} .	220,000 > W _{max} .	150,000 > W _{max} .

¹⁾ The degree of utilisation is 49% in both cases.

Sizing example for rotary motion

Example for rotary motion:

$$m_{equiv} = J/R^2 = 8 \text{ kg}$$

$$v = \omega x R$$

$$A = M/R = 40 N$$

 $= 2 \text{ kg m}^2$

= 4 rad/s ω

= 0.5 m

= 20 Nm

900 strokes per hour

In the process of selecting shock absorbers on the basis of graphs (see data sheets), the force (A) is governed by the first curve to the right of the point of intersection of the equivalent mass (m_{equiv}) and the impact velocity (v). The curves move to the left as the additional force increases.

Three force curves are given for each shock absorber. Interim values must be calculated by averaging. As the graphs show (dotted line), possible choices are the shock absorbers DYSR-16-20 and YSR-16-20-C.

We must now determine whether the maximum permissible values for cushioning work (W_{max.}) and cushioning work per hour (W_{hmax.}) are not being exceeded. These maximum permissible values and the stroke length (s) can be found in the tables (below the graphs).

Note: The impact angle must be noted with rotary applications.

$$tan\,\alpha\,=\,\frac{s}{R}$$

s = Cushioning stroke

Experiment:

$$W_{total} = \frac{1}{2} \times m \times v^2 + A \times s$$
$$= (1/2 \times 8 \times 2^2 + 40 \times 0.02) J = 17 J$$

For the above application, both shock absorbers are suitable.

Further selection criteria are adjustment facilities and size.

Result		
	DYSR-16-20 ³⁾	YSR-16-20-C
W _{total}	17 J	17 J
W _h	15,300 J	15,300 J
W _{max} .	$32 \text{ J} > \text{W}_{\text{total}}^{1)}$	30 J > W _{total} ²⁾
W _{hmax} .	$100,000 > W_{\text{max.}}$	64,000 > W _{max} .

- The degree of utilisation is 53%.
- The degree of utilisation is 57%.
- Use without buffer.

Product Range and Company Overview

A Complete Suite of Automation Services

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components Complete custom engineered solutions

Custom Control Cabinets Comprehensive engineering support and on-site services

Complete Systems Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical Electromechanical actuators, motors, controllers & drives

Pneumatics Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
