Multi-axis controllers CMXR-C2

Key features

FESTO

At a glance

Benefits

The comfort of a multi-axis controller with the flexibility of a PLC on one platform: the multi-axis controller CMXR-C2 is the top performer class in

the CMXR series. The applications range from simple to complex handling of moving objects on several conveyor systems.

The multi-axis controller CMXR-C2 is especially suitable for tracking applications; vision sensors (e.g. camera, etc ...) can be connected for detecting parts.

In addition to motion control, the multi-axis controller CMXR-C2 also offers an integrated PLC to CoDeSys V2.3.

Powerful – reducing cycle times with optimum motion

Reducing cycle times is a requirement of all customers. There are limits, however, to what is possible based on, for example, the mechanical system, the travel distances or the maximum forces acting on a workpiece.

The challenge is to be quick and at the

same time protect the mechanical system. The multi-axis controller CMXR offers the following features:

- Motion path smoothing for positions
- Ramp shapes for acceleration
- Constant path speed

Economical – reducing costs with easy configuration

Reducing costs is always an important issue. The Festo Configuration Tool (FCT) in combination with the programming language Festo Teach Language (FTL) makes configuration quick and easy and significantly shortens configuration times. This enables the

full focus to be on developing the application, since the basic motion programs are contained in the CMXR. The FTL programming tool utilises these basic programs. The FTL programs can therefore be used immediately.

Reliable – easy handling of tools in 3D space

The flange is not the end of a kinematic system. Mounted on the flange are the tools, which can, for example, comprise pneumatic drives such as the semi-rotary drive DRQD. Tools oriented other than vertically are a challenge for a controller. The CMXR enables the end position of the tool, for example a vacuum suction cup, to be defined in 3D space and transfers

this point to the programmed path. This feature also makes it easy to move the three-dimensionally positioned tool in the direction of the tool's path simply by pressing a button on the teach pendant CDSA. The teach-in of positions on parts slides, for example, is thus very easy and efficient.

Reliable – easy integration with finished interfaces

The CMXR system offers fully defined interfaces for actuation via an external controller. This can be done with a simple method using digital signals or via a Profibus. These interfaces enable programs to be selected, started or stopped, for example. The Profibus variant also offers the option of reading or writing variables from the CMXR controller.

This transfer of variables enables movements to be influenced or even coupled with a process running on the external controller. To minimise the complexity when using an external PLC, modules for the PLC systems Siemens Simatic S7 and systems based on CoDeSys V2.3 are supplied for actuation via Profibus.

Flexible – from simple to complex kinematic systems

Cartesian system

Tripod kinematics

The multi-axis controller CMXR is the heart of a complete kinematic system solution. It combines a mechanical system, electrical drive technology and control technology into a complete motion control package with integrated and harmonised interfaces for all system components included.

The multi-axis controller enables simple axis movements, from point to point to complex path control. It is able to control simple and complex kinematic systems with up to six degrees of freedom in 3D space. These include, among others, linear and three-dimensional gantries (Cartesian systems) as well as tripod kinematic systems.

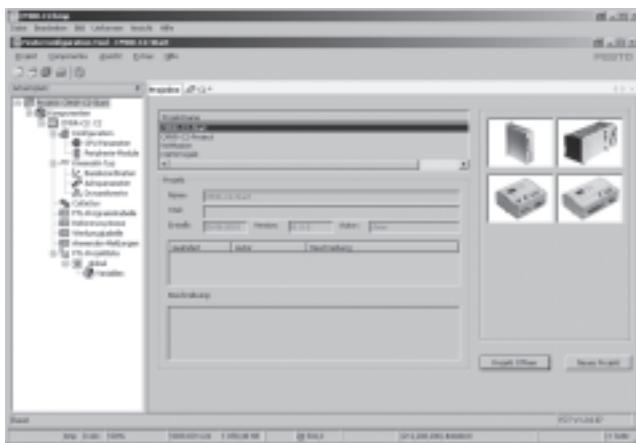

Multi-axis controllers CMXR-C2

FESTO

Key features

At a glance

Convenient – quick and easy configuration

The main requirements for product configuration software are speed, reliability and user-friendliness. The multi-axis controller CMXR, like other products from Festo, is configured via the Festo Configuration Tool (FCT). Electrical variables (e.g. inputs and

outputs) as well as mechanical variables (e.g. choice of the kinematic system) are defined in the configuration. The sophisticated user guidance system guarantees quick and easy configuration of the complex multi-axis system.

Transparent – programming in plain text with FTL

Via teach pendant CDSA

Via Festo Configuration Tool (FCT)

The motion programs are programmed using the text-based macro programming tool of the Festo Teach Language (FTL). This powerful programming tool contains macros, for example for movements, dynamic settings as well as I/O processing of peripheral

devices such as grippers, for example, and has been specially developed for the CMXR. Programming can be done online via the teach pendant CDSA or offline via the FTL programming editor. The FTL editor is integrated in the Festo Configuration Tool (FCT).

Convenient – easy programming via teach-in

When creating a motion program, the motion sequence is very often known but the precise position to be approached, for example of a gripper or a tray is not. These can only be determined directly during commissioning by means of accurate approaching. The CMXR in combination with the teach pendant CDSA offers dialogue-based software for this purpose, thus enabling quick and easy teach-in of the necessary positions.

Flexible – mobile operation and monitoring with CDSA

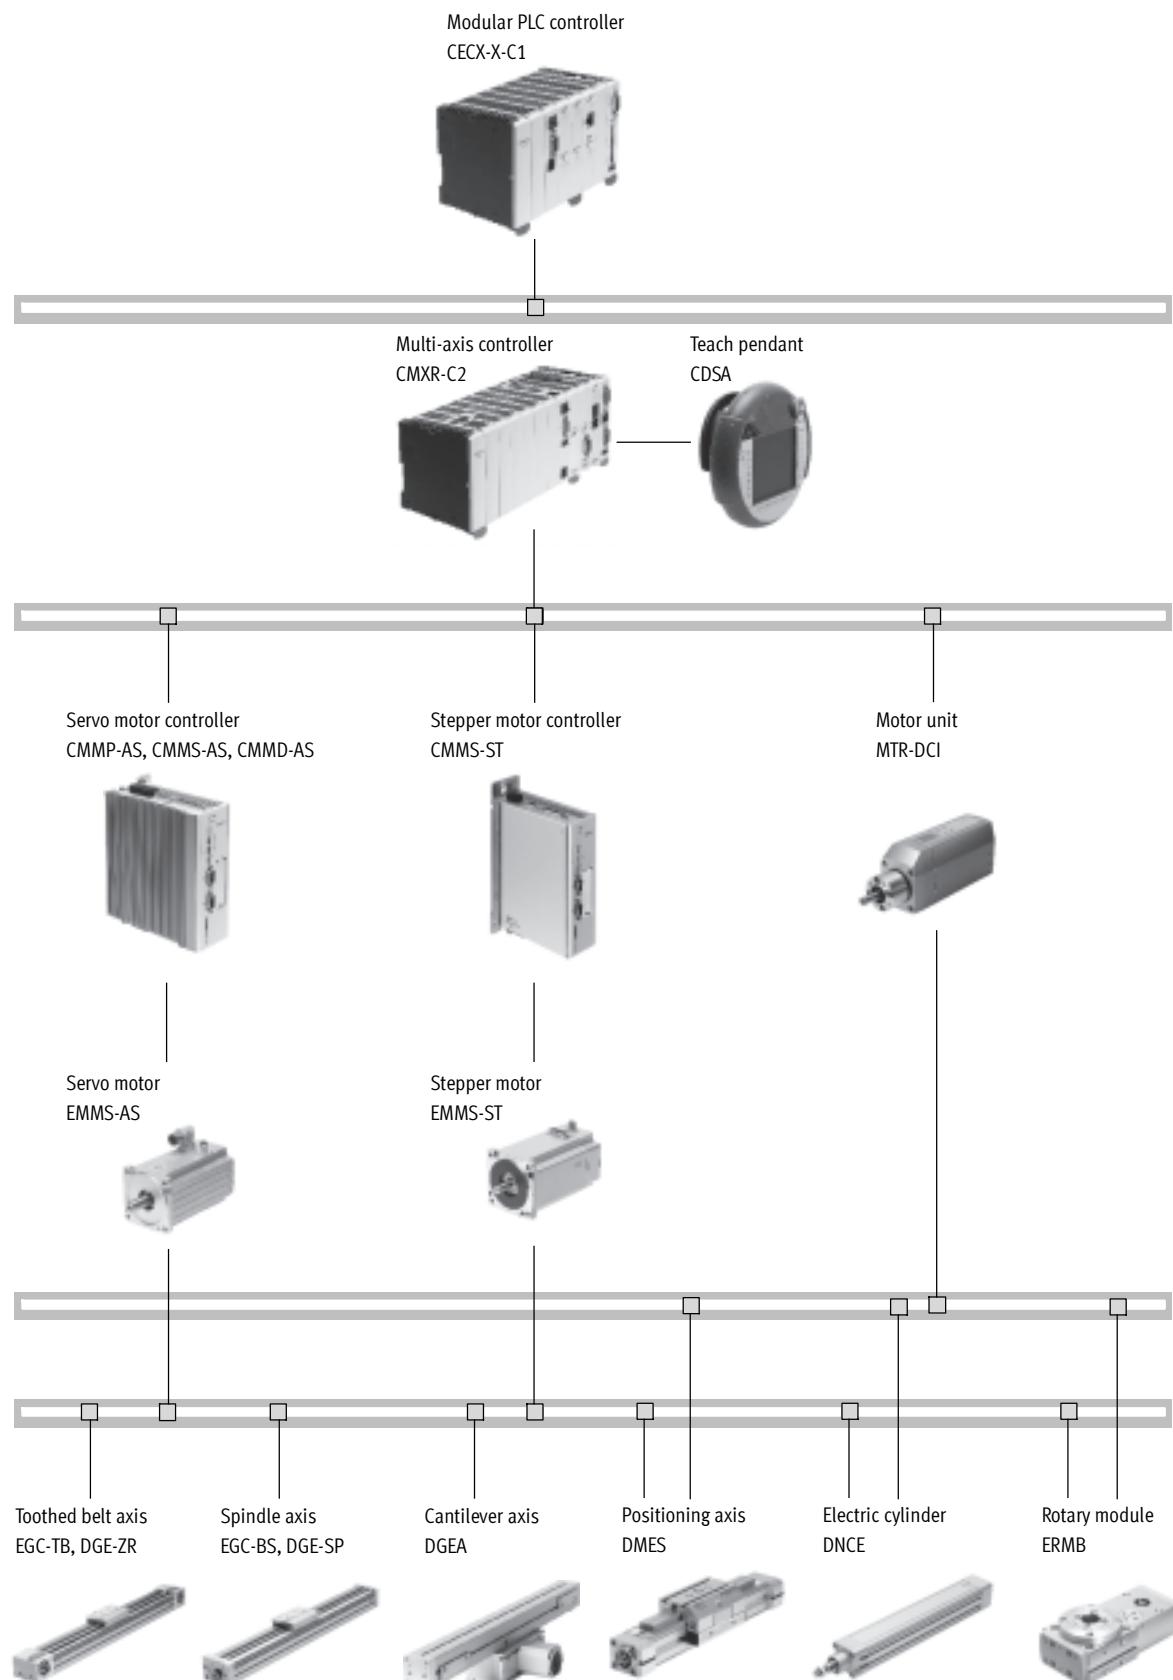

The teach pendant CDSA features an emergency stop switch as well as a 3-stage enabling key. Both devices are designed with two channels and are prepared for integration in the customer's safety circuits. The purpose of the enabling key is to approve the drive power during set-up. In addition to the hardware and ergonomic handle, the CDSA also features a colour touch screen as an alternative to the keypad for starting actions.

CECX-E-6E-T-P2

- With 4 or 6 temperature inputs

CECX-E-4E-T-P1 CECX-E-6E-T-P2

General technical data		
Type	CECX-E-4E-T-P1	CECX-E-6E-T-P2
Variant	4 temperature inputs	6 temperature inputs
Electrical connection technology for I/O	Socket strip, grid 5.08 mm	Gold contacts
Power consumption at 5 V [W]	0.3	0.6
Power consumption at 24 V [W]	2.5	1.6
Electrical protection class	III	
Product weight [g]	134	142
Materials		
Note on materials	Contains PWIS (paint-wetting impairment substances) RoHS-compliant	

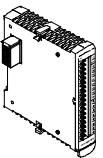

Technical data		
Type	CECX-E-4E-T-P1	CECX-E-6E-T-P2
Number	4	6
Resolution [bit]	14	
Signal range	PT100 (-100 ... +850 °C)	-
	-	Thermoelement
	-	Type J (Fe-CuNi, -100 ... +700 °C)
	-	Type K (NiCr-Ni, -100 ... +1,000 °C)
	-	Type L (Fe-CuNi, -100 ... +700 °C)
Value of the least significant bit (LSB) [°C]	0.058	-
Input resistance [Ω]	10×10^6	$> 10 \times 10^3$
Absolute accuracy at 25 °C	±0.01 %	±1.0 °C
Internal cycle time [ms]	2	100
Electrical isolation	No	Yes

Operating and environmental conditions		
Ambient temperature [°C]	5 ... 55	
Storage temperature [°C]	-40 ... +70	
Resistance to shock	EN 60068-2-27 EA	
	15 g, 11 ms (half sine)	
Resistance to vibration	EN 60068-2-6-FC	
	5 ... 9 Hz 3.5 mm	
	9 ... 150 Hz 1g	
Relative air humidity [%]	10 ... 95	
Protection class	IP20	
Certification	cULus listed (OL)

CECX-C-2G2 CECX-C-2G1

General technical data		
Type	CECX-C-2G2	CECX-C-2G1
Operating voltage range [V DC]	19.2 ... 30	
Nominal operating voltage [V DC]	24	
Electrical connection technology for I/O	Socket strip, grid 5.08 mm	
Power consumption at 5 V [W]	0.6	0.65
Electrical protection class	III	
Product weight [g]	135	140
Materials		
Note on materials	Contains PWIS (paint-wetting impairment substances) RoHS-compliant	

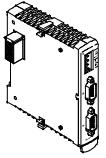

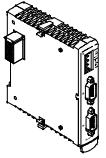

Technical data – Interfaces		
Type	CECX-C-2G2	CECX-C-2G1
Digital inputs		
Fast clock pulse inputs	2 (latch function) response time 20 µs NPN/PNP	–
Electrical isolation	No	–
Encoder inputs		
Number	2	4
Connection technology	Sub-D socket, 9-pin	RJ45
Resolution [bit]	Speed measurement: 32	16 ... 32
[bit]	Distance measurement: 24	Can be set via software
Encoder supply voltage [V DC]	24	24 (250 mA/channel)
[V DC]	5.05 ±4% (100 mA/channel)	–
Max. input frequency [kHz]	250	–
Baud rate [kbps]	–	125; 250; 500; 1,000
	–	Can be set via software
Signal range [V]	5 differential (RS422)	SSI (RS422)
[V]	24 single-ended	Binary/grey can be set using software
Electrical isolation	–	No

Technical data

Electrical interface

CECX-S-2S1

Peripheral module for extending the controller with two RS232 serial interfaces.

General technical data

Type	RS232
Number	2
Connection technology	Sub-D plug, 9-pin
Transmission rate [bps]	1,200 ... 115,000 Can be set via software
Power consumption at 5 V [W]	0.4
Status display	LED (status)
Electrical isolation	No
Protection class	IP20
Electrical protection class	III
Product weight [g]	132
Materials	
Note on materials	Contains PWIS (paint-wetting impairment substances) RoHS-compliant

Operating and environmental conditions

Ambient temperature [°C]	5 ... 55

Electrical interface

CECX-S-S4

Optional module for extending the controller with an RS485-A/422-A serial interface.

General technical data

Type	RS485-A/422-A
Number	1
Connection technology	Sub-D plug, 9-pin
Transmission rate [bps]	1,200 ... 115,000 Can be set via software
Electrical isolation	No
Electrical protection class	III
Product weight [g]	31
Materials	
Note on materials	Contains PWIS (paint-wetting impairment substances) RoHS-compliant

Operating and environmental conditions

Ambient temperature	[°C]	5 ... 55
Storage temperature	[°C]	-40 ... +70
Resistance to shock		EN 60068-2-27 EA 15 g, 11 ms (half sine)
