# Terminal CPX-P

Key features

## Variants for controlling the CPX-P terminal (with bus node, without preprocessing)

### Bus node

Different bus nodes are used to integrate the terminal in the control systems of various manufacturers. The CPX-P terminal can therefore be operated on commonly used fieldbus systems:

- PROFIBUS DP
- PROFINET
- DeviceNet

Integration in universal networks based on Ethernet opens up new possibilities. Faster data transmission, real-time capability and above all additional IT services such as file transfer, web server, web monitor as integrated website in the CPX-P

terminal, text message/e-mail alerts, etc. open up a wide range of synergies.

These include standardised and universal communication technology across all areas, including operating level, management level and field

level in the production environment, with protection to IP65. The following protocols are supported:

- EtherNet/IP
- Modbus/TCP
- PROFINET

### Bus node

- Communication with higher-order controller via fieldbus
- No preprocessing

- Fieldbus protocol dependent on CPX bus node used
- Up to 90 I/Os, depending on the bus node used

### Industrial Ethernet bus node

- Connection to a higher-order controller directly via EtherNet/IP, Modbus/TCP or PROFINET
- No preprocessing

- Monitoring via Ethernet and web applications
- Up to 300 I/Os

### Note

Every electrical connection can be combined with an appropriate number of I/O modules and/or pneumatic components, depending on its address capacity.

Likewise, every pneumatic variant of the CPX-P terminal can be operated with every electrical connection variant.

# Terminal CPX-P

Key features

## Connection of inputs and outputs to the CPX-P terminal

Digital and analogue CPX I/O modules

### Electrical connection

The connection technology for sensors and additional actuators offers a wide range of digital and analogue input and output modules and is freely selectable – as appropriate to your standard or application.

The input/output modules can be combined as required with the connection blocks:

- M12, 5-pin
- M12, 5-pin, with quick lock and metal thread
- M8, 3-pin
- M8, 4-pin
- Sub-D, 25-pin
- Harax®, 4-pin
- CageClamp® (with cover also to IP65/67)

## CPX modules for NAMUR sensors

### Electrical connection

The electronics modules for NAMUR sensors can only be combined with certain connection blocks.

The input modules can be combined as required with the connection blocks:

- M12, 4-pin
- Screw terminal and slotted terminal

## CPX modules for NAMUR sensors, intrinsically safe circuits for ATEX applications

- 1 Higher-order controller
- 2 Non-ATEX zone; non-intrinsically safe circuits are permitted
- 3 ATEX zone; only intrinsically safe circuits are permitted
- 4 CPX input module for NAMUR sensors, non-intrinsically safe design
- 5 CPX input module for NAMUR sensors, intrinsically safe design
- 6 Actuator/machine component with NAMUR sensors

CPX-P modules are suitable for configuring intrinsically safe or non-intrinsically safe circuits depending on the design selected. This enables components from both safe and hazardous zones to be connected to the CPX-P terminal. The components for the intrinsically safe zone are marked in blue or entirely coloured blue to distinguish them visually.

### Note

Intrinsically safe circuits are circuits which release so little energy during operation, or in the event of certain faults under specified test conditions, that no ignition can occur in a particular potentially explosive atmosphere.

# Terminal CPX-P

Key features

FESTO

## Pneumatic variants of the CPX-P terminal

With valve terminal MPA-S – centralised

The electrical CPX-P terminal is a modular peripheral system for valve terminals.

The system is specifically designed so that the valve terminal can be adapted to suit different applications.

The modular system design lets you configure the number of valves, inputs and additional outputs to suit the application.

## Ordering

The CPX-P terminal with valve terminal is fully assembled according to your order specifications and individually tested. The finished valve terminal consists of the electrical peripherals including the desired actuation and the selected components from the MPA-S modular system.

The CPX-P terminal with valve terminal is ordered using two separate order codes. One order code defines the electrical peripherals type CPX-P, while the other specifies the pneumatic components of the valve terminal.

The electrical peripherals type CPX-P can also be configured without a valve terminal and can be used on a fieldbus. For this order, only the order code for the electrical peripherals is required.

The order lists for the pneumatic components can be found on

FESTO

## Complete overview of modules

### End plate

- Mounting holes for wall mounting
- Functional earth connection

### Bus node

- Fieldbus/Industrial Ethernet connection using various types of connection technology
- Setting of fieldbus parameters via DIL switch
- Display of fieldbus and peripheral equipment status via LED

### Operator unit

- Connection to bus nodes or control block
- Display and modification of parameter settings
- Plain-text display for texts, messages (e.g. individual channel diagnostics, condition monitoring), menus, etc.

### Control block

- Remote unit CPX-FEC
- Connection via Ethernet TCP/IP or Sub-D programming interface
- Setting of operating modes via DIL switch and program selection via rotary switch

### Input/output modules

- Combination of
- Interlinking block
  - Electronics module
  - Connection block

# Terminal CPX-P

Peripherals overview

FESTO

## Complete overview of modules

### Input/output modules

#### 1 Interlinking block

- Internal linking of the power supply and serial communication
- External power supply for the entire system
- Additional power supply for outputs
- Connection accessories for 7/8"
- Individual linking with M6 screws, individually expandable

#### 2 Electronics module

- Digital inputs for connecting the sensors
- Digital outputs for activating additional actuators
- Analogue inputs
- Analogue outputs

#### 3 Connection block

- Choice of connection technology
- Protection class IP65 or IP20
- Can be combined with the electronics modules
- Connection accessories for M8/M12/Sub-D/quick connector, etc.
- M8/M12/Sub-D, etc. connecting cables
- Modular system for connecting cables

### Pneumatic interface

Peripherals overview

## Individual overview of modules

### Metal interlinking block – Individual linking

→ 86

#### System linking

- Different voltage values for supplying the modules
- Serial communication between the modules

#### System supply

- 7/8", 5-pin

In addition to system linking, power supply for the

- electronics plus sensors (8 A)
- valves plus actuators (8 A)

#### Additional power supply

In addition to system linking, power supply for the

- actuators (8 A per supply)

#### Expandability

- Can be expanded as required by up to 10 interlinking blocks

-  - Note

The 7/8" supply is subject to the following restriction due to the available accessories:

- 5-pin 8 A

### Pneumatic interface MPA-S

→ 92

#### Valve terminal

- MPA1 (360 l/min)
- MPA2 (700 l/min)
- Up to 128 solenoid coils
- Up to 16 modules can be configured

### End plate

#### End plate

- Left-hand
- Right-hand (for use without valves)

# Terminal CPX-P

Peripherals overview

## General basic data and guidelines

Max. 11 modules in total:

- One bus node and/or one control block
- Up to 9 additional input/output modules
- In addition a pneumatic interface
  - Always positioned as the last module on the right-hand side
  - 16 MPA modules can be configured

- Address capacity max. 512 inputs and 512 outputs, depending on bus node or control block
- One interlinking block with system supply
- Multiple interlinking blocks with additional power supply, always positioned to the right of the interlinking block with system supply

- The connection blocks can, with a few exceptions, be combined with the electronics modules for inputs/outputs (→ table below)
- The electronics modules for inputs/outputs can be combined with various interlinking blocks

Key features – Electrical components

## Electrical connection – Connection block with M8, 3-pin connection

CPX-AB-8-M8-3POL

- Compact for pre-assembled individual connection
- 8 sockets
- 3-pin design for connecting 1 channel per socket

-  - Note

Festo delivers pre-assembled M8/M12 connecting cables (NEBU modular system) on request:

- Tailored to the application
- Perfect fit
- Saves installation

# Terminal CPX-P

Key features – Electrical components

## Electrical connection – Connection block with spring-loaded terminal connection

CPX-AB-8-KL-4POL

- Quick connection technology for use in control cabinets
- 32 spring-loaded terminals
- 4 spring-loaded terminals per channel
- Wire cross sections 0.05 ... 1.5 mm<sup>2</sup>
- Optional cover with fittings for IP65/67 connection
  - 8 through-holes M9
  - 1 through-hole M16
  - Blanking plug
  - For I/O distributors, consoles or individual sensors/actuators

### Combination of connection block and electrical connection technology

Connection block	Connection technology	Plug connector/connecting cable	Selectable connection technology
1] CPX-AB-8-KL-4POL	Spring-loaded terminals, 32-pin	2] AK-8KL (cover)	–

## Electrical connection – Connection block with clamping connector

CPX-P-AB-2XKL-8POL and CPX-P-AB-2XKL-8POL-8DE-N-IS

- Quick connection technology for use in control cabinets
- Spring-loaded terminals or screw terminals
- Wire cross sections 0.2 ... 2.5 mm<sup>2</sup>

### Combination of connection block and electrical connection technology

Connection block	Connection technology	Plug connector/connecting cable	Selectable connection technology
1] CPX-P-AB-2XKL-8POL	Plug, 8-pin	2] NECU-L3G8-C1	Spring-loaded terminals

# Terminal CPX-P

Key features – Electrical components

## Electrical connection – Connection block with Sub-D connection

CPX-AB-1-SUB-BU-25POL

- Multi-pin plug connection for I/O distributor or console
- One socket, Sub-D
- 25-pin design

### Combination of connection block and electrical connection technology

Connection block	Connection technology	Plug connector/connecting cable	Selectable connection technology
1 CPX-AB-1-SUB-BU-25POL	Socket, Sub-D, 25-pin	2 SD-SUB-D-ST25	Crimp contacts

## Electrical connection – Connection block with quick connector

CPX-AB-4-HAR-4POL

- Sturdy quick connection technology for individual connections
- 4 sockets
- 4-pin design per socket

### Combination of connection block and electrical connection technology

Connection block	Connection technology	Plug connector/connecting cable	Selectable connection technology
1 CPX-AB-4-HAR-4POL	Socket, quick connection, 4-pin	2 SEA-GS-HAR-4POL	Insulation displacement connectors

# Terminal CPX-P

Key features – Assembly

**Hood**  
Description → 98

The CPX hood CAFC is a space and cost-saving alternative to a control cabinet. It is designed as an extruded aluminium profile and is installed on a mounting plate. The valve terminal is well protected and is quick to install without the need for complex control cabinet installation for cables and tubing.

The rail and the two mounting brackets are mounted on a back plate. The hood is attached to the retaining rail and secured with two screws. There is also a stand-by position (locking of the hood in the open position). The hood is locked using two side screws (which meet the requirements for a special lock in compliance with ATEX). The CPX hood can be ordered online using the valve terminal configurator.

**Advantages of the CPX hood**

- Impact protection (min. 7 J) for the underlying modules in combination with a suitable mounting plate provided by the user
- Protection against electrostatic discharge through the use of electrically conductive materials and the option of connecting an earth wire
- Protection against disconnection of live plug connectors (by securing the hood with at least one special lock to EN 600079-0, 9.2 and 20)
- UV protection for the underlying CPX-P and MPA modules

**Points to note when using the CPX hood**

- CPX-P power supply via angled plugs, no T-plugs
- Electrical supply plate/additional power supply only possible with angled plug
- No MPA vertical stacking
- Use of larger QS fittings (for tubing O.D. larger than 12 mm) only possible with the angled design
- Ducted exhaust air only with elbow connector
- The permissible ambient temperature of the valve terminal is reduced by 5 °C

 - Note

The CPX hood has no influence on the ATEX classification of the valve terminal or of the CPX terminal.

The CPX hood has no influence on the IP protection class of the valve terminal or of the CPX terminal.

The CPX hood does not protect against the effects of the weather in installations that are not in closed spaces.

# Terminal CPX-P

Key features – Assembly

## Hood Assembly

### Procedure:

- Assemble the rail and mounting bracket included in the mounting kit
- Attach the earth cable
- Assemble the hood (if applicable, screw together several hood sections before attaching the side pieces)
- Attach and secure the hood

- 1 Side piece
- 2 Earth cable
- 3 Hood section
- 4 Slot nut with screws, for joining the hood sections
- 5 Rail
- 6 Mounting bracket

## Technical data

### Weight:

- Hood: approx. 500 g per 100 mm of length

- Mounting rail: approx. 550 g per 1,000 mm of length
- Side pieces: approx. 500 g per side

- Ambient temperature  $-5 \dots +50 \text{ }^{\circ}\text{C}$

- RoHS-compliant

## Plug coding

The connection blocks CPX-P-AB-2XKL-8POL, CPX-P-AB-2XKL-8POL-8DE-N-IS and the sockets NECU-L3G8 can be matched to one another using the coding elements CPX-P-KDS-AB-2XKL.

This reduces the likelihood of a socket being inserted in the wrong slot after it is removed from the CPX-P terminal (protection against incorrect insertion).

# Terminal CPX-P

Key features – Assembly

## Mounting options

Valve terminals with CPX-P terminal support different mounting options for direct machine mounting with high

protection and control cabinet installation.

### H-rail mounting

The rear profile of the CPX-P interlinking block has a preformed H-rail mounting so that the CPX-P terminal can be attached to the H-rail using the H-rail mounting kit. The CPX-P terminal is mounted on the H-rail (see arrow A) and

then swivelled onto the H-rail and secured in place with the clamping component (see arrow B). The optional earthing plate enables a connection to be established to the machine potential/earth in one easy step.

For H-rail mounting you will need the following mounting kit:

- CPX-CPA-BG-NRH

This facilitates mounting of the CPX-P terminal on H-rails to EN 60715. An additional mounting kit is required for combination with valve terminals.

### Wall mounting

The end plates of the CPX-P terminal, the valve terminal and the pneumatic interface include mounting holes for wall mounting. Additional mountings for the CPX-P terminal are available for longer valve terminals.

### Additional mounting components

Additional mounting brackets for the CPX-P terminal that can be screwed onto the interlinking blocks are available for longer valve terminals.

 Note

For CPX-P terminals with 4 or more interlinking blocks: you will require additional mounting brackets of the type CPX-M-BG-RW approx. every 100 or 150 mm. These are supplied pre-assembled.

### Linking with screws

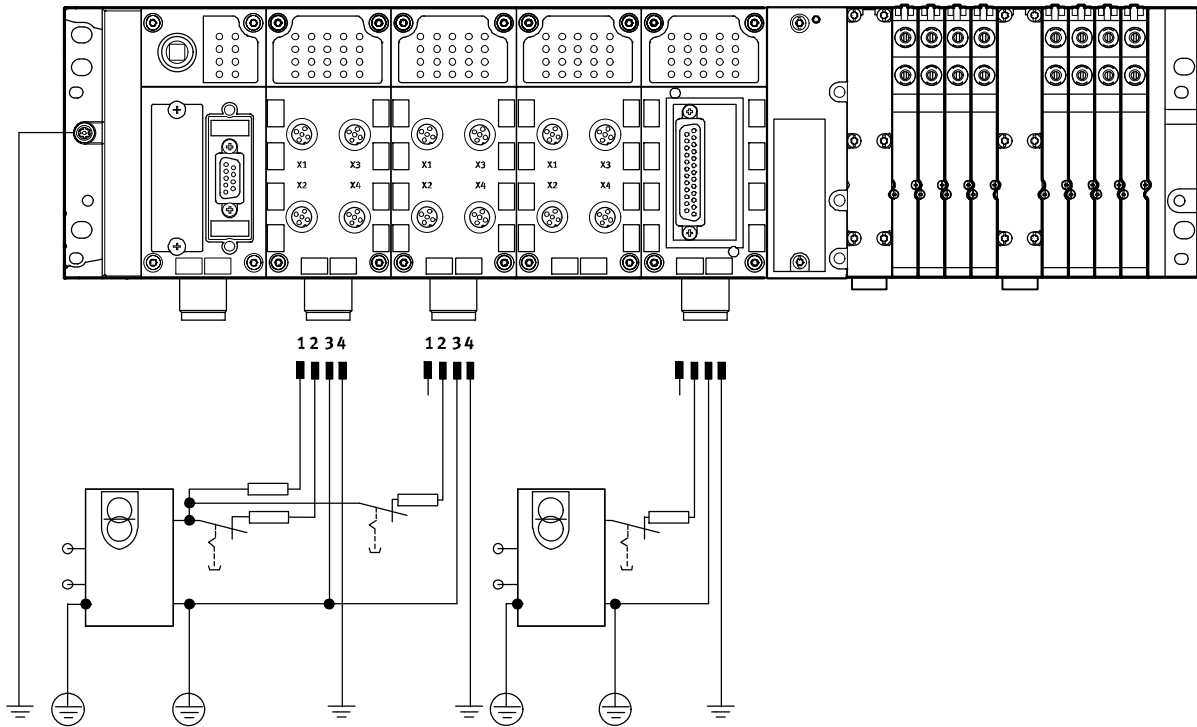

The mechanical connection between the CPX-P modules is created using special angle fittings. The CPX-P terminal can thus be expanded at any time.

# Terminal CPX-P

Key features – Power supply

## Power supply concept

General information

The use of decentralised devices on the fieldbus – particularly with high protection for direct machine mounting – demands a flexible power supply

concept. A valve terminal with CPX-P can, in principle, supply all voltages via a single connection.

A distinction is made between supply for

- electronics plus sensors
- valves plus actuators.

Connection technology:

- 7/8"

## Interlinking blocks

Interlinking blocks represent the backbone of the CPX-P terminal with all supply lines. They provide the power supply for the modules used on

them as well as their bus connections. Many applications require the CPX-P terminal to be segmented into voltage zones. This applies in particular to the

separate disconnection of the outputs. The interlinking blocks provide either a space-saving central power supply for the entire CPX-P terminal or

galvanically isolated, all-pin disconnectable potential groups/voltage segments.

# Terminal CPX-P

Key features – Power supply

## Interlinking blocks

With system supply

- CPX-M-GE-EV-S-7/8-5POL
- CPX-M-GE-EV-S-7/8-5POL-VL

Connection technology

- 7/8", 5-pin

- For CPX-P terminal modules and connected sensors
- For valves that are connected to the CPX-P terminal via a pneumatic interface

- For actuators that are connected to output modules of the CPX-P terminal

Without power supply

- CPX-M-GE-EV

With additional power supply for outputs

- CPX-M-GE-EV-Z-7/8-5POL
- CPX-M-GE-EV-Z-7/8-5POL-VL

Connection technology

- 7/8", 5-pin

- For actuators that are connected to output modules of the CPX-P terminal

-  - Note

For 7/8":

- Commercially available accessories are often limited to max. 8 A

-  - Note

Valve terminal MPA-S has either a 5-pin 7/8", 4-pin 7/8" or 3-pin M18 power supply for one or more valve voltage zones. Galvanically isolated,

all pins disconnectable with voltage monitoring in the following MPA module.

# Terminal CPX-P

Key features – Diagnostics

## Diagnostics

System performance

- 1 Undervoltage monitoring
- 2 Diagnostics via bus interface
- 3 Diagnostic overview LED
  - Fieldbus status
  - CPX-P status
- 4 Status and diagnostic LED for module and I/O channels
- 5 Module and channel-specific diagnostics
- 6 Valve-specific diagnostic module and solenoid coils

Detailed diagnostic functions are needed in order to quickly locate the causes of errors in the electrical installation and therefore reduce downtimes in production plants. A basic distinction is made between on-the-spot diagnostics using LEDs or an operator unit (CPX-MMI) and diagnostics using a bus interface.

The CPX-P terminal supports on-the-spot diagnostics via a row of LEDs. This is separate from the connection area and therefore provides good visual access to status and diagnostic information.

Module and channel-specific diagnosis is supported, for example

- Undervoltage detection for outputs and valves
- Short circuit detection for sensors, outputs and valves
- Open-load detection for a missing solenoid coil
- Storage of the last 40 causes of errors with error start and error end

The diagnostic messages can be read out via the bus interface in the higher-order controller and visualised for the central recording and evaluation of error causes. This is done using the individual fieldbus-specific channels. The CPX-FEC also offers the option of access via the integrated Ethernet interface (remote maintenance via PC/web applications).

## Overview of LEDs on the bus node

- 1 Fieldbus-specific LEDs
 

On each bus node, a maximum of 4 fieldbus-specific LEDs display the fieldbus communication status of the CPX-P terminal with the higher-order controller.
- 2 CPX-P-specific LEDs
 

A further 4 CPX-P-specific LEDs provide non-fieldbus-specific information about the status of the CPX-P terminal, for example

  - Power system
  - Power load
  - System fault
  - Modification parameters

## Input/output module status and diagnostic LEDs

- 1 Status LEDs for the inputs and outputs
 

Each input and output channel is assigned a status LED.
- 2 Channel-oriented diagnostic LEDs
 

Depending on the module design, another diagnostic LED is available for each I/O channel.
- 3 Group diagnostic LEDs
 

An LED displays the group diagnostics for each module.

# Terminal CPX-P

Key features – Parameterisation

## Diagnostics

Display on the operator unit (CPX-MMI)

- 1 LCD graphical display for on-site plain-text diagnostics
  - Fault location and type
  - Without programming

Display on a PC

- 1 CPX-P terminal with valve terminal
  - 2 Adapter diagnostic interface to USB
  - 3 Laptop/portable device with USB interface and installed CPX-P
- Maintenance Tool (CPX-FMT) software
- Fault location and type
  - Without programming
  - Storing the configuration
  - Preparing screenshots

## Parameterisation

Changes to the application are often required during commissioning. The parameterisable characteristics of the CPX-P modules mean that functions can be very easily changed by means of configuration software. This reduces

the number of modules needed and, consequently, the amount of storage space required.

It is therefore possible, for example, to reduce the input debounce time for an input module – normally 3 ms – to

0.1 ms on a "fast" input module for faster processes, or to set the response of a valve following a fieldbus interrupt.

Depending on the modules used, parameterisation can be performed

via the following interfaces:

- Ethernet
- Fieldbus
- Control block direct interface (programming interface)
- Operator unit CPX-MMI

- 1 Input debounce time 3 ms
- 2 Input debounce time 0.1 ms

# Terminal CPX-P

Key features – Addressing

## Addressing

The various CPX-P modules occupy a different number of I/O addresses within the CPX-P system. The maximum address space for bus nodes depends on the performance of the fieldbus systems.

Maximum system configuration:

- 1 bus node or control block
- 9 I/O modules
- 1 pneumatic interface (e.g. pneumatic interface MPA-S with up to 16 MPA manifold sub-bases)

The maximum system configuration can be limited in individual cases by exceeding the address space.

Note

Please refer to the detailed description of the configuration/addressing rules in the technical data for CPX bus nodes.

## Overview – Allocated addresses for CPX-P modules

	Inputs [bit]	Outputs [bit]
CPX-P-8DE-N	16	8
CPX-P-8DE-N (inputs configured as counter)	80	16
CPX-P-8DE-N-IS	16	8

VMPA-FB-PS-3/5	16	–
VMPA-FB-PS-P1	16	–
VMPA-FB-EMG-P1	16	16

## Overview – Address space for CPX bus node and control block

	Protocol	Max. total		Max. digital		Max. analogue	
		Inputs	Outputs	Inputs	Outputs	Inputs	Outputs
CPX-FEC	<ul style="list-style-type: none"> <li>• EasyIP</li> <li>• Modbus TCP</li> </ul>	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-FB11	DeviceNet	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-FB13	PROFIBUS	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-FB32	EtherNet/IP	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO
CPX-FB33	PROFINET RT	512 bits	512 bits	512 DI	512 DO	32 AI	18 AO

Note

The bandwidth of the bus nodes can be restricted by the choice of module and the maximum number of modules.

# Terminal CPX-P

Technical data

-  - Module width  
50 mm

-  - Note  
The data given here apply to the CPX-P system. If components that conform to lower values are used in the system, the specification for the entire system is reduced to the values of those components.

**Example**  
Protection class IP65 applies only to the fully assembled system with fitted plugs or covers (which must also conform to IP65). If components with a lower protection class are used, the

protection level of the entire system is reduced to the protection class of the component with the lowest protection level, for example CageClamp connection block with IP20 protection.

General technical data		
Module No.		562818

## User documentation

Comprehensive user manuals are vital for the fast and reliable use of fieldbus components.

The manuals provided by Festo contain step-by-step instructions for using the CPX-P terminal:

1. Installation
2. Commissioning and parameterisation
3. Diagnostics

Application-oriented explanations are provided for integration of the CPX-P terminal in the programming and configuration software of the various controller manufacturers.

Use the order code to select the language you want.

The manual for the configuration you have ordered is supplied automatically.

Device description files and icons are used to explain the integration of the CPX-P terminal in the configuration software of the various controller manufacturers.

The documents can be downloaded quickly and easily from the Festo website.

# Terminal CPX-P

Technical data – Operator unit CPX-MMI-1

FESTO

-  - Width  
81 mm

The operator unit is a small, convenient commissioning and service device for the CPX-P terminal. It provides data polling, configuration and diagnostic functions for CPX-P terminals. Its extremely flexible application range means that data can be read in or out at any location. IP65 compatibility makes it suitable for use in harsh industrial environments.

## Application

### Functions

- Advance commissioning through the monitoring/forcing of inputs and outputs without fieldbus master/PLC
- Test function for parameter settings, for example fail-safe of the outputs or switch-on delay of the inputs
- Plain-text diagnostics of module and channel-oriented errors
- Condition monitoring: preselection/loading of counters, activation of the channels to be monitored
- Display of the last 40 error occurrences with timestamp
- Identification of sporadic causes of errors through display of the diagnostic history
- Password protection

### Connection

The operator unit is connected to the CPX bus nodes or control block, as appropriate, using a pre-assembled M12 cable.

The voltage for the operator unit is supplied by the CPX-P component

### Communication

Once connected to the CPX-P terminal, the operator unit loads the available configuration for the I/O modules, valves, etc.

This ensures the availability of up-to-date texts, messages, menus and displays.

Status information, diagnostic messages and parameter bits are then exchanged during operation.

### Assembly

A mounting bracket for the operator unit offers the option of wall or H-rail mounting.

The mounting bracket also has an option for temporary mounting using a hanging device.

# Terminal CPX-P

Technical data – Operator unit CPX-MMI-1

## Connection

The operator unit is connected to the CPX-P terminal using pre-assembled cables.

## Function examples

### System overview

- Overview of configured modules and current diagnostic messages

### Diagnostics

- Fast access to the diagnostic history and the modules with diagnostic messaging
- Display of the last 40 diagnostic messages with timestamp
- Display of the current diagnostic message for a module

### Commissioning

- Selection of module-specific data and parameters
- Display and modification of the current status of the inputs and outputs of a module
- Display and modification of the current settings for module-specific parameters

### Setup

- Setting of access permission (password)
- Contrast setting of the display

# Terminal CPX-P

Technical data – CPX Maintenance Tool

## Function

CPX-P Maintenance Tool (CPX-FMT) combines service software with a connecting adapter. The service software is a tool for the design, parameterisation and online diagnostics of the CPX-P terminal. The USB-to-M12 adapter features built-in galvanic isolation (between CPX-P and PC) and enables a PC to be connected to the diagnostic interface of the CPX-P terminal.

- Adapter
- Software on CD-ROM

## Application

Only from Festo

The CPX-FMT software enables access to CPX-P valve terminals via Ethernet with the control block CPX-FEC and the bus nodes EtherNet/IP (FB 32) and PROFINET (FB 33, FB 34, FB 35). The bus nodes or control block can be connected directly to the PC via a USB adapter from Festo. Similar to the operator unit (CPX-MMI), diagnostic data such as the error trace or module

diagnostics can be read out and parameters can be modified in plain text. In contrast to the operator unit (CPX-MMI), the data can be used directly on a PC. There is an option, for example, to send screenshots of a configuration or the current error trace directly via e-mail. In addition, CPX-P configurations can also be saved and

archived directly as a CPX-FMT project. Undocumented changes can subsequently be identified using the online/offline comparison function. On-site tests such as the actuation of valves or the emulation of sensor feedback (in both cases called "forcing"), for example, can be performed without an existing

controller infrastructure. It must be noted that with both the CPX-P Maintenance Tool (CPX-FMT) and the operator unit (CPX-MMI), only local parameters on the CPX-P valve terminal can be changed and saved. The configuration of the networks or controller software cannot be influenced.

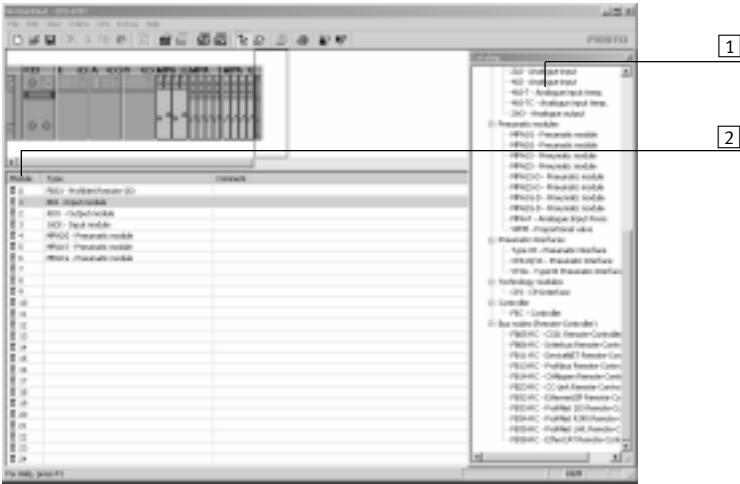

General technical data

# Terminal CPX-P

Technical data – CPX Maintenance Tool

## Display components

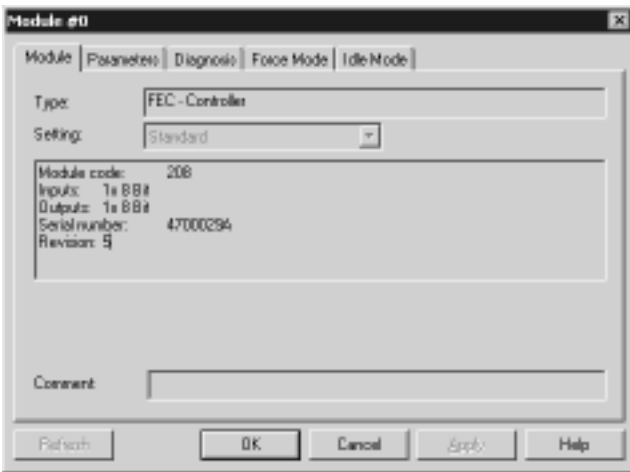

Creating a device configuration using the editor

The device configuration can be conveniently generated, parameterised and saved using the drag & drop feature. You can insert and move modules.

- 1 Module numbers from the graphic system overview
- 2 Catalogue for selecting required modules

## Module overview for a selected module

Displays important module data as well as the number of allocated inputs and outputs.

## Diagnostic memory

Faults which occur during operation are entered in a diagnostic memory. The first or the last 40 entries are saved, as well as the respective time measured from the moment the power supply was switched on.

# Terminal CPX-P

Technical data – Control block CPX-FEC

**IT services:**

Powerful control block for pre-processing actuation of the CPX-P modules.

The power supply to and communication with other modules takes place via the interlinking block.

In addition to the connection for the Ethernet interface in RJ45 and a programming interface in Sub-D, LEDs are also provided for the bus status, operating status of the PLC and CPX-P peripherals information, as are switching elements and a diagnostic interface for the operator unit (CPX-MMI) and CPX-P Maintenance Tool (CPX-FMT).

**Application**

<b>Bus connection</b>	<b>Modbus/TCP (code T05)</b>
The CPX-FEC is a remote controller that can be connected to a master PLC via Ethernet.	Transmits data in binary format within TCP/IP packets. This ensures good data throughput.

<b>Operating mode</b>	<b>Communication protocols</b>		
<ul style="list-style-type: none"> <li>Remote I/O Modbus/TCP</li> </ul>	<ul style="list-style-type: none"> <li>Modbus/TCP</li> <li>EasyIP</li> </ul>	<ul style="list-style-type: none"> <li>IP</li> <li>TCP</li> <li>UDP</li> <li>SMTP</li> </ul>	<ul style="list-style-type: none"> <li>HTTP</li> <li>DHCP</li> <li>BootP</li> <li>TFTP</li> </ul>

<b>Setting options</b>			
CPX-FEC has the following interfaces for monitoring, programming and commissioning:	<ul style="list-style-type: none"> <li>Operator unit (CPX-MMI)</li> <li>CPX-P Maintenance Tool (CPX-FMT)</li> <li>Serial interface RS232, for example, for a Front End Display (FED)</li> <li>Ethernet interface for IT applications</li> <li>Remote diagnostics</li> </ul>	The operating mode and fieldbus protocol are set using the DIL switch on the CPX-FEC.	The integrated web server offers a convenient means of querying data saved in the CPX-FEC.

# Terminal CPX-P

Technical data – Bus node CPX-FB11

Bus node for handling communication between the electrical CPX-P terminal and a DeviceNet network.

The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.

The status of the CPX-P terminal is displayed as a common message via four CPX-P-specific LEDs.

The fieldbus communication status is displayed via the three DeviceNet-specific LEDs.

## Application

### Bus connection

The bus connection can be selected when ordering, either Micro Style as 2xM12 round connectors or Open-Style as a terminal strip with IP20 protection.

Both connection types have the function of an integrated T-distributor with incoming and outgoing bus line.

### DeviceNet implementation

The CPX-FB11 operates with the "Predefined Master/Slave Connection Set" as a "Group 2 Only Server". The polled I/O, change of state or cyclic method is used for the transmission of cyclic I/O data. The type of transmission can be selected in the network configuration.

The device diagnostics for all bus nodes CPX-FB11 is effectively gathered via strobed I/O and displayed in the input table of the controller.

In addition to cyclic data transmission, acyclic communication is supported through explicit messaging, which enables detailed device diagnostics and parameterisation.

A comprehensive EDS file supports the display of acyclic data. It is also possible to display system information and assign parameters while the controller is running via the user program or the configuration software.

An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.

With its address capacity of 64 byte inputs and 64 byte outputs, the CPX-FB11 supports any configuration of I/O modules, including pneumatic interface.

### Points to note in connection with CPX-FEC/CPX-CEC

When a bus node is combined with a control block (CPX-FEC, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX-P control block.

In this case, the bus node only provides the communication interface to the PLC.

Communication between the control block and CPX-P bus node is

established by interlinking the CPX-P modules and occupies the following address capacity in the CPX-P system:

- 8 byte outputs
- 8 byte inputs

The remaining address capacity of the control block or CPX-P system for actuating the peripherals is:

- 56 byte inputs
- 56 byte outputs

# Terminal CPX-P

Technical data – Bus node CPX-FB13

Bus node for handling communication between the electrical CPX-P terminal and a higher-order master via PROFIBUS DP.

The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.

The status of the CPX-P terminal is displayed as a common message via four CPX-P-specific LEDs.

The fieldbus communication status is displayed via the PROFIBUS-specific error LED.

## Application

### Bus connection

The bus connection is established via a 9-pin Sub-D socket with a typical PROFIBUS allocation (to EN 50170).

The bus connector plug (with IP65/IP67 protection from Festo or IP20 protection from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable.

An active bus terminal can be connected using the DIL switch integrated in the plug.

The Sub-D interface is designed for controlling network components with a fibre-optic cable connection.

### PROFIBUS DP implementation

The CPX-FB13 supports the PROFIBUS DP protocol to EN 50170 Volume 2 for cyclic I/O exchange, parameterisation and diagnostic functions (DPV0).

In addition to DPV0, acyclic communication to the advanced specification DPV1 is supported. DPV1 provides acyclic access to advanced system information and assigns operation parameters while the controller is running via the user program.

An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.

With its address capacity of 64 byte inputs and 64 byte outputs, the CPX-FB13 supports any configuration of I/O modules, including pneumatic interface.

### Points to note in connection with CPX-FEC/CPX-CEC

When a bus node is combined with a control block (CPX-FEC, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX-P control block.

In this case, the bus node only provides the communication interface to the PLC.

Communication between the control block and CPX-P bus node is

established by interlinking the CPX-P modules and occupies the following address capacity in the CPX-P system:

- 8 byte outputs
- 8 byte inputs

The remaining address capacity of the control block or CPX-P system for actuating the peripherals is:

- 56 byte inputs
- 56 byte outputs

# Terminal CPX-P

Technical data – Bus node CPX-FB32

Bus node for handling communication between the electrical CPX-P terminal and the EtherNet/IP network.

The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules.

The status of the CPX-P terminal is displayed as a common message via four CPX-P-specific LEDs.

## Application

**Bus connection**  
The bus connection is established via an M12 plug, D-coded to IEC947-5-2 with IP65, IP67 protection. EtherNet/IP is an open bus system based on the Ethernet standard and TCP/IP technology (IEEE802.3).

**EtherNet/IP implementation**  
The CPX-FB32 supports the two operating modes remote I/O and remote controller. In remote I/O operating mode, all functions of the CPX-P valve terminal are directly controlled by the EtherNet/IP master (host). In addition to actuation via a bus system, it is possible to use IT technologies. An integrated web server enables diagnostic data to be visualised via HTML. Various programs support direct access to the data of the device from the automation network. The EtherNet/IP node for CPX-P supports the transmission technology that conforms to DIN EN 50173/CAT 5.

**Points to note in connection with CPX-FEC/CPX-CEC**  
When a bus node is combined with a control block (CPX-FEC, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX-P control block. In this case, the bus node only provides the communication interface to the PLC. Communication between the control block and CPX-P bus node is established by interlinking the CPX-P modules and occupies the following address capacity in the CPX-P system:  

- 8 byte outputs
- 8 byte inputs

 The remaining address capacity of the control block or CPX-P system for actuating the peripherals is:  

- 56 byte inputs
- 56 byte outputs

# Terminal CPX-P

Technical data – Bus node CPX-FB33

Bus node for operating the CPX-P valve terminal on PROFINET. The bus node is provided with system supply via the interlinking block and processes communication with the I/O modules. The status of the CPX-P terminal is displayed as a common message via four CPX-P-specific LEDs. The fieldbus communication status is displayed via three bus-specific LEDs.

Application			
<b>Bus connection</b>			
The bus connection is established via two M12 sockets, D-coded to IEC61076-2-101 with IP65, 67 protection.	Both connections are equivalent 100BaseTX Ethernet ports with integrated auto MDI functionality	(cross-over and patch cables can be used) that are brought together via an internal switch.	<ul style="list-style-type: none"> <li>• Maximum segment length 100 m</li> <li>• Baud rate 100 Mbps</li> </ul>
<b>PROFINET implementation</b>			
The CPX-FB33 supports the PROFINET protocol based on the Ethernet standard and the TCP/IP technology to IEEE802.3. This guarantees a data exchange with a high data transmission rate, for example I/O data from sensors, actuators or robot controllers, PLCs or	process equipment. In addition, non-real-time critical information such as diagnostic information, configuration information, etc. can be transferred. The Ethernet bandwidth is sufficient to transfer both data types (real-time and non-real-time) in parallel.	The bus node features LEDs for bus status and CPX-P peripheral information as well as switch elements, memory stick and a diagnostic interface. The purpose of the memory stick is to guarantee fast replacement of the bus node in the event of an error. PROFINET provides the user with	access to all peripherals, diagnostic data and parameter data of the CPX-P valve terminal. The bus node can be used as a remote I/O or remote controller. All information relevant to the CPX-P can be read out and, depending on the function, changed via an operator unit (CPX-MMI).
<b>Points to note in connection with CPX-FEC/CPX-CEC</b>			
When a bus node is combined with a control block (CPX-FEC, CPX-CEC, in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are controlled via the CPX-P control block.	In this case, the bus node only provides the communication interface to the PLC. Communication between the control block and CPX-P bus node takes place	by interlinking the CPX-P modules and takes up the following address capacity in the CPX-P system: <ul style="list-style-type: none"> <li>• 8 byte outputs</li> <li>• 8 byte inputs</li> </ul>	The remaining address capacity of the control block or CPX-P system for actuating the peripherals is: <ul style="list-style-type: none"> <li>• 56 byte inputs</li> <li>• 56 byte outputs</li> </ul>

Technical data – Input module, digital, NAMUR

## Function

Digital input modules enable the connection of up to eight NAMUR sensors (or wired mechanical contacts). In addition, the first four channels can alternatively be used as counters or for frequency measurement. M12 and terminal strip connection technology can be used.

## Applications

- Input modules for 24 V DC sensor supply voltage
- Module features can be parameterised
- The input module receives the voltage supply for the electronics and the sensors from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection in each channel

General technical data		
Number of inputs		8
Max. cable length	[m]	200
Input debounce time	[ms]	3 (0, 10, 20 parameterisable)
Fuse protection (short circuit)		Internal electronic fuse for each channel

		–	ZELM 12 ATEX 0500 X

 Note  
The module CPX-P-8DE-N-IS has additional safety measures for possible faults such as non-resettable fuses to ensure safe operation as per the ignition protection type. If the module is operated within the permissible parameters, these protective measures will be irrelevant.

 Note  
Only the end plate, the pneumatic interface or another module in intrinsically safe design are permitted directly to the right of modules in intrinsically safe design (CPX-P-8DE-N-IS) within the CPX-P terminal.

 Note  
The insulating plate CPX-P-AB-IP must be mounted between a module in intrinsically safe design (CPX-P-8DE-N-IS) and another, non-intrinsically safe CPX input or output module.

 Note  
The above-mentioned certifications for the CPX-P-8DE-N-IS module do not apply if the module is used outside the appropriately configured terminal CPX-P.

Technical data – Input module, digital, 16 inputs

## Function

Digital input modules enable the connection of two-wire and three-wire sensors (proximity sensors, inductive or capacitive sensors, etc.).

Depending on the connection block selected, the module supports various connection concepts with different numbers of sockets (single or double allocation).

## Applications

- Input modules for 24 V DC sensor supply voltage
- PNP logic
- Module features can be parameterised
- The input module receives the voltage supply for the electronics and the sensors from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection

General technical data

# Terminal CPX-P

Technical data – Analogue module for inputs

## Function

Analogue modules control devices with a standardised analogue interface such as sensors for pressure, temperature, flow rate, filling level, etc.

Depending on the connection block selected, the analogue module supports various connection concepts with different numbers of sockets or terminals.

## Applications

- Analogue module for 0 ... 10 V, 0 ... 20 mA or 4 ... 20 mA
- Supports connection blocks with M12, Sub-D and terminal connection
- Analogue module features can be parameterised
- Different data formats available
- Operation with and without galvanic isolation possible
- The analogue module receives the voltage supply for the electronics and the sensors from the interlinking block
- Analogue module protection and diagnostics through integrated electronic fuse protection

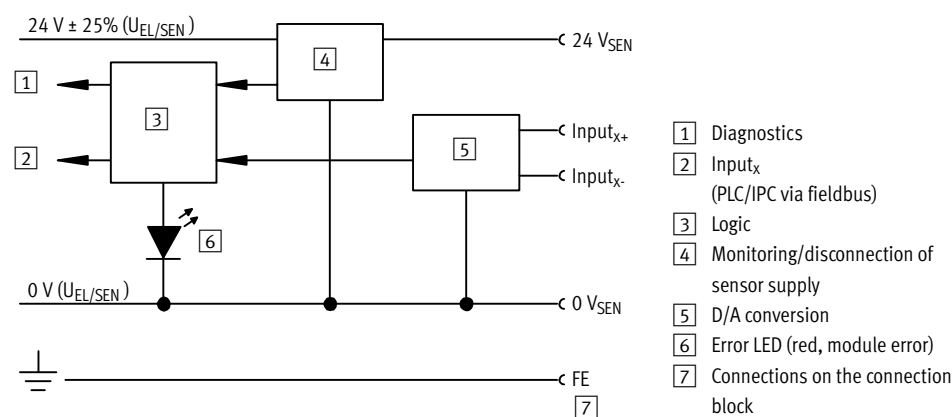

General technical data		
Type	CPX-4AE-U-I	
	Voltage input	Current input
Number of analogue inputs	4	
Max. power supply per module [A]	0.7	
Fuse protection	Internal electronic fuse	
Current consumption from 24 V sensor supply (quiescent current) [mA]	Typically 50	
Current consumption from 24 V sensor supply (at full load) [A]	Max. 0.7	
Nominal operating voltage, load voltage [V DC]	24 ±2%	
Nominal operating voltage [V DC]	24	
Operating voltage range [V DC]	18 ... 30	
Signal range (parameterisable for each channel by means of DIL switch or software)	1 ... 5 V 0 ... 10 V -5 ... +5 V -10 ... +10 V	0 ... 20 mA 4 ... 20 mA -20 ... +20 mA
Operational error limit [%]	±0.3	±0.3
Basic error limit (at 25 °C) [%]	±0.2	±0.2
Repetition accuracy (at 25 °C) [%]	0.1	0.1
Input resistance	100 kΩ	≤ 100 Ω
Max. permissible input voltage [V DC]	-30 ... +30	-
Max. permissible input current [mA]	-	Internally limited to 60
Conversion time per channel [µs]	Typically 150	
Cycle time (module) [ms]	≤ 0.5	
Data format	15 bits + prefix Scalable to 15 bits	
Cable length [m]	Max. 30 (screened)

# Terminal CPX-P

Technical data – Output module, digital

## Function

Digital outputs control actuators such as individual valves, hydraulic valves, heating controllers and many more. Separate circuits are created using an additional power supply. Parallel connection of the outputs of a module enables consuming devices to be controlled with up to 4 A.

## Applications

- Output module for 24 V DC supply voltage
- PNP logic
- Module features can be parameterised
- The output module receives the voltage supply for the electronics and the outputs from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection in each channel

General technical data			
Type		CPX-4DA	CPX-8DA
Number of outputs		4	8
Max. power supply	Per module	[A]	4
	Per channel	[A]	1 (24 W lamp load, 4 channels can be connected in parallel)
Fuse protection (short circuit)		Internal electronic fuse for each channel	
Module current consumption (voltage supply for electronics)		[mA]	Typically 16
Operating voltage	Nominal value	[V DC]	24
	Permissible range	[V DC]	18 ... 30
Electrical isolation	Channel – channel	No	
	Channel – internal bus	Yes, using an intermediate supply	
Output characteristic curve		To IEC 1131-2	
Switching logic		Positive logic (PNP)

# Terminal CPX-P

Technical data – Analogue module for outputs

## Function

Analogue modules control devices with a standard analogue interface such as proportional valves, etc. The analogue module supports various connection concepts with different numbers of sockets or terminals as appropriate to the connection block selected.

## Applications

- Analogue module for 0 ... 10 V, 0 ... 20 mA or 4 ... 20 mA
- Supports connection blocks with M12, Sub-D and terminal connection
- Analogue module features can be parameterised
- Different data formats available
- Operation with and without galvanic isolation possible
- The analogue module receives the voltage supply for the electronics and the actuators from the interlinking block
- Analogue module protection and diagnostics through integrated electronic fuse protection

General technical data				
Type		CPX-2AA-U-I		
		Voltage output	Current output	
Number of analogue outputs		2		
Max. actuator supply per module	[A]	2.8		
Fuse protection		Internal electronic fuse for actuator supply		
Current consumption from 24 V sensor supply (at full load)	[mA]	Max. 150		
Current consumption from 24 V actuator supply (at full load)	[A]	4 ... 10		
Supply voltage of actuators	[V DC]	24 ±25%		
Signal range (parameterisable for each channel by means of DIL switch or software)		0 ... 10 V DC	0 ... 20 mA 4 ... 2 mA	
Resolution	[bit]	12		
Number of units		4,096		
Absolute accuracy	[%]	±0.6		
Linearity errors (no software scaling)	[%]	±0.1		
Repetition accuracy (at 25 °C)	[%]	0.05		
Encoder selection	Load resistance for ohmic load	[kΩ]	Min. 1	Max. 0.5
	Load resistance for capacitive load	[μF]	Max. 1	–
	Load resistance for inductive load	[mH]	–	Max. 1
	Short circuit protection for analogue output		Yes	–
	Short circuit current of analogue output	[mA]	Approx. 20	–
	Open circuit voltage	[V DC]	–	18
	Destruction limit against externally applied voltage	[V DC]	15	
	Actuator connection		2 wires	
Cycle time (module)	[ms]	≤ 4		

# Terminal CPX-P

Technical data – Analogue module for outputs

General technical data				
Type		CPX-2AA-U-I		
		Voltage output		Current output
Response time	For ohmic load	[ms]	0.1	0.1
	For capacitive load	[ms]	0.7	–
	For inductive load	[ms]	–	0.5
Data format		15 bits + prefix, linear scaling 12 bits right-justified 12 bits left-justified, S7 compatible 12 bits left-justified, S5 compatible		
Cable length		[m]	Max. 30 (screened)	
LED displays	Group diagnostics		1	
	Channel diagnostics		Yes, by means of flashing frequency of group diagnostics	
Diagnostics		<ul style="list-style-type: none"> <li>• Short circuit/overload, actuator supply</li> <li>• Parameterisation error</li> <li>• Value falling below nominal range/full-scale value</li> <li>• Value exceeding nominal range/full-scale value</li> <li>• Wire break</li> </ul>		
Parameterisation		<ul style="list-style-type: none"> <li>• Short circuit monitoring, actuator supply</li> <li>• Short circuit monitoring, analogue output</li> <li>• Behaviour after short circuit, actuator supply</li> <li>• Data format</li> <li>• Lower limit value/full-scale value</li> <li>• Upper limit value/full-scale value</li> <li>• Monitoring of value falling below nominal range/full-scale value</li> <li>• Monitoring of value exceeding nominal range/full-scale value</li> <li>• Wire break monitoring</li> <li>• Signal range</li> </ul>		
Protection class to EN 60529		Depending on connection block		
Temperature range	Operation		[°C]	–5 ... +50
	Storage/transport		[°C]	–20 ... +70
Materials		PA-reinforced PC		
Grid dimension		[mm]	50	
Dimensions (incl. interlinking block and connection block) W x L x H		[mm]	50 x 107 x 50	
Product weight		[g]	38

# Terminal CPX-P

Technical data – Interlinking block with system supply

### Function

Interlinking blocks ensure the electrical supply of all other CPX-P modules. They have contact rails, from which the other CPX-P components on the interlinking modules are supplied with current.

Internal division of the power supply makes it possible to switch off specific areas of the sensors and actuators individually.

### Applications

- 24 V DC supply voltage for electronics of the CPX-P terminal
- 24 V DC supply voltage for inputs
- 24 V DC supply voltage for valves
- 24 V DC supply voltage for outputs

General technical data

Technical data – Interlinking block

### Function

Interlinking blocks ensure the electrical supply of all other CPX-P modules. They have contact rails, from which the other CPX-P components on the interlinking modules are supplied with current.

Internal division of the power supply makes it possible to switch off specific areas of the sensors and actuators individually.

### Applications

- All voltages are fed through to the next module by means of interlinking blocks.
- The connected electronics module for inputs/outputs or bus node taps off the required voltage.

# Terminal CPX-P

Technical data – Pneumatic interface VMPA-FB

### Function

The pneumatic interface VMPA-FB establishes the electromechanical connection between the CPX-P terminal and the valve terminal MPA-S. The signals from the bus node are forwarded to the control electronics in the electrical modules of the valve terminal MPA-S via the integrated CPX-P bus. The bus signal for activation of the solenoid coils is converted in the electronics module for max. 8 coils. From a technical point of view, the individual MPA pneumatic modules each represent a separate electric module with digital outputs. Valves, which are galvanically isolated, can be supplied with power via the interlinking block CPX-GE-EV-V.

### Applications

- Interface to the valve terminal MPA-S
- Max. 128 solenoid coils
- Features of the electronics module of the valve terminal MPA-S can be parameterised, for example status of the solenoid coils in the event of fieldbus communication being interrupted (fail-safe), individual channel diagnostics can be activated, condition monitoring can be activated individually for each valve
- The pneumatic interface receives the voltage for the electronics and the supply voltage for the valves from the left-hand interlinking block and feeds them through to the electronics modules of the valve terminal MPA-S
- Electronics modules of the valve terminal MPA-S:
  - Undervoltage of valves
  - Short circuit of valves
  - Open load of valves
  - Counter preset reached in condition monitoring

	Cover cap for sealing unused connections (10 pieces)	For M8 connections	<b>177672</b>	<b>ISK-M8</b>
		For M12 connections	<b>165592</b>	<b>ISK-M12</b>
	Coding element (96 pieces of each)	For NECU-L3G8	<b>565713</b>	<b>CPX-P-KDS-AB-2XKL</b>
	Insulating plate for safe separation of intrinsically safe and non-intrinsically safe areas of the CPX terminal		<b>565708</b>	<b>CPX-P-AB-IP</b>
<b>Inscription labels</b>				
	Inscription labels 6x10 mm, 64 pieces, in frames		<b>18576</b>	<b>IBS-6x10</b>
	Inscription label holder for connection block		<b>536593</b>	<b>CPX-ST-1</b>
<b>Software</b>				
	Programming software	German	<b>537927</b>	<b>P.SW-FST4-CD-DE</b>
		English	<b>537928</b>	<b>P.SW-FST4-CD-EN</b>

1) Component preferred for operation in intrinsically safe circuits.
