

Standard cylinders DNC, ISO 15552

Standard cylinders DNC, ISO 15552

Key features

FESTO

At a glance

DIN

- Standards-based cylinders to ISO 15552 (corresponds to the withdrawn standards ISO 6431, DIN ISO 6431, VDMA 24 562, NF E 49 003.1 and UNI 10290)
- The modern design and construction save up to 11% on fitting space compared to ordinary standard cylinders, thus permitting a considerably more compact system design
- An extensive range of accessories makes it possible to install the cylinder virtually anywhere
- The widest range of variants on the market provides the right DNC cylinder for every application

Cylinder with clamping units

DNC-KP

- Piston rod can be held or clamped in any position
- Piston rod can be held in position for long periods even with alternating loads, fluctuating operating pressure or leaks in the system

DNCKE

- Suitable for use in safety-related control systems in compliance with EN 954-1, EN 1050, EN 292 and EN 983
- Fail-safe
- Piston rod can be clamped in any position

Cylinder with end-position locking

DNC- ... -EL

- Mechanical locking when the end position is reached
- Lock is only automatically released when pressure is supplied to the cylinder
- End-position locking at one or both ends

Cylinder/valve combination

DNC-V1 ... V6

- The cylinder/valve combination is assembled and fitted with tubing ready for connection
- Particularly suitable for decentralised use in larger systems

Tandem cylinder

DNCT

- Connection of 2 cylinders with the same piston diameter and stroke in series
- Double the thrust and return force in comparison to a standard cylinder

Longer service life thanks to the bellows kit DADB

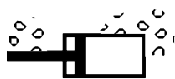

The bellows kit is a leak-free system. To prevent unwanted media being drawn in, the supply and exhaust air must be ducted via a pressure compensation hole in the connection part 1.

The kit protects the piston rod, seal and bearings from a wide range of media, for example:

- dust,
- chips,
- oil,
- grease,
- fuel.

Standard cylinders DNC, ISO 15552

Key features

| Variants from the modular product system | | |
|---|---|--|
| Symbol | Key features | Description |
|  | S2 Through piston rod | For working at both ends with the same force in the forward and return stroke, for attaching external stops |
|  | S6 Heat-resistant seals | Temperature resistance up to max. 120 °C |
|  | S10 Constant motion (slow speed) at low piston speeds | Suitable for slow stroke movements at a constant, stick-slip-free speed over the full stroke of the cylinder. Seal contains silicone grease (not free of paint-wetting impairment substances) |
|  | S11 Low friction | Special seals considerably reduce system wear. This means a considerably lower response pressure. Seal contains silicone grease (not free of paint-wetting impairment substances) |
|  | S20 Through, hollow piston rod | For supplying vacuum, small parts, media, etc. |
|  | K2 Extended male piston rod thread | – |
|  | K3 Female piston rod thread | – |
|  | K5 Special piston rod thread | Metric standard thread to ISO |
|  | K7 Piston rod with external hexagon | Special spanner flats |
|  | K8 Extended piston rod | – |
|  | K10 Smooth anodised aluminium piston rod | Ideal for use in welding environments: – Protection against welding spatter – Small working loads – Harder surface compared to steel – Long service life |
|  | KP With clamping unit | Integrated clamping unit on the piston rod |
|  | EL With end-position locking | Positive locking in the end position as a drop guard. If there is a drop in pressure, the piston rod is secured in its end position to prevent it from dropping |
|  | Q Square piston rod | Protection against rotation. For correctly oriented feeding |
|  | R3 High corrosion protection | All external cylinder surfaces comply with corrosion resistance class 3 to Festo standard 940 070. The piston rod is made from corrosion and acid-resistant steel |
|  | R8 Dust protection (wiper seal) | The cylinder is equipped with a hard-chrome plated piston rod and a rigid wiper seal, which protects against dry, dusty media |

| ATEX | Specified types → www.festo.com | | | | | | |

1) Note operating range of proximity sensors

2) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation may occur. External visible parts with primarily decorative requirements for the surface and which are in direct contact with the ambient atmosphere typical for industrial applications.

Corrosion resistance class CRC 3 to Festo standard FN 940070

High corrosion stress. Outdoor exposure under moderate corrosive conditions. External visible parts with primarily functional requirements for the surface and which are in direct contact with a normal industrial environment.

| Force [N] and impact energy [J] | | | | | | | |
|---|--------|-----|------|------|------|------|------|
| Piston Ø | 32 | 40 | 50 | 63 | 80 | 100 | 125 |
| Theoretical force at 6 bar, advancing | 483 | 754 | 1178 | 1870 | 3016 | 4712 | 7363 |
| | S2/S20 | 415 | 633 | 990 | 1682 | 2721 | 4418 |
| Theoretical force at 6 bar, retracting | 415 | 633 | 990 | 1682 | 2721 | 4418 | 6881 |
| | S2/S20 | 415 | 633 | 990 | 1682 | 2721 | 4418 |
| Max. impact energy at the end positions ¹⁾ | 0.1 | 0.2 | 0.2 | 0.5 | 0.9 | 1.2 | 5 |

1) The permissible impact energy is reduced by approx. 10% for variants K10 and S20

Permissible impact velocity:

$$v_{\text{perm.}} = \sqrt{\frac{2 \times E_{\text{perm.}}}{m_{\text{dead}} + m_{\text{load}}}}$$

Maximum permissible load:

$$m_{\text{load}} = \frac{2 \times E_{\text{perm.}}}{v^2} - m_{\text{dead}}$$

$v_{\text{perm.}}$ Permissible impact velocity
 $E_{\text{perm.}}$ Max. impact energy
 $m_{\text{Intrinsic}}$ Moving load (drive)
 m_{Load} Moving effective load

 Note
 This data represents the maximum values that can be achieved. The maximum permissible impact energy must be observed.

Standard cylinders DNC, ISO 15552

Technical data

Lateral force F_q as a function of stroke length l

Basic version

- Ø 32
- - - Ø 40
- — — Ø 50/63
- · · · · Ø 80/100
- - - - - Ø 125

Standard cylinders DNC, ISO 15552

Technical data

FESTO

Lateral force F_q as a function of stroke length l and lever arm s

Q – Square piston rod

Ø 32

Max. torque = 800 Nmm / Max. stroke = 300 mm

Ø 40

Max. torque = 1100 Nmm / Max. stroke = 400 mm

Ø 50/63

Max. torque = 1500 Nmm / Max. stroke = 500 mm

Ø 80/100

Max. torque = 3000 Nmm / Max. stroke = 600 mm

Examples for piston Ø 32 mm

Example 1:

Stroke length l = 150 mm

Result: permissible

Lateral force F_q = 9.5 N

Lever arm s = 84 mm

Example 2:

Lateral force F_q = 40 N

Result: permissible

Stroke length l = 28 mm

Lever arm s = 20 mm

Example 3:

Stroke length l = 150 mm

Lever arm s = 100 mm

$F_q = \frac{\text{Max. torque } 800 \text{ Nmm}}{\text{Lever arm } 100 \text{ mm}}$

= 8 N

Result: permissible

$F_q = 8 \text{ N} < F_{q\text{max.}} = 9.5 \text{ N}$

Q – Square piston rod

S2 – Through piston rod

+ = plus stroke length
++ = plus 2x stroke length

S20 – Through hollow piston rod

+ = plus stroke length
++ = plus 2x stroke length

K2 – Extended male piston rod thread

K3 – Female piston rod thread

K5 – Special piston rod thread

K7 – Piston rod with external hexagon

K8 – Extended piston rod

Note

In combination with variant S2/S20, the piston rod is extended at one

end. In combination with variant Q, the square piston rod is extended.

Note: This product conforms to ISO 1179-1 and to ISO 228-1

| Operating and environmental conditions | |
|--|--|
| Operating medium | Compressed air in accordance with ISO 8573-1:2010 [7:4:4] |
| Note on operating/pilot medium | Operation with lubricated medium possible (in which case lubricated operation will always be required) |
| Operating pressure [bar] | 1.5 ... 10 |
| Min. release pressure [bar] | 3 |
| Ambient temperature ¹⁾ [°C] | -10 ... +80 |
| Corrosion resistance class CRC ²⁾ | 2 |
| Certification | Germanischer Lloyd |

1) Note operating range of proximity sensors

2) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation may occur. External visible parts with primarily decorative requirements for the surface and which are in direct contact with the ambient atmosphere typical for industrial applications.

Standard cylinders DNC-KP, standard hole pattern, with clamping unit

Technical data

| Impact energy [J] | | | | | | | |
|---|-----|-----|-----|-----|-----|-----|-----|
| Piston Ø | 32 | 40 | 50 | 63 | 80 | 100 | 125 |
| Max. impact energy at the end positions | 0.1 | 0.2 | 0.2 | 0.5 | 0.9 | 1.2 | 5 |

Permissible impact velocity:
$$v_{perm.} = \sqrt{\frac{2 \times E_{perm.}}{m_{dead} + m_{load}}}$$

$v_{perm.}$ Permissible impact velocity
 $E_{perm.}$ Max. impact energy
 $m_{intrinsic}$ Moving load (drive)
 m_{load} Moving effective load

 - Note
 This data represents the maximum values that can be achieved. The maximum permissible impact energy must be observed.

Maximum permissible load:
$$m_{load} = \frac{2 \times E_{perm.}}{v^2} - m_{dead}$$

| Forces [N] | | | | | | | | |
|--|----|-----|------|------|------|------|------|------|
| Piston Ø | 32 | 40 | 50 | 63 | 80 | 100 | 125 | |
| Theoretical force at 6 bar, advancing | | 483 | 754 | 1178 | 1870 | 3016 | 4712 | 7363 |
| | S2 | 415 | 633 | 990 | 1682 | 2721 | 4418 | 6881 |
| Theoretical force at 6 bar, retracting | | 415 | 633 | 990 | 1682 | 2721 | 4418 | 6881 |
| | S2 | 415 | 633 | 990 | 1682 | 2721 | 4418 | 6881 |
| Static holding force | | 600 | 1000 | 1400 | 2000 | 5000 | 5000 | 7500 |

 - Note
 The specified holding force refers to a static load. If this value is exceeded, slippage may occur. Dynamic forces occurring during operation must not exceed the static holding force. The clamping unit is not backlash-free in the clamped condition if varying loads are applied to the piston rod.

Activation:
 The clamping unit may only be released if the forces at the piston have reached equilibrium. Otherwise, there is a risk of accidents due to

sudden movement of the piston rod. Blocking off the air supply at both ends (e.g. with a 5/3-way valve) does not provide any safety.

Standard cylinders DNC-KP, standard hole pattern, with clamping unit

Technical data

Dimensions – Variants

Download CAD data → www.festo.com

Q – Square piston rod

- - Note

Clamping unit and variant Q only in combination with S2.

S2 – Through piston rod

+ = plus stroke length
++ = plus 2x stroke length

- - Note

The thread types at both piston rod ends are identical.

In combination with variant Q, the left-hand piston rod is round,

the right-hand piston rod square. The clamping unit is mounted on

the left-hand, round piston rod.

K2 – Extended male piston rod thread

K3 – Female piston rod thread

K5 – Special piston rod thread

K7 – Piston rod with external hexagon

K8 – Extended piston rod

- - Note

In combination with variant S2, the piston rod is extended at one end. The clamping unit is mounted on the

side of the piston rod that is not extended. If variant Q is also required,

the extension will only be added to the square piston rod.

| Position sensing | | Via proximity sensor | | | | | |
| Type of mounting | | Via female thread | | | | | |
| | | Via accessories | | | | | |
| Mounting position | | Any | | | | | |

 Note: This product conforms to ISO 1179-1 and to ISO 228-1

 Note

- End-position locking should only be operated in conjunction with double-acting cylinders with exhaust air flow control in order to ensure that the lock is always completely released prior to starting the drive movement.
- No screws with a head or similar may be used in place of end-position locking, as there is a risk that the function will be impaired if they are screwed in too deeply.
- The exhaust hole must not be closed.
- Locking can be performed from any stroke position once the drive is brought mechanically into its end position.
- End-position locking has been designed to prevent the load dropping in case of pressure failure.
- An excessive end-position cushioning setting (more than 50% closed) can result in the locking bolt not engaging reliably, resulting in premature wear.

Standard cylinders DNC-EL, standard hole pattern, with end-position locking

Technical data

| Operating and environmental conditions | | | | | | |
|--|--|----|------------|----|----|-----|
| Piston Ø | 32 | 40 | 50 | 63 | 80 | 100 |
| Operating medium | Compressed air in accordance with ISO 8573-1:2010 [7:4:4] | | | | | |
| Note on operating/pilot medium | Operation with lubricated medium possible (in which case lubricated operation will always be required) | | | | | |
| Operating pressure [bar] | 2.5 ... 12 | | 1.5 ... 12 | | | |
| Ambient temperature ¹⁾ [°C] | -20 ... +80 | | | | | |
| Corrosion resistance class CRC ²⁾ | 2 | | | | | |
| Certification | Germanischer Lloyd | | | | | |

1) Note operating range of proximity sensors

2) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation may occur. External visible parts with primarily decorative requirements for the surface and which are in direct contact with the ambient atmosphere typical for industrial applications.

| Impact energy [J] | | | | | | |
|---|-----|-----|-----|-----|-----|-----|
| Piston Ø | 32 | 40 | 50 | 63 | 80 | 100 |
| Max. impact energy at the end positions | 0.1 | 0.2 | 0.2 | 0.5 | 0.9 | 1.2 |

Permissible impact velocity:

$$v_{perm.} = \sqrt{\frac{2 \times E_{perm.}}{m_{dead} + m_{load}}}$$

$v_{perm.}$ Permissible impact velocity

$E_{perm.}$ Max. impact energy

$m_{intrinsic}$ Moving load (drive)

m_{load} Moving effective load

 Note

This data represents the maximum values that can be achieved. The maximum permissible impact energy must be observed.

Maximum permissible load:

$$m_{load} = \frac{2 \times E_{perm.}}{v^2} - m_{dead}$$

| Forces [N] | | | | | | |
|--|-----|-----|------|------|------|------|
| Piston Ø | 32 | 40 | 50 | 63 | 80 | 100 |
| Theoretical force at 6 bar, advancing | 483 | 754 | 1178 | 1870 | 3016 | 4712 |
| Theoretical force at 6 bar, retracting | 415 | 633 | 990 | 1682 | 2721 | 4418 |
| Static holding force | 500 | | 2000 | | 5000 | |

Sizing example

 Note

When sizing pneumatic cylinders it is recommended as a basic principle that only 50% of the indicated theoretical forces (see above) be used.

Given:

Installation position = Vertical

Workpiece load = 44 kg

$$F = m \times g = 44 \text{ kg} \times 9.81 \text{ m/s}^2 = 431.6 \text{ N}$$

To be calculated:

Suitable piston Ø

Example with 32 mm piston Ø:

Theoretical force at 6 bar, advancing = 483 N

50% of the theoretical force = 241.5 N

Static holding force with 32 mm piston Ø = 500 N

The static holding force of end-position locking is within the permissible range (max. 500 N) with a workpiece load of 44 kg (431.6 N), however the cylinder would be at 89% capacity.

Result:

A cylinder with a piston Ø of 40 mm is therefore recommended for this application.

Standard cylinders DNC-EL, standard hole pattern, with end-position locking

Technical data

Max. lateral force F_q as a function of stroke length l

| Weight [g] | | | | | | |

 Note
The maximum overall stroke length must not be exceeded when combining cylinders and multi-position kits.

Connecting two cylinders with identical piston diameter as a 3 or 4-position cylinder

A 3 or 4-position cylinder consists of two separate cylinders whose piston rods advance in opposing directions.

This means that depending on actuation and stroke division, this type of cylinder can assume up to four

positions. In each case the cylinder is driven precisely against a stop. Note that when one end of the piston rod is

fixed, the cylinder barrel executes the movement. The cylinder's connections must be flexible.

To achieve 3 positions

Two cylinders with identical stroke length must be connected together.

To achieve 4 positions

Two cylinders with different stroke lengths must be connected together.

Standard cylinders DNC, ISO 15552

Accessories

Foot mounting HNC/CRHNC

Material:

HNC: Galvanised steel

CRHNC: High-alloy steel

1) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation may occur. External visible parts with primarily decorative requirements for the surface and which are in direct contact with the ambient atmosphere typical for industrial applications.

Corrosion resistance class CRC 4 to Festo standard FN 940070

Particularly high corrosion stress. Outdoor exposure under extreme corrosive conditions. Parts exposed to aggressive media, for instance in the chemical or food industries. These applications may need to be supported by special tests (→ also FN 940082) using appropriate media.

1) Corrosion resistance class CRC 4 to Festo standard FN 940070
Particularly high corrosion stress. Outdoor exposure under extreme corrosive conditions. Parts exposed to aggressive media, for instance in the chemical or food industries. These applications may need to be supported by special tests (→ also FN 940082) using appropriate media.

Standard cylinders DNC, ISO 15552

Accessories

Travel velocity v as a function of tubing length l

The bellows kit is a leak-free system. To prevent unwanted media being drawn in, the supply and exhaust air must be ducted via a pressure compensation hole in the connection

part **1**. The pressure generated in the bellows kit by the positioning motion is primarily defined by travel velocity

and tubing length. The recommended tubing length based on the travel velocity of the drive can be read from the graph.

Advancing

— Ø 32/50/63 - - - - - Ø 80/100
 - - - - - Ø 40

Returning

— Ø 32 - - - - - Ø 50/63
 - - - - - Ø 40 - - - - - Ø 80/100

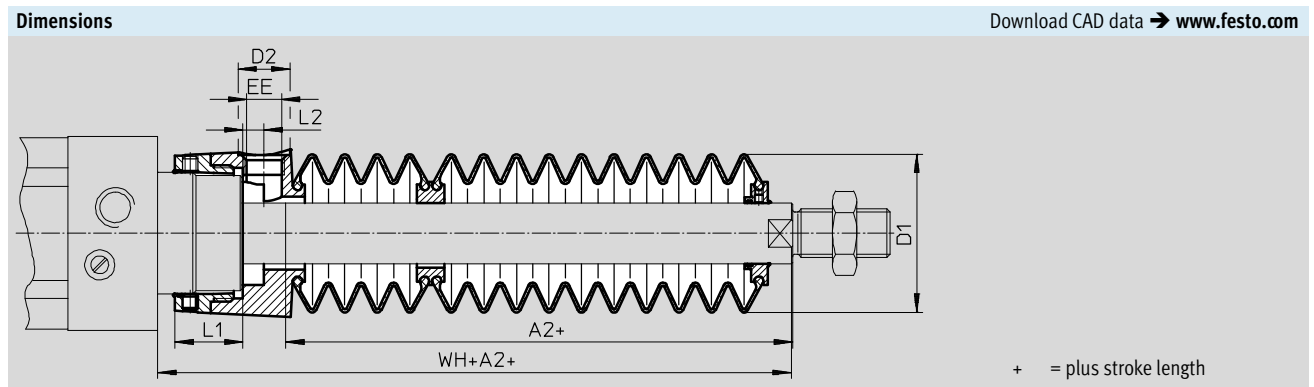

Note
 The push-in fittings opposite must be used for the pressure compensation hole.
 Silencers can also be used as an alternative. This reduces the travel velocity slightly.

1) The dimension corresponds to the K8 value (extended piston rod) of the drive

Standard cylinders DNC, ISO 15552

Accessories

Ordering data – Bellows kit

An extended piston rod (order code K8) is absolutely necessary when using a bellows kit.
 → Ordering data – Modular products.

The necessary dimension for K8 as a function of piston diameter and cylinder stroke as well as the associated bellows kit is indicated in the following table:

Order example:

Selected standard cylinder:

DNC-32-320-PPV-A-...

Dimension for the corresponding K8 value (see table):
 112 mm

Complete type designation for the standard cylinder:

DNC-32-320-PPV-A-...-112K8

Associated bellows kit:

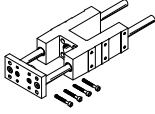

DADB-V6-32-S301-350
