Parallel grippers HGPT-B, heavy-duty

Key features

Advantages compared with the parallel gripper HGPT

- **Space-optimised:**
Choice of shorter housing without gripping force retention or longer housing with gripping force retention
- **Increased gripping force/high-force variant:**
Gripping force increased by 30% by means of oval piston.
High-force variant also available: half the stroke, twice the force
- **Reduced weight:**
Systematic use of lighter and higher performance materials
- **4 sensor slots:**
Proximity sensors no longer project past the bottom of the housing.
Up to four positions can be sensed with the proximity sensors

At a glance

General information

Sturdy and precise kinematic system for maximum torque absorption and long service life.
The force generated by the linear motion is translated into the gripper jaw movement via a wedge mechanism

with guided motion sequence. This also guarantees synchronous movement of the gripper jaws. The virtually backlash-free plain-bearing guide is realised using ground-in gripper jaws.

Flexible range of applications

A wide range of uses:

- Can be used as either a double-acting or single-acting gripper
- Compression spring for supplementary or retaining gripping forces
- Suitable for external and internal gripping
- Centring either via centring pins or centring sleeves

The technology in detail

Gripper closed

Gripper open

- 1 Gripper jaw
- 2 Wedge with restricted guidance
- 3 Piston with magnet

Additional connections

For sealing air

Compressed air flows past the gripper jaw when sealing air (max. 0.5 bar) is connected. This prevents, for example, dust particles from entering the gripper jaw guides.

For lubrication

The connections can also be used for relubricating the guide.

Position sensing/force control

With position transmitter SMAT-8M

Analogue positional feedback possible

- Analogue output 0 ... 10 V

With proportional pressure regulator VPPM

Infinite adjustment of the gripping force possible

- Setpoint input
 - 0 ... 10 V
 - 4 ... 20 mA

With proximity sensor SMT-8G/-10G

Multiple positions can be sensed:

- Open
- Closed
- Workpiece gripped

Technical data

Gripping force F_H per gripper jaw at 6 bar as a function of lever arm x and eccentricity a and b

The following formula must be used to calculate the lever arm x with eccentric gripping:

$$x = \sqrt{a^2 + b^2}$$

The gripping force F_H can then be read from the graphs (→ from 11) using the calculated value x .

Calculation example

Given:

Distance $a = 45$ mm

Distance $b = 40$ mm

To be calculated:

The gripping force at 6 bar, with an HGPT-25, used as an external gripper

Procedure:

Calculate the lever arm x

$$x = \sqrt{45^2 + 40^2}$$

$x = 60$ mm

The graph (→ 11) gives a value of $F_H = 89$ N for the gripping force.

Determination of the actual gripping forces F_{Gr} for HGPT-...-G1 and HGPT-...-G2 as a function of the application

The parallel grippers with integrated spring type HGPT-...-G1 (opening gripping force retention) and HGPT-...-G2 (closing gripping force retention) can be used as:

- single-acting grippers

- grippers with supplementary gripping force and
- grippers with gripping force retention depending on requirements.

In order to calculate available gripping forces F_{Gr} (per gripper jaw), the gripping force (F_H) and spring force (F_{Ftotal}) must be combined accordingly.

Application

Single-acting

- Gripping with spring force:
 $F_{Gr} = F_{Ftotal}$
- Gripping with pressure force:
 $F_{Gr} = F_H - F_{Ftotal}$

Supplementary gripping force

- Gripping with pressure and spring force:
 $F_{Gr} = F_H + F_{Ftotal}$

Gripping force retention

- Gripping with spring force:
 $F_{Gr} = F_{Ftotal}$

| Position transmitter | | | |
|--|---|--|--|
| Mode of operation: | Measuring range: | Projection: | |
| The position transmitter continuously senses the position of the piston. It has an analogue output with an output signal in proportion to the piston position. | Measurement is possible across the entire stroke with the sizes 40 and 50. A stroke of 13 mm (with the high-force variant 6.5 mm) can be measured with the sizes 63 and 80. | Two position transmitters are required for sensing longer strokes. | The position transmitter projects past the housing with the sizes 40 and 50. |
