

Handling modules HSW

Handling modules HSW

Key features at a glance

Range of applications

The handling module is a new generation of function modules for the automatic transfer, feed and removal of small parts in extremely confined spaces.

This is achieved by means of a guided swivel and linear motion sequence. A backlash-free guide with recirculating

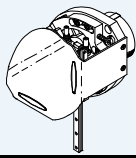

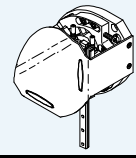

ball bearing elements ensures high precision and good rigidity. The combination of a semi-rotary drive and a slotted guide system produces a compact unit for a complete pick and place cycle at an operating angle of 90°.

Special features

- Compact design
- Extremely short cycle times
- Cost optimised
- Simple commissioning
- For effective loads up to 1.6 kg
- Angle and stroke adjustment
- Wait positions possible
- No planning costs

Product range overview – Two drive variants are available

| | Pneumatic: HSW-...-AP, with swivel module DSM | Without drive: HSW-...-AS, with drive shaft |
|---|---|---|
| |  |  |
| Advantages | | |
| | <ul style="list-style-type: none"> • Fast • Cost effective • Ready to install • No system planning required • Simple commissioning | <ul style="list-style-type: none"> • Compact • Universal applications • Variable drive interface • On request: Drive options in combination with servo motors EMMS-AS |
| Technical data | | |
| Max. linear stroke at 90° swivel angle | [mm] 90 ... 175 | |
| Working stroke | [mm] 9 ... 35 | |
| Min. cycle time | [s] 0.6 ... 1.0 | Dependent on drive |
| Effective load | [g] 0 ... 1,600 | |
| Repetition accuracy at end positions | [mm] ±0.02 | |
| Wait positions | Max. 2 | Dependent on drive |
| Function of wait position | Pushing via actuating cylinder (→ 11) | Dependent on drive |
| Repetition accuracy at wait positions | [mm] < 1 | Dependent on drive |
| Technical data | → 7 | → 18 |

Handling modules HSW

Application examples

HSW...-AP, pneumatic

Rotary indexing table

- Fast feed and removal at a linear transfer unit or rotary indexing table, for example

Machine equipment

- Loading and unloading of small parts on a grinding or injection moulding machine, for example

Planar surface gantry

- Fast equipping of pallets

HSW...-AS, without drive

Rotary indexing table, linear transfer

- Fast and flexible 90° pick and place unit with servo motor EMMS-AS
- Electrical variant using third-party motor

Handling modules HSW

Key features at a glance

Design of HSW-...-AP – pneumatic variant with swivel module DSM

- 1 Slotted guide plate
- 2 Adjustable stop
- 3 Sensor rail
- 4 Swivel module DSM
- 5 Pressure piece
- 6 Guide with recirculating ball bearing element

Design of HSW-...-AS – variant without drive (rear side)

- 1 Base plate
- 2 Shaft with Woodruff key
- 3 Slotted guide plate
- 4 Ball bearings

Cable binder holder and protective conduit

- 1 Holder and protective conduit facilitate the secure routing of tubing and cables.

Stroke adjustment

- 2 The adjustable slotted guide plate permits precise adjustment of the swivel angle.

Adjustment of proximity sensors

- 3 The sensor rail facilitates readily accessible and easy adjustment of the proximity sensors.

Stop element and pressure piece

- 4+5 The stop element and pressure piece guarantee freedom from backlash and precision in the end positions and in the effective linear stroke.

Handling modules HSW

Peripherals overview

| Accessories | | Brief description | → Page/Internet |
|-------------|--|--|-----------------|
| 1 | Handling module HSW | Standard module without accessories | 7 |
| 2 | Adapter kit HAPG-...-B | Interface for grippers, semi-rotary drive, etc. | 20 |
| 3 | Swivel module DSM | Pneumatic drive, adapted to each size | dsm |
| 4 | Installation kit MKRP | Conduit to protect electrical cables and tubing | 21 |
| 5 | Wait position module BAW-HSW | With pneumatic drive: Pushes the swivel arm from the operating area | 21 |
| 6 | Cover kit BSD-HSW | To protect against accidental contact | 21 |
| 7 | Adapter kit | Interface between HSW and gripper or semi-rotary drive | gripper drqd |
| 8 | Gripper | Parallel/Three-point/Radial/Angle gripper, appropriate gripper for every application | gripper |
| 9 | Semi-rotary drive DRQD | Semi-rotary drive for transferring parts | drqd |
| 10 | Suction cups | Appropriate suction cup for every application | suction cup |
| 11 | Proximity sensor SME-/SMT-8 | Sensing option for end positions | 22 |
| 12 | Non-return and flow control valve GRLA | For setting the speed of pneumatic drives | grla |
| 13 | Shock absorber DYSW/YSRW | <ul style="list-style-type: none"> With path-controlled flow control function Slowly increasing cushioning force curve | 22 |

Handling modules HSW, pneumatic

Technical data

| Weight [g] | | | |
|------------------|-------|-------|-------|
| Size | 10 | 12 | 16 |
| HSW-...-AP | 1,300 | 3,000 | 5,100 |
| HSW-...-AP-SD | 1,400 | 3,200 | 5,400 |
| HSW-...-AP-AW | 1,370 | 3,060 | 5,500 |
| HSW-...-AP-SD-AW | 1,470 | 3,400 | 5,800 |

Repetition accuracy [mm]

To ensure low-vibration operation, the effective load should be mounted as close as possible to the guide rail of the handling module.
Repetition accuracy is guaranteed by

mounting the effective load (adapter plate, semi-rotary drive and/or gripper, gripper finger, workpiece) within the mounting surface of the adapter kit HAPG/HAPG-...-B.

| Size | 10 | 12 | 16 |
|--------------------------------------|-------|----|----|
| Repetition accuracy at end positions | ±0.02 | | |

Travel times t as a function of effective load m with observance of repetition accuracy

The travel time t is the time taken for the handling module to move from one end position to the other and back again.

The effective load m is the load attached to the guide rail (e.g. adapter, gripper, semi-rotary drive and workpiece).

- HSW-10-AP
- - - HSW-12-AP
- · - HSW-16-AP

Note
Higher speeds are possible at a constant load with restriction of the repetition accuracy.

Cycle times [s]

The cycle time t_t comprises the travel time t and the dwell time t_e at the end positions.

$t_t = \text{travel time } t + \text{dwell time } t_e$
The value must not fall below the minimum cycle time.

| Size | 10 | 12 | 16 |
|---|-----|-----|-----|
| Min. cycle time | 0.6 | 0.8 | 1.0 |
| Min. cycle time with wait position module | 0.7 | 1.1 | 1.2 |

Example for HSW-10-AP

Step 1:
The following values are assumed:
Effective load $m = 0.2 \text{ kg}$
Dwell time $t_e = 2 \times 350 \text{ ms}$
(350 ms per end position)

Step 2:
The travel time can be determined from the graph:
 $t = 800 \text{ ms}$

Step 3:
This gives us a cycle time:
 $t_t = 800 \text{ ms} + 700 \text{ ms}$
 $= 1,500 \text{ ms}$

Handling modules HSW, pneumatic

Technical data

Permissible static/dynamic characteristic load values

Linear guide and ball bearing

-  - Note

The torques apply to the centre of the vertical guide.

Combined load

The following torque equation must be satisfied with combined load:

$$\frac{M_x}{M_{xperm.}} + \frac{M_y}{M_{yperm.}} + \frac{M_z}{M_{zperm.}} \leq 1$$

Dynamic characteristic load values

| Size | 10 | 12 | 16 |
|---|-----|-----|-----|
| Max. torques [Nm] $M_{xperm.}, M_{yperm.}, M_{zperm.}$ | 0.6 | 1.5 | 2.5 |

Handling modules HSW, pneumatic

Technical data

Stroke adjustment

Swivel angle:

- An angle offset of $\alpha = \pm 5^\circ$ per end position can be set to adapt the handling module to the transfer system.

Linear stroke:

- Once the HSW has been mounted, the linear stroke of the pick and place position can be set independently of each other.

Swivel angle

Procedure:

- 1 Loosen the screws
- 2 Adjust the slotted guide plate using the adjusting screw (the slotted guide plate must always make contact with the guide ring)
- 3 Tighten the screws

Linear stroke

Procedure:

- 1 Loosen the lock nut
- 2 Set the desired linear stroke using the cushioning component/adjusting screw
- 3 Tighten the lock nut

Handling modules HSW, pneumatic

Technical data

Wait position module

- Enables a movement to be paused before the end position, outside of the operating range (→ Step 2)
- The wait position module can be approached dynamically from the end position. This greatly reduces the cycle time
- Flexible adjustment within the adjustment range (working stroke) possible
- The wait position module may only be used with shock absorbers due to the high dynamic forces that occur
- The handling module HSW and actuating cylinder are actuated via a 5/2-way valve
- The valve for the wait position module should be activated with a time delay compared with the valve for the handling module

Cycle sequence

Step 1:
Handling module is in the horizontal end position.
Wait position module is retracted.

Step 2:
Handling module moves to the vertical end position.
Wait position module advances with time delay.
Handling module pauses outside the operating range.

Step 3:
Wait position module retracts.
Handling module moves into the operating range.

Step 4:
Handling module moves to the horizontal end position.

| | | | |
|-------------------------------------|----|----|----|
| Size | 10 | 12 | 16 |
| Max. stroke of wait position module | 10 | 15 | 25 |

Mounting options

Directly via through-holes

1 With or without centring rings

Via slot nuts on profile supports

User-specific

Note

The handling module HSW-10 can also be attached with the adjusting unit HMX-1.
