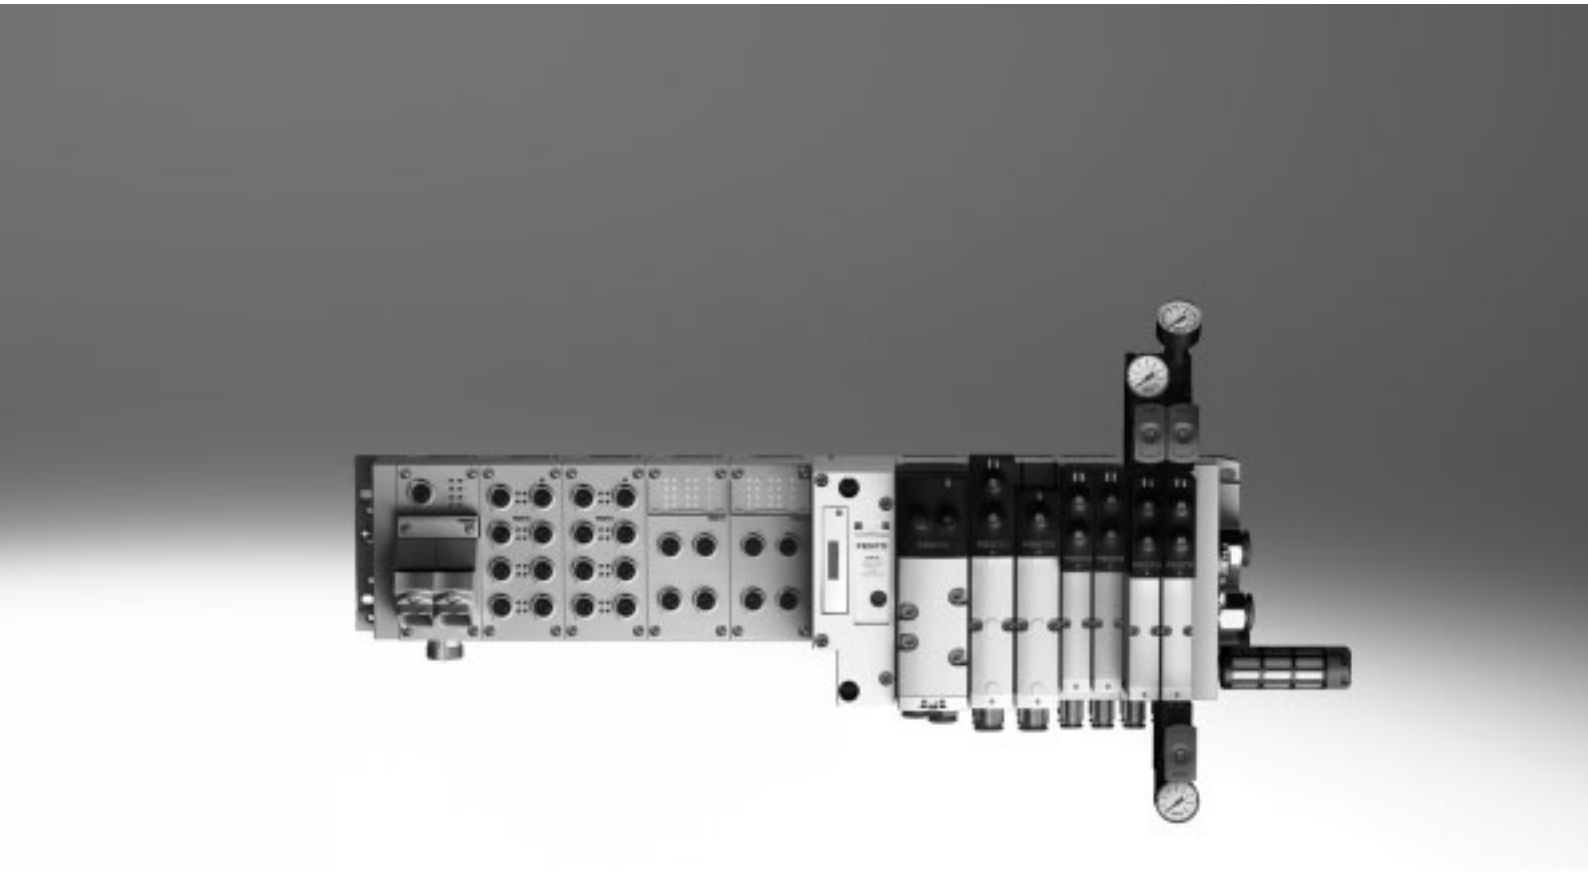
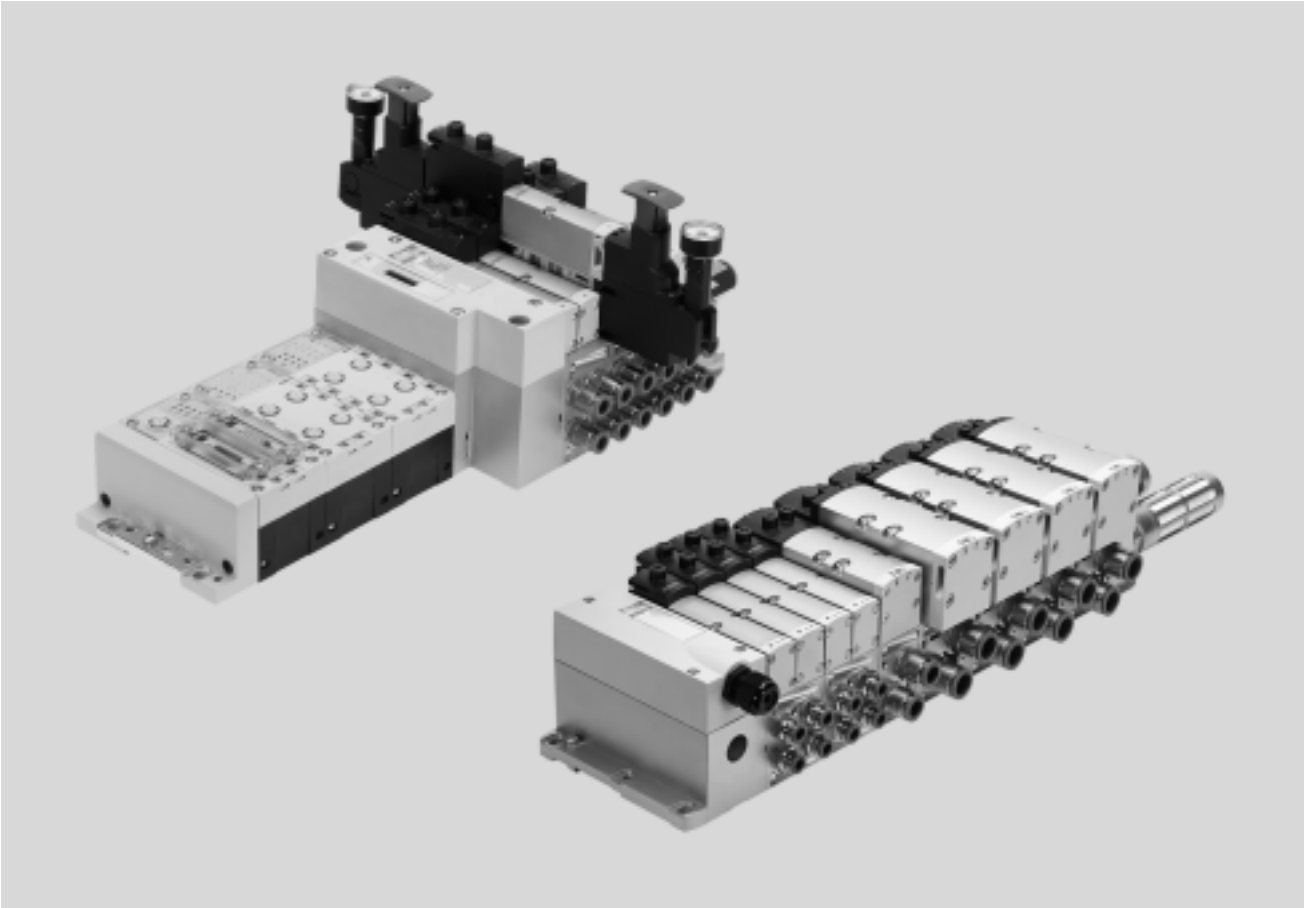
Valve terminals VTSA/VTSA-F, NPT

FESTO



Valve terminals VTSA/VTSA-F, NPT

Key features



Innovative

- High-performance valves in sturdy metal housing
- Four valve sizes on one valve terminal
- Standardised from the multi-pin plug to the fieldbus connection and control block
- Dream team: fieldbus valve terminal suitable for electrical peripherals CPX. This means:
  - Forward-looking internal communication system for controlling the valves and CPX modules
  - Four valve sizes on one valve terminal without adapters
- Valve functions for integration in control architectures of higher categories to EN ISO 13849-1

Versatile

- Modular system offering a range of configuration options
- Expandable with up to 32 solenoid coils
- Conversions and extensions are possible at any time
- Manifold sub-bases can be extended using four screws, sturdy duct separation on metal support
- Integration of innovative function modules possible
- Supply plates enable a flexible air supply and variable pressure zones
- Reverse operation
- High pressure range
  –0.9 ... 10 bar,
  flow range 550 ... 4000 l/min
- Wide range of valve functions
- Valve supply: 24 V DC or 110 V AC

Reliable

- Sturdy and durable metal components
  - Valves
  - Manifold sub-bases
  - Seals
- Fast troubleshooting thanks to LEDs on the valves and diagnostics via fieldbus
- Reliable servicing thanks to valves that can be replaced quickly and easily
- Manual override either non-detenting, non-detenting/detenting or covered
- Durable thanks to tried-and-tested piston spool valves
- Large and durable labelling system
- 100% duty cycle

Easy to install

- Assembled and inspected unit, ready for installation
- Reduced outlay on selection, ordering, installation and commissioning
- Secure mounting on wall or H-rail

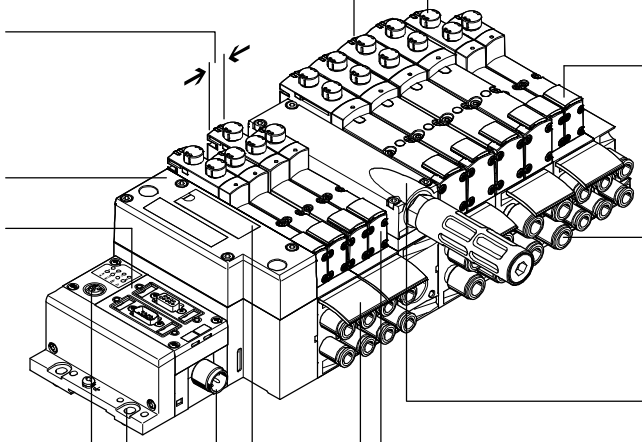
Note

The key features, valves and functions of width 65 mm are described separately in the chapter "Adaptation to width 65 mm, ISO size 3 (technology type 04)" ➔ Page 165.

New
Valve VSVA-B-P53EP-...
Valve VSVA-B-P53BD-...

Valve terminals VTSA/VTSA-F, NPT

Key features



Reduced downtimes:
On-the-spot diagnostics via LEDs

Width 18 mm, 26 mm, 42 mm and 52 mm can be combined on a single valve terminal without adapter

Pneumatic interface to CPX

Simple electrical connections
- Fieldbus connection via CPX
- Multi-pin plug connection with pre-assembled cable or terminal strip (Cage Clamp®)
- Control block via CPX
- AS-Interface
- Individual connection

CPX diagnostic interface for hand-held devices (channel-oriented diagnostics down to the individual valve)

Quick mounting:
Direct mounting using screws or H-rail

Safe:
Valves, outputs and logic voltage can be switched off separately

Reliable operation:
Manual override, detenting, non-detenting/detenting or covered

Flexible:
- 32 valve positions/32 solenoid coils
- One valve series for a wide range of flow rates

Functional:
Large ports, flow-optimised ducts, sturdy metal thread or pre-assembled QS connections

Modular:
Air supply plates facilitate the creation of multiple pressure zones as well as numerous additional exhaust and supply ports

Comprehensive range of valve functions

Practical:
Large inscription labels

Equipment options

Valve functions

- 2x 2/2-way valve, single solenoid, pneumatic spring, normally closed
- 2x 3/2-way valve, single solenoid
  - Normally open
  - Normally open, reversible
  - Normally closed
  - Normally closed, reversible
- 2x 3/2-way valve, single solenoid
  - 1x normally open, 1x normally closed
  - 1x normally open, 1x normally closed, reversible
- 5/2-way solenoid valve
  - Single solenoid, pneumatic spring/mechanical spring
  - Double solenoid
  - Double solenoid with dominant signal
- 5/2-way solenoid valves for special functions, single solenoid
  - Mechanical spring
  - Switching position sensing via inductive sensors with PNP or NPN output
  - Protection against unexpected start-up to EN 1037
  - Reversing
- 5/3-way solenoid valve
  - Mid-position pressurised
  - Mid-position closed
  - Mid-position exhausted
- 5/3-way solenoid valve for special functions
  - Switching position 14 is retained (switching position 14 is retained in the event of an emergency-off application/power failure), there is no spring return on switching position 12
  - Only for valve terminal (plug-in)
  - Mid-position exhausted or mid-position 1⇢2, 4⇢5
  - Switching position 14 is retained
  - Pneumatic spring return
- 5/3-way solenoid valve for special functions
  - Switching position 12 is retained (switching position 12 is retained in the event of an emergency-off application/power failure), there is no spring return on switching position 14.
  - Only for valve terminal (plug-in)
  - Mid-position exhausted or mid-position 1⇢4, 2⇢3
  - Switching position 12 is retained
  - Pneumatic spring return
- Soft-start valve for slow and safe pressure build-up
  - High degree of safety
  - Sensor function provides feedback on switching operation

Note

The key features, valves and functions of width 65 mm are described separately in the chapter "Adaptation to width 65 mm", ISO size 3 (technology type 04) ➔ Page 165.

Valve terminals VTSA/VTSA-F, NPT

Key features

Special features

Individual valve on individual sub-base up to width 52 mm

Plug-in

- Electrical connection via standardised 4-pin M12 plug or via 4-pin spring-loaded terminal for configuration by the user
- Available with internal/external pilot air supply

Square plug or plug-in, with integrated piston position sensing

- Electrical connection to DIN EN 175301-803 type C (square plug) or
- For configuration by the user via 4-pin spring-loaded terminal or
- Cable with open end

Valve terminal with fieldbus connection and electrical peripherals

CPX terminal

- Max. 32 valve positions/ max. 32 solenoid coils
- Any compressed air supply
- Any number of pressure zones

Valve terminal with individual connection

- Max. 20 valve positions/ max. 20 solenoid coils
- Any compressed air supply
- Any number of pressure zones

Valve terminal with multi-pin plug connection

- Max. 32 valve positions/ max. 32 solenoid coils
- Parallel modular valve linking
- Any compressed air supply
- Any number of pressure zones

AS-Interface

- 1 to 8 valve positions/ max. 8 solenoid coils
- Soft-start valve for slow and safe pressure build-up

Combinable

- Valve width 18 mm: flow rate of VTSA up to 550 l/min, VTSA-F up to 700 l/min
- Valve width 26 mm: flow rate of VTSA up to 1100 l/min, VTSA-F up to 1350 l/min
- Valve width 42 mm: flow rate of VTSA up to 1300 l/min, VTSA-F up to 1860 l/min
- Valve width 52 mm: flow rate up to 2900 l/min
- Widths 18 mm, 26 mm, 42 mm, 52 mm and 65 mm can be combined on a single valve terminal (using an adapter)

Note

- Valve terminal VTSA complies with ISO 15407-2 in width 18 and 26 mm and
- With ISO 5599-2 in size 42 and 52 mm

Valve terminal configurator

➔ Internet: www.festo.com

A valve terminal configurator is available to help you select a suitable VTSA/VTSA-F valve terminal. This makes it much easier to order the right product.

The valve terminals are fully assembled according to your order specification and are individually checked. This reduces assembly and installation time to a minimum.

Order a valve terminal VTSA using the order code:

Ordering system for VTSA
➔ Internet: vtsa

Ordering system for CPX
➔ Internet: cpx

Order a valve terminal VTSA-F using the order code:

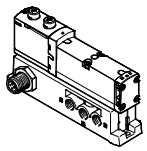
Ordering system for VTSA-F
➔ Internet: vtsa-f

Ordering system for CPX
➔ Internet: cpx

Valve terminals VTSA/VTSA-F, NPT

Key features

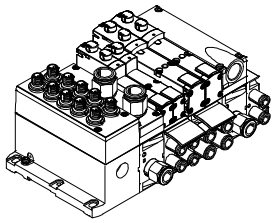
Individual pneumatic connection



Valves on individual sub-bases up to width 52 mm can be used for actuators further away from the valve terminal.

The electrical connection is established either via a standardised 4-pin M12 plug, 24 V DC (EN 61076-2-101), 4-pin spring-loaded terminal or a cable with open end, 24 V DC or 110 V AC, which are configured by the user.

Valve terminal with individual electrical connection

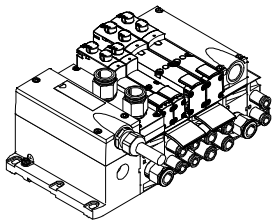


Control signals from the controller to the valve terminal are transmitted via an individual connecting cable.

The valve terminal can be equipped with max. 20 valves and max. 20 solenoid coils.

The electrical connection is established via a 5-pin M12 plug, 24 V DC.

Valve terminal with multi-pin plug connection



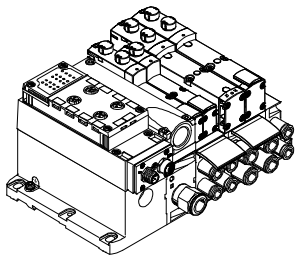
Control signals from the controller to the valve terminal are transmitted via a pre-assembled multi-wire cable or a multi-pin plug connection assembled by the user (spring-loaded terminal), which substantially reduces installation time.

The valve terminal can be equipped with max. 32 valves and max. 32 solenoid coils.

Versions

- Multi-pin plug connection with terminal strip (spring-loaded terminal), 24 V DC or 110 V AC
- Pre-assembled connecting cable, 24 V DC
- Sub-D plug connector for assembly by the user, 37-pin
- Round plug connector M23, 19-pin, 24 V DC

AS-Interface connection



A special feature of the AS-Interface is the simultaneous transmission of data and supply power via a two-wire cable. The encoded cable profile prevents connection with incorrect polarity.
The valve terminal with AS-Interface is available in the following versions:

- With one to eight modular valve positions (max. 8 solenoid coils). This corresponds to 1 to 8 VSVA valves.
- With all available valve functions.

The connection technology used for the inputs can be selected as with CPX: M8, M12, quick connection, Sub-D, spring-loaded terminal (terminals to IP20).

Additional information
➔ Internet: as-interface

- Note

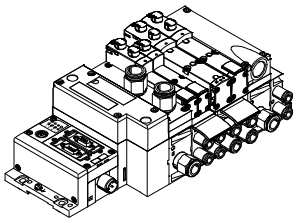
The valve terminal VTSA/VTSA-F with AS-Interface connection is based on the same electrical interlinking module as the valve terminal with multi-pin plug connection. This means it is possible to convert a valve terminal with multi-pin plug connection using an AS-Interface module (➔ 125). The technical specifications of the AS-Interface system must be observed in this case.

➔ Page 58
➔ Internet: as-interface

Valve terminals VTSA/VTSA-F, NPT

Key features

Valve terminal with fieldbus connection from the CPX system



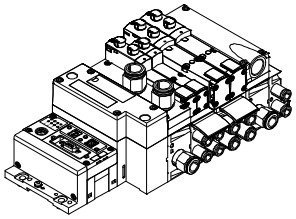
An integrated fieldbus node manages the communication connection with a higher-order PLC. This enables a space-saving pneumatic and electronic solution.

Valve terminals with fieldbus interfaces from the CPX system can be configured with up to 16 manifold sub-bases. With 2 solenoid coils per connection, up to 32 solenoid coils can thus be actuated.

Versions
- PROFIBUS
- INTERBUS
- DeviceNet
- CANopen
- CC-Link
- EtherNet/IP
- EtherCAT
- Modbus TCP
- PROFINET
- POWERLINK
- Sercos III

➔ Internet: cpx

Valve terminal with control block connection from the CPX system



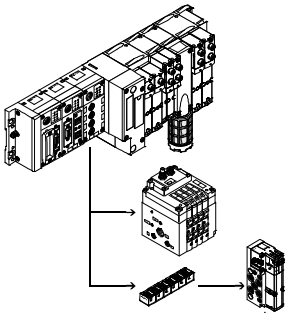
A controller integrated in the Festo valve terminal enables the construction of stand-alone control units with protection to IP65 without a control cabinet thanks to two different operating modes.

In the slave operating mode, these valve terminals can be used for intelligent preprocessing and are therefore ideal modules for designs using decentralised intelligence.

In the master operating mode, terminal groups can be designed with many options and functions that can autonomously control a medium-sized machine/system.

➔ Internet: cpx

CP string extension from the CPX system



The optional CP string extension enables additional valve terminals and I/O modules to be connected to the fieldbus node of the CPX terminal on up to 4 CP strings. Different input and output modules as well as CPV-SC, CPV and CPA valve terminals can be connected.

The maximum length of the CP string extension is 10 metres, which means that the extension modules can be mounted directly on-site. All the required electrical signals are transmitted via the CP cable, which in turn means that no further installation is needed on the extension module.

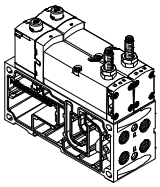
One CP string offers:
- 32 input signals
- 32 output signals for output modules 24 V DC or solenoid coils
- Logic and sensor supply for the input modules
- Load voltage supply for the valve terminals
- Logic supply for the output module

➔ Internet: ctec

Valve terminals VTSA/VTSA-F, NPT

Key features – Valves

Solenoid valve with switching position sensing, width 18 mm, 26 mm



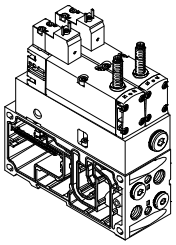
The 5/2-way single solenoid valve with spring return in width 26 mm features switching position sensing. The normal position of the piston spool valve is monitored.

Designed as a plug-in or individual connection valve with pilot valves to ISO 15218 and square plug type C. This valve is not a safety device in accordance with the Machinery Directive 2006/42/EC.

It is suitable for use in safety-related parts of control systems to EN ISO 13849-1.

➔ Page 128

Control block with safety function, width 26 mm



5/2-way solenoid valve
These valves are used for special applications, for example for:

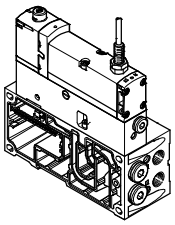
- Protecting against unexpected start-up
- Safe reversing
- Drives in manually loaded devices

This control block is suitable for use as a press safety valve to EN 962.

This valve is a safety device in accordance with the Machinery Directive 2006/42/EC.

➔ Page 138

Pilot air switching valve, width 18 mm, 26 mm



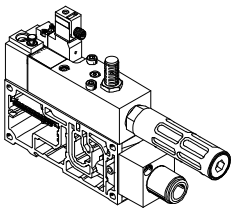
The pilot air switching valve is a combination of a 5/2-way solenoid valve with switching position sensing and the intermediate plate VABF-S4-...-S. It enables the pilot air supply to be verifiably switched on and off (sensor function) from duct 1 to 14 for the entire pressure zone or valve terminal. The piston position sensing feature is realised by means of an inductive PNP proximity sensor with cable and push-in connector in the size M12x1 to EN 61076-2-104.
This valve is not a safety device in accordance with the Machinery Directive 2006/42/EC.
It is suitable for use in safety-related parts of control systems to EN ISO 13849-1.

➔ Page 144

Note

The pilot air switching valve can only be operated on the valve terminal VTSA/VTSA-F in combination with a right-hand end plate for external pilot air type VABE-S6-1RZ- .... Port 14 on the right-hand end plate must be sealed for this.

Soft-start valve, module width 43 mm



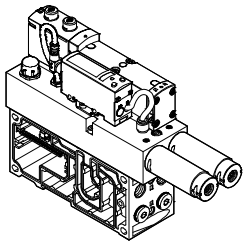
The soft-start valve is separately electrically actuated, independently of the multi-pin plug, AS-Interface or fieldbus connection, via a 4-pin plug to ISO 15407-1 or optionally via an M12 adapter.
The valve can optionally be ordered with a sensor that monitors switching of the soft-start valve. The soft-start valve can supply the valve terminal or one or more pressure zones with supply air.
The pressure build-up for each pressure zone is optimised for the application directly at the valve terminal by setting the switch-over pressure and the filling time.
A maximum of 5 soft-start valves can be integrated on one valve terminal in this way.

➔ Page 152

Valve terminals VTSA/VTSA-F, NPT

Key features – Valves

Vacuum block, module width 53 mm



5/3-way solenoid valve, with switching position 12 retained. The vacuum block is screwed to a manifold sub-base for 2 valve positions, width 26 mm, and integrated into the valve terminal VTSA/VTSA-F. The vacuum block is supplied with electricity and the vacuum is sensed via a standardised 4-pin M12 plug. The vacuum block is used in conjunction with a suction gripper to receive, hold and place components. Placing is realised by means of an adjustable ejector pulse. The vacuum block is equipped with an air-saving function. In the absence of electric or pneumatic supply, the valve reverts to switching position 12 "create vacuum".

➔ Page 159

5/3-way solenoid valve for special functions

For holding, blocking a movement (mechanically)

5/3-way solenoid valve for special functions; port 2 is pressurised, port 4 vented. Switching position 14 is retained (code SA).

Possible applications:
- Using lifting cylinders
- Using rotary cylinders

5/3-way solenoid valve for special functions; port 2 is pressurised, port 4 vented. Switching position 12 is retained (code SE).

Possible applications:
- Using lifting cylinders
- Using rotary cylinders

For pressureless switching, self-latching loop, pneumatic operation

5/3-way solenoid valve for special functions (3 phases). Mid-position is exhausted. Switching position 14 is retained.

Possible applications:
- Pneumatic manual clamps for devices (inserting stations)

5/3-way solenoid valve for special functions (3 phases). Mid-position is exhausted. Switching position 12 is retained.

Possible applications:
- Pneumatic manual clamps for devices (inserting stations)

Modular pneumatic peripherals

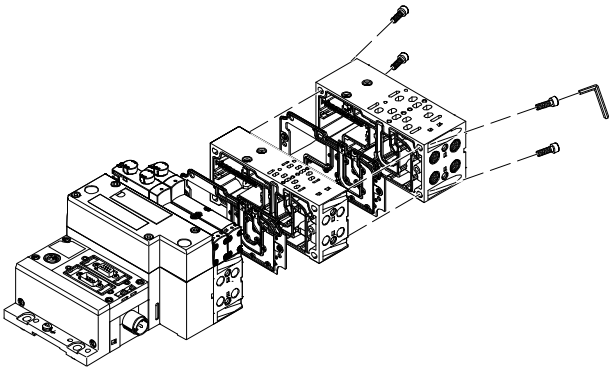
The modular design of the valve terminal VTSA/VTSA-F enables maximum flexibility right from the planning stage and offers maximum ease of service in operation.

The system consists of manifold sub-bases and valves.
The manifold sub-bases are screwed together and thus form the support system for the valves.

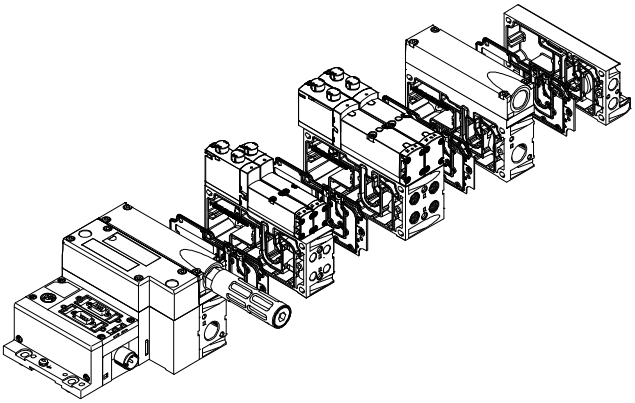
Inside the manifold sub-bases are the ducts for supplying compressed air to and exhausting from the valve terminal as well as the working ports for the pneumatic cylinders for each valve.

Each manifold sub-base is connected to the next using four screws.
Individual valve terminal sections can be isolated and further blocks easily inserted by loosening these screws.
This ensures that the valve terminal can be rapidly and reliably extended.

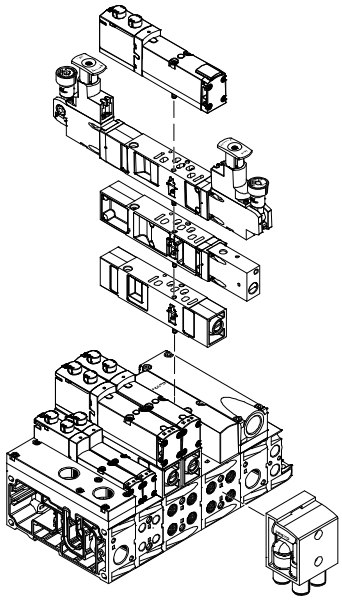
Basic system modularity



Valve modularity



Vertical stacking modularity



- Note

See also "Adaptation to width 65 mm, ISO size 3 (technology type 04)"
➔ page 165

Modular electrical peripherals

The manner in which the valves are actuated differs according to whether you are using a multi-pin terminal or fieldbus terminal.

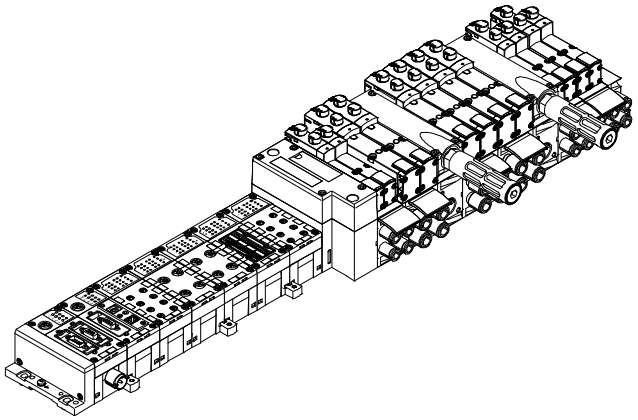
The VTSA/VTSA-F with CPX interface is based on the internal bus system of the CPX and uses this communication system for all solenoid coils and a range of electrical input and output functions.

Parallel linking enables the following:
- Transmission of switching information
- Compact design
- Position-based diagnostics
- Separate voltage supply for valves

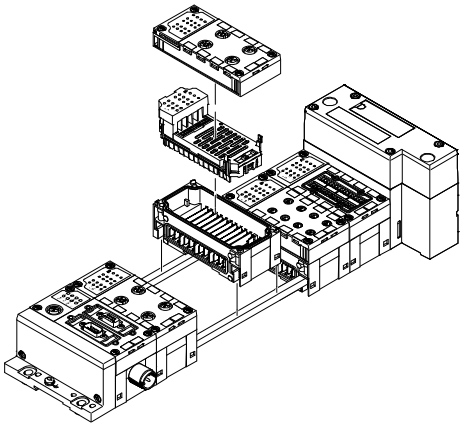
- Flexible conversion without address shifting
- Option of CP interface
- CPX-FEC as stand-alone controller with access via Ethernet and web server
- Transmission of status, parameter and diagnostic data

➔ Internet: cpx

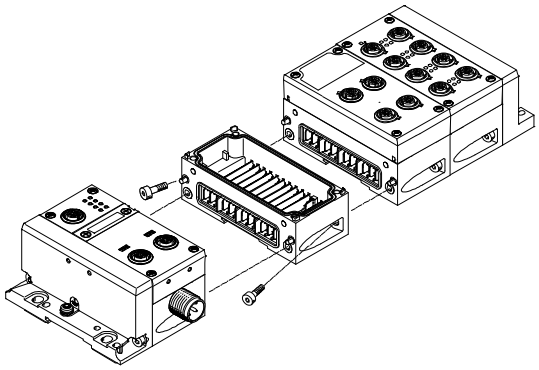
VTSA/VTSA-F with electrical peripherals CPX



Modularity with electrical peripherals CPX



CPX terminal in metal design



The CPX modules in metal design are mechanically connected to one another using an angled fitting. The CPX terminal can thus be expanded at any time.

Note

The CPX connection blocks are also available in a metal design. This means a complete solution in a sturdy metal design can be selected for applications of the valve terminal VTSA/VTSA-F in welding environments.

Individual sub-base, width 18 mm, ISO 15407-2

Order code:
- Using individual part numbers

Individual sub-bases can be equipped with any valve.

Valve terminal widths

Order code for VTSA:
- 44E-... for the electrical components
- 44P-... for the pneumatic components

Order code for VTSA-F:
- 45E-... for the electrical components
- 45P-... for the pneumatic components

Regardless of the type of actuation (e.g. multi-pin plug, fieldbus, etc.), valve terminals VTSA/VTSA-F in the widths
- 18 mm
- 26 mm
- 42 mm
- 52 mm

can be combined without adapters. This enables a flow range of 400 l/min to 2,900 l/min in the case of VTSA and 700 l/min to 2,900 l/min in the case of VTSA-F to be covered on one valve terminal. A wide range of valve functions and vertical stacking components are available for all widths.

Valves with a width of 65 mm can be mixed with other widths. However, these are only configured after the adapter plate VABA and are thus always at the end of the valve terminal configuration.

See "Adaptation to width 65 mm, ISO size 3 (technology type 04)"
➔ page 165

- 44P-... for the pneumatic components

Order code for VTSA-F:
- 45E-... for the electrical components
- 45P-... for the pneumatic components

Valve terminals VTSA/VTSA-F with individual electrical connection can be expanded with up to 20 valves with max. 20 solenoid coils.
The manifold sub-bases for valves with a width of 18 or 26 mm are either prepared for
- 2 single solenoid valves or
- 2 double solenoid valves

and the manifold sub-bases for valves with a width of 42, 52 and 65 mm are prepared for
- 1 single solenoid valve or
- 1 double solenoid valve.

- Double solenoid valve positions can be equipped with any valve or a blanking plate.
- Single solenoid valve positions can only be equipped with single solenoid valves or a blanking plate.
- The electrical connection is established via a 5-pin M12 plug (24 V DC).
- Valves with a width of 65 mm cannot be mixed with other widths – these are always at the end of the valve terminal configuration. See "Adaptation to width 65 mm, ISO size 3 (technology type 04)"

➔ Page 165

	Brief description	➔ Page/Internet
1 Cover	For individual connection	125
2 Multi-pin plug connection	Individual connection with M12, 10-way or 6-way (including cover)	125

Valve terminal with electrical multi-pin plug connection

Order code for VTSA:
- 44E-... for the electrical components
- 44P-... for the pneumatic components

Order code for VTSA-F:
- 45E-... for the electrical components
- 45P-... for the pneumatic components

Valve terminals VTSA/VTSA-F with electrical multi-pin plug connection can be expanded with up to 32 valves with max. 32 solenoid coils. The manifold sub-bases for valves with a width of 18 or 26 mm are prepared for
– 2 single solenoid valves or
– 2 double solenoid valves
and the manifold sub-bases for valves with a width of 42, 52 and 65 mm are prepared for
– 1 single solenoid valve or
– 1 double solenoid valve.

- Double solenoid valve positions can be equipped with any valve or a blanking plate.
- Single solenoid valve positions can only be equipped with single solenoid valves or a blanking plate.
- The following multi-pin plug connections to IP65 are available:
– 37-pin Sub-D connection (24 V DC): the connecting cable can be ordered in lengths of 2.5 m, 5 m and 10 m for max. 8, 22 or 32 solenoid coils respectively.
– Terminal strip (24 V DC or 110 V AC) 19-pin round connector (24 V DC)
- Valves with a width of 65 mm cannot be mixed with other widths – these are always at the end of the valve terminal configuration. See "Adaptation to width 65 mm, ISO size 3 (technology type 04)"

- 2 single solenoid valves or
- 2 double solenoid valves

and the manifold sub-bases for valves with a width of 42, 52 and 65 mm are prepared for
- 1 single solenoid valve or
- 1 double solenoid valve.

- Double solenoid valve positions can be equipped with any valve or a blanking plate.
- Single solenoid valve positions can only be equipped with single solenoid valves or a blanking plate.
- Valves with a width of 65 mm cannot be mixed with other widths – these are always at the end of the valve terminal configuration. See "Adaptation to width 65 mm, ISO size 3 (technology type 04)"

	Brief description	➔ Page/Internet
1 Multi-pin plug connection	Can be ordered together with the AS-Interface module as an electrical connection for AS-Interface	125
2 Manifold block for AS-Interface	–	126
3 AS-Interface module	–	125

Valve terminal with fieldbus connection, control block (electrical peripherals CPX)

Order code:
- 50E-... for the electrical peripherals, plastic manifold module
- 51E-... for the electrical peripherals, metal manifold module
- 53E-... for the electrical peripherals, for control cabinet installation

For VTSA:
- 44P-... for the pneumatic components

For VTSA-F:
- 45P-... for the pneumatic components

Valve terminals VTSA/VTSA-F with fieldbus interface can be expanded with up to 32 valves with max. 32 solenoid coils.
The manifold sub-bases for valves with a width of 18 or 26 mm are either prepared for
- 2 single solenoid valves or
- 2 double solenoid valves

and the manifold sub-bases for valves with a width of 42, 52 and 65 mm are prepared for
- 1 single solenoid valve or
- 1 double solenoid valve.

- Double solenoid valve positions can be equipped with any valve or a blanking plate.
- Single solenoid valve positions can only be equipped with single solenoid valves or a blanking plate.

Each valve position can be equipped with any valve or a blanking plate. The rules for CPX apply to the equipment that can be used in combination with the electrical peripherals CPX.
In general:
- Max. 10 electrical modules
- Digital inputs/outputs
- Analogue inputs/outputs
- Parameterisation of inputs and outputs
- Integrated convenient diagnostic system
- Preventive maintenance concepts

- Valves with a width of 65 mm cannot be mixed with other widths – these are always at the end of the valve terminal configuration. See "Adaptation to width 65 mm, ISO size 3 (technology type 04)"

Valve terminal with fieldbus/multi-pin plug connection and individually electrically actuated valve

In applications with specific emergency off conditions, it may be necessary to switch one or more valves separately from the valve terminal controller. Standard valves (VSVA) with individual electrical connection (round or square plug) are mounted on the valve terminal to this end.
In order for protection class IP65 to be achieved, the functionless opening in the sub-base for the electrical connection must be sealed.
A sealing cap is available for the 18 mm and 26 mm widths.
With manifold or individual sub-bases, valves with width 42 mm and 52 mm must be used with a seal to comply with the
IP protection class (see ➔ page 124).
For central control of the valve terminal via a multi-pin plug or fieldbus connection, the valve position occupied in this way acts like a vacant position, i.e. the assigned address in the fieldbus node or the corresponding connection in the multi-pin plug connection is occupied.

	Brief description	➔ Page/Internet
1 Sealing cap	For sealing the electrical connection on the sub-base	124
2 Valve	Width 18 mm or width 26 mm	valves vsva
3 Connecting cable	–	valves vsva
4 Seal	For ensuring the IP protection class (with width 42 mm and 52 mm)	124
5 Valve	Width 42 mm or width 52 mm	valves vsva

Note

Standard valves VSVA can be used for valve terminal allocation. A vacant position must be provided for this in the valve terminal configurator.

The corresponding standard valve VSVA can be ordered on the Internet at:

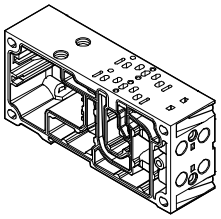
Manifold sub-base



VTSA/VTSA-F is based on a modular system which consists of manifold sub-bases and valves. The VTSA-F manifold sub-bases are designed to optimise flow. Manifold sub-bases are available for valve widths 18 mm and 26 mm in a double grid, i.e. two valves per manifold sub-base. For valves with a width of 42 mm or 52 mm, there are manifold sub-bases with one valve per sub-base. The manifold sub-base contains a duct seal and an electrical interlinking module. They can be freely mixed within a valve terminal. The manifold sub-bases are screwed together and thus form the support system for the valves. Inside the manifold sub-bases are the ducts for supplying compressed air to and exhausting from the valve terminal as well as the working ports for the pneumatic cylinders for each valve. Each manifold sub-base is connected to the next using four screws. Individual valve terminal sections can be isolated and further manifold sub-bases inserted by loosening these screws. This ensures that the valve terminal can be rapidly and reliably extended.

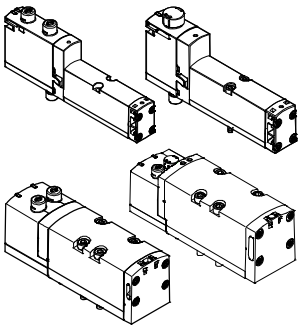
Valve terminals VTSA/VTSA-F, NPT

Key features – Pneumatic components

Sub-base valve



All valves are fitted with piston spool and patented sealing system, which ensures efficient sealing, a broad operating pressure range and long service life.

Sub-base valves can be quickly replaced since the tubing connections remain on the manifold sub-base.

Irrespective of the valve function there are sub-base valves with one solenoid coil (single solenoid) or with two solenoid coils for double solenoid or double valve functions.

Reverse/vacuum operation

Select reverse operation (code Z) if you wish to operate an actuator (cylinder) with different pressures for the forward and return stroke. Please note that the valves must then be operated via a separate pressure zone.

The reversible 3/2-way solenoid valves are also suitable for vacuum operation.

Reverse operation is only possible in pressure zones with external pilot air supply.

Note

- If a pressure zone is in reverse operation, supply air is connected to port 3/5 and exhausting takes place at port 1 at all valve positions in this pressure zone.
- Reversible pressure regulators cannot be selected when a pressure zone is in reverse operation.
- With reversible pressure regulators, only the valve at this position is in reverse operation.
- When using 5/3-way valves in reverse operation, the mid-position function switches from exhausted to pressurised and vice versa.

Blanking plate

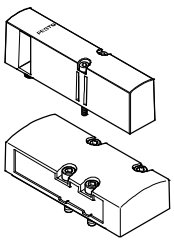


Plate without valve function for reserving valve positions on a valve terminal.

Valve and blanking plates are attached to the manifold sub-base using screws.

Design

Valve replacement

The valves are attached to the metal manifold sub-base using two or four screws, which means that they can be easily replaced. The mechanical robustness of the manifold sub-base guarantees efficient long-term sealing.

Extension

Vacant positions can be fitted with valves at a later date. The dimensions, mounting points and existing pneumatic installations remain unchanged during this process.

For more information and technical data on expansion, refer to the user documentation:
➔ Internet: P.BE-VTSA-44

Valve function							
Terminal code	Circuit symbol	Valve code	Width				Description
			18 mm	26 mm	42 mm	52 mm	
VC		T22C	■	■	■	■	2x 2/2-way valve, single solenoid • Normally closed • Pneumatic spring return

1) If neither solenoid coil is energised, the valve moves to its mid-position by means of a mechanical spring. If the two coils are permanently energised one after the other, the valve remains in the switching position of the coil that was activated first.

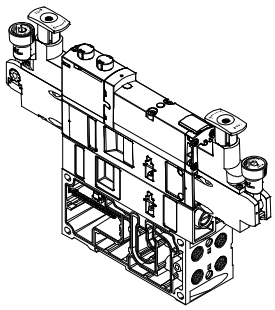
Vertical stacking

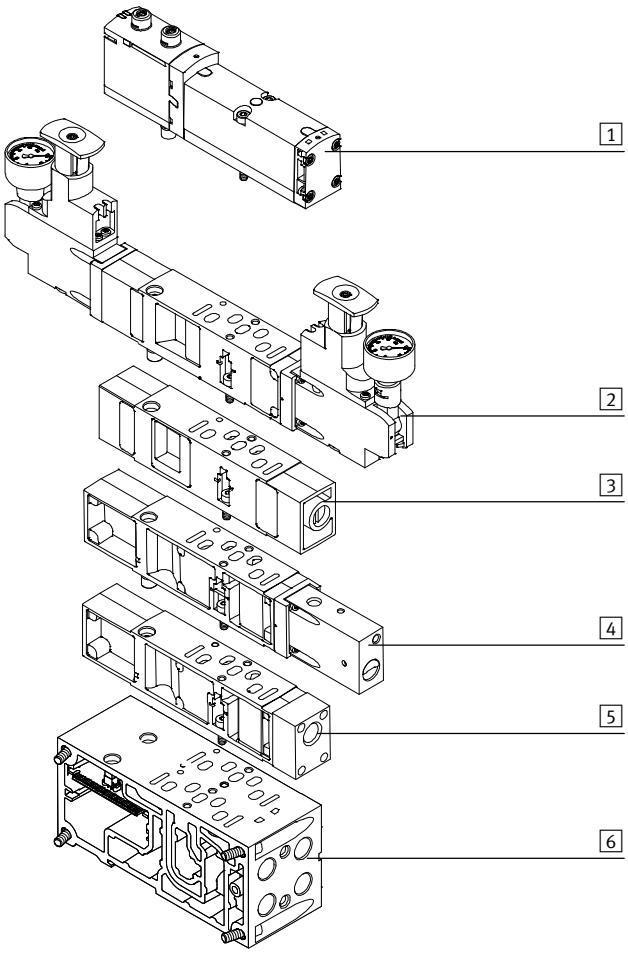


Additional function units can be added to each valve position between the sub-base (manifold sub-base) and the valve. These functions are known as vertical stacking modules and enable special functioning or control of an individual valve position. Combinations of several valve sizes on one valve terminal are possible.

- Note

Certain combinations are not recommended due to the design of the individual vertical stacking components.

Vertical stacking components

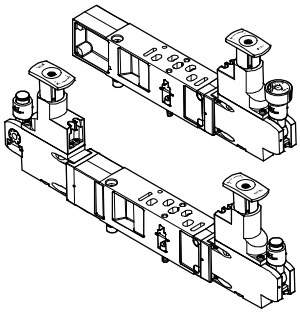


The following component sequence is recommended for valve positions with vertical stacking:

1. Valve VSVA
2. Pressure regulator plate
3. Flow control plate
4. Vertical pressure shut-off plate
5. Vertical supply plate
6. Manifold sub-base

Vertical stacking

Pressure regulator plate



An adjustable pressure regulator can be installed between the sub-base (manifold sub-base) and the valve in order to control the force of the triggered actuator.

This pressure regulator maintains an essentially constant output pressure (secondary side) independent of pressure fluctuations (primary side) and air consumption. Also suitable for valves with symmetrical coil layout.

Standard version:

- Standard port pattern to ISO 15407-2 or ISO 5599-2
- For supply pressure up to 6 bar or up to 10 bar
- Without pressure gauge (optional)
- Regulator knob with 3 positions (locked, reference position, free running)

- Note

With the A, B and AB pressure regulators VABF-S...-1-..., the control pressure should not be less than 2 bar.

Use the reversible A, B or AB pressure regulators for control pressures less than 2 bar.

- Note

Please note for repeat orders of pressure regulators in sizes 42 mm and 52 mm:
The part number imprinted on the regulator plate refers only to the standard equipment.

When reordering pressure regulators with additional features, such as a lockable rotary knob, extended design, etc., only use the VABF configurator.

➔ Internet: vabf-s2

Vertical stacking

Energy efficiency through dual-pressure operation or through operation with reversible pressure regulators

Energy conservation starts right from compressed air generation. It is possible to achieve an energy saving of up to 10% per 1 bar drop in pressure. Therefore, wherever possible reduce the pressure to the minimum required.
To save additional energy, you can operate valves in dual-pressure mode in a separate pressure zone.

To do this, the valves used must be operated in reverse mode, i.e. with reversed direction of flow (see also note on ➔ page 86). In dual-pressure operation, the valves are then supplied with pressure separately via ducts 3 and 5. The air is vented via duct 1.

Requirements for dual-pressure operation:

- Exhaust ducts 3 and 5 in the pressure zone are completely separate.
- Valves are used that can be operated in reverse mode.

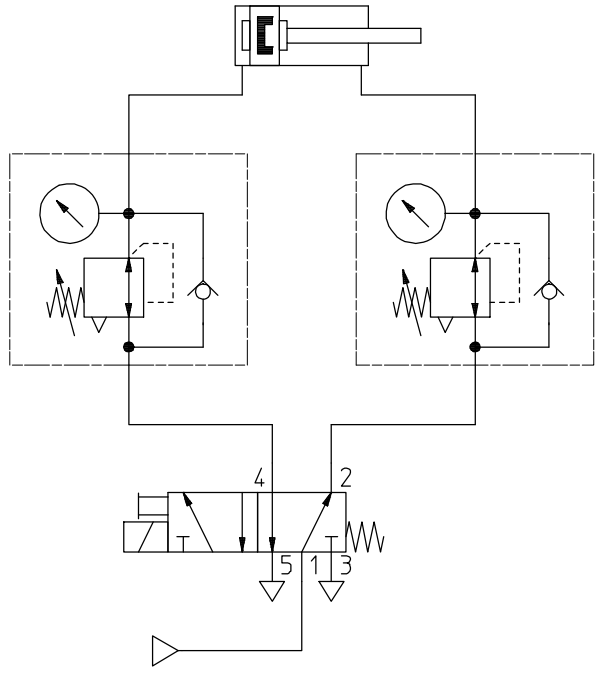
Advantages of dual-pressure operation:
It is possible to save energy if different pressures can be applied to one valve. The advantages are:

- Saves energy because the return stroke can be carried out using reduced force, e.g. 3 bar instead of 6 bar.
- Just one valve is required, as in the case of vacuum application with ejector pulse for example (e.g. duct 3 for vacuum switching, duct 5 for the ejector pulse).
- A reduction in compressed air consumption of up to 50% is possible if two different pressures can be applied to the valve (return stroke uses reduces pressure).

Advantages of reversible operation:
If compressed air is applied to the pressure regulator upstream of the valve (circuit diagram 2), exhausting is directly via the solenoid valve.
This has the following advantages:

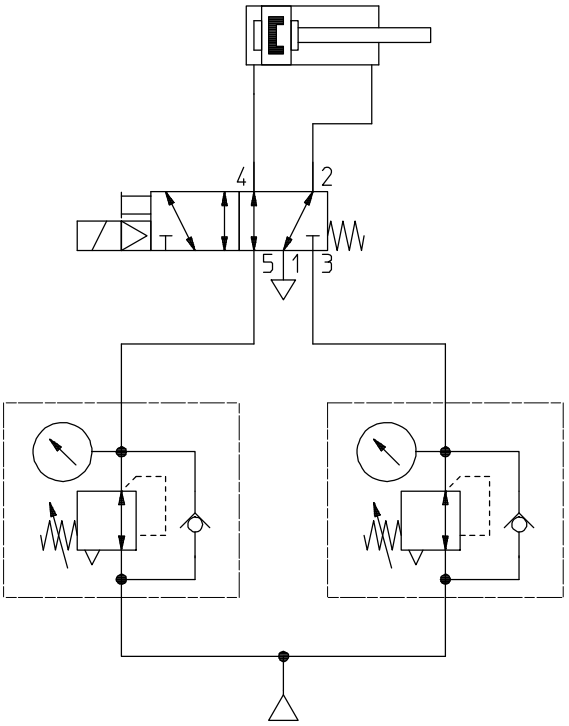
- Increased exhaust capacity, venting is up to 50% quicker
- Lower wear on the pressure regulator
- Very finely adjustable, perfect for very low operating pressures
- No quick exhaust valves are required.
- Fast cycle times
- The pressure regulator can be adjusted independently of the valve position because operating pressure is permanently present at the pressure regulator.

Dual-pressure operation with standard controller



Circuit diagram 1:
Pressure is regulated downstream of the valve

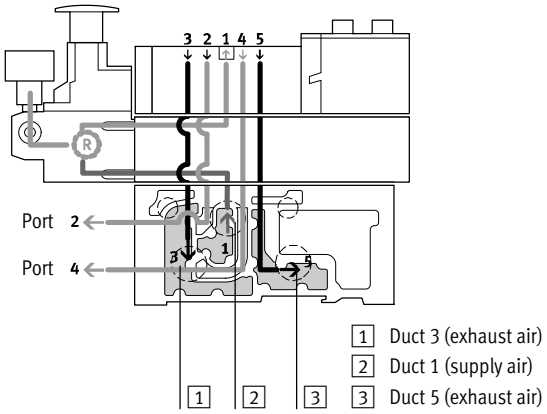
Dual-pressure operation with reversible controller



Circuit diagram 2:
Pressure is regulated upstream of the valve

Vertical stacking

Mode of operation of the pressure regulator plate (P regulator) for port 1; code: ZA, ZAY, ZF, ZFY



This pressure regulator regulates the pressure upstream of the valve in duct 1. Ducts 2 and 4 thus have the same regulated pressure.

During venting, the exhaust flow in the valve is from duct 2 to duct 3 and from duct 4 to duct 5.

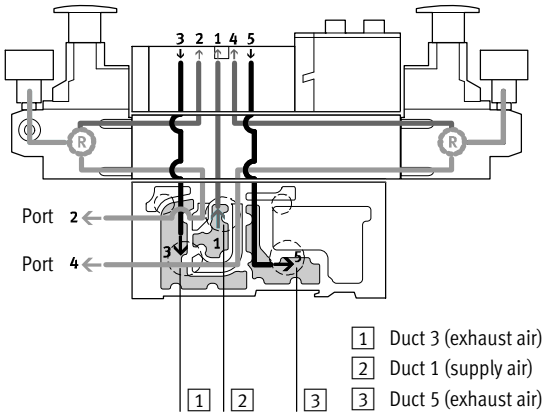
Advantages

- The pressure regulator is not affected by venting, since the pressure is regulated upstream of the valve.
- The pressure regulator can always be adjusted, since the pressure from the valve terminal is always present.

Application examples

- An equal working pressure is required at working ports 2 and 4.
- A lower working pressure (e.g. 3 bar) than the operating pressure present at the valve terminal (e.g. 8 bar) is required.

Mode of operation of the pressure regulator plate (AB regulator) for ports 2 and 4; code: ZD, ZDY, ZI, ZIY



This pressure regulator regulates the pressure in ducts 2 and 4 after the pressure medium flows through the valve. During venting, the exhaust flow in the valve is from duct 2 to duct 3 and from duct 4 to duct 5 via the pressure regulator.

Example with the following switching position:
The air flows from duct 1 of the manifold sub-base via the valve to duct 2, it is then regulated and made available at port 2 of the manifold sub-base. At the same time, venting takes place via duct 4 of the manifold sub-base, via the regulator and via the valve into duct 5 of the manifold sub-base.

Restrictions

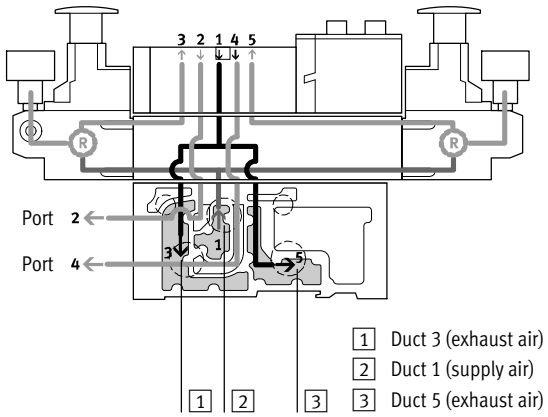
- The pressure regulator cannot be adjusted in the exhaust position. For example, the pressure regulator for duct 4 cannot be adjusted when the valve is pressurised in the switching position from duct 1 to duct 2 and exhausted from duct 4 to duct 5.

Application examples

- Two different working pressures are required at ports 2 and 4 instead of the valve terminal operating pressure.

Vertical stacking

Mode of operation of the pressure regulator plate (AB regulator, reversible) for ports 2 and 4, reversible; code: ZE, ZEY, ZJ, ZJY



With this pressure regulator, the air (duct 1) is split and routed directly to both pressure regulators. In each case the regulated air is present in ducts 3 and 5 on the valve. The valve is thus operated in reverse mode.
This means:

- Duct 3 routes the working pressure to port 2
- Duct 5 routes the working pressure to port 4

Example with the following switching position:
The air in duct 1 is split between ducts 3 and 5 in the regulator and flows from here to the valve. In the valve, the air is routed to port 2 of the manifold sub-base. The exhaust air is simultaneously routed via duct 4 of the manifold sub-base and via the valve to regulator duct 1, where it is split between ducts 3 and 5 and then discharged via the manifold sub-base.

Application examples

- Two different pressures are required in ducts 2 and 4 instead of the valve terminal's operating pressure.
- Quick exhausting is required.
- The pressure regulator must always be adjustable.

Note

- Reversible pressure regulator plates should only be combined with valves that can be operated in reverse mode.
- Valves in valve positions with vertical pressure shut-off plates are operated with internal pilot air, even when the valve terminal is operated with external pilot air supply.
- The following combination of reversible valve terminals with vertical stacking components is not permitted:
  - Reversible pressure regulator plates
  - Flow control plates
  - Vertical pressure shut-off plates
  - Vertical supply plates

Advantages

- Fast cycle times
- 50% higher exhaust flow rate, as air is not exhausted via the pressure regulator. The load on the pressure regulator is also reduced.
- No quick exhaust valves are required.
- Operating pressure is always present at the pressure regulator, as the pressure is regulated upstream of the valve, i.e. the regulator can always be adjusted.

Disadvantages

- 2x 3/2-way solenoid valves (code N, K, H) cannot be used, as pressure is present at ports 3 and 5.
- No practical combination with a flow control plate possible.

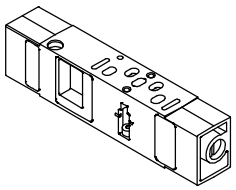
1) These functions are available via the pressure regulator configurator VABF-S2 for width 42 mm and 52 mm (ISO 5599-2, ISO 1 and ISO 2) only
Alternatively they can be selected for all four sizes in the valve terminal configurator or via their own order numbers in the chapter Accessories on page 123
2) All variants are only possible with VABF-S2

Vertical stacking

Flow control plate



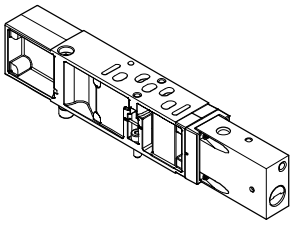
The flow control plate is equipped with two flow control valves on which the exhaust air flow rate at exhaust ports 3 or 5 can be adjusted. This enables the movement of the drive to be initiated and the desired speed to be set on the valve terminal using the manual override.
Ducts 3 and 5 can be adjusted independently of each other.

Note

On reversible valve terminals, the air flow is controlled in ducts 3 and 5 upstream of the valve.

Code		Type	Width				Description
			18 mm	26 mm	42 mm	52 mm	
X		VABF-S4-...F1B1-C	■	■	■	■	• Restricts the exhaust air downstream of the valve in ducts 3 and 5

Vertical pressure shut-off plate



The vertical pressure shut-off plate is equipped with a switch via which the compressed air supply can be shut off. This enables a solenoid directional control valve or subsequent vertical stacking plate to be replaced without switching off the overall air supply. If the control chain has a redundant connection, the cycle can continue in the case of a cyclical control system. Following activation of the shut-off, the exhaust air/return air from the actuated valve is discharged. This takes place via an M5 threaded connection or via duct 3 in the case of width 18 and 26 mm, and via duct 3 in the case of width 42 and 52 mm.

Note

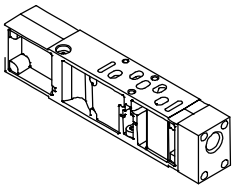
The operating pressure of the valve terminal must lie within the range of the required pilot pressure (i.e. min. 3 bar). When using the end plate with pilot air selector, only the switching position with the code W and U can be used.

Code		Type	Width				Description
			18 mm	26 mm	42 mm	52 mm	
ZT		VABF-S4...L1D1-C	■	■	–	–	• 3/2-way solenoid valve for shutting off the operating pressure at the valve position • Blocks ducts 1 and 14 for the valve position • Supplies the valve position with internal pilot air • Pressure separation at the valve assembly
		VABF-S2...L1D1-C	–	–	■	■	

Note

The vertical pressure shut-off plates VABF-... are provided only in combination with VSVA-...T1L solenoid valves from Festo. In the vertical pressure shut-off plate only ducts 1 and 14, and not duct 12, are blocked.

Vertical supply plate



This plate enables a valve to be supplied with individual operating pressure independently of the operating pressure of the valve terminal.

As additional pressure supply for a valve. To supply an additional pressure zone.

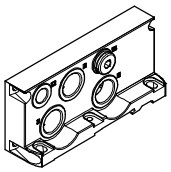
Code		Type	Width				Description
			26 mm	18 mm	42 mm	52 mm	
ZU		VABF-S-...P1A3-...	■	■	■	■	• Plate with port 11 for supplying individual operating pressure to a valve position, duct 1
ZV		VABF-S-...P1A14-...	■	■	■	■	• Plate with port 11 for supplying individual operating pressure to a valve position, ducts 1 and 14

Valve terminals VTSA/VTSA-F, NPT

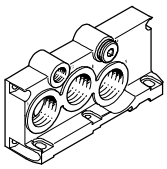
Key features – Pneumatic components

Compressed air supply and exhausting

Right-hand end plate, internal pilot air supply

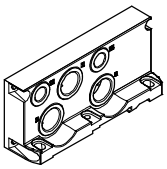


- Code V

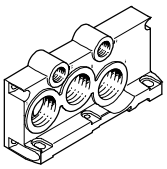


- Code V1, V3

Right-hand end plate, external pilot air supply

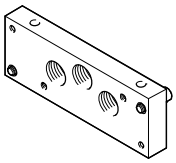


- Code X



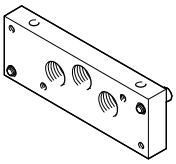
- Code X1, X3

Right-hand end plate, size ISO 3, internal pilot air supply



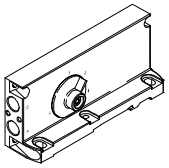
- Code V2, for width 65 mm

Right-hand end plate, size ISO 3, external pilot air supply



- Code X2, for width 65 mm

Right-hand end plate with pilot air selector



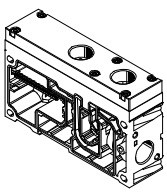
- Code Z, Y, W, U
  - Code Z: selector position 1, external pilot air supply
  - Code Y: selector position 2, internal pilot air supply
  - Code W: selector position 3, external pilot air supply (ducted)
  - Code U: selector position 4, internal pilot air supply (ducted)

The valve terminal VTSA/VTSA-F can be supplied with compressed air at one or more points. This is a reliable way of ensuring that all functional components will always offer good performance, even with large-scale extensions. The valve terminal is generally supplied via supply plates (max. 16 per valve terminal) and/or via the right-hand end plate. When using valves with a width of 65 mm, the compressed air can also be supplied and exhausted using the adapter plate VABA-....
Venting is via silencers or ports for ducted exhaust air on the supply plates and/or on the right-hand end plate.

Note

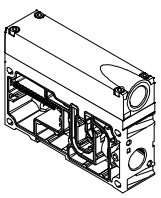
Compressed air supply and exhausting for size ISO 3 is described in a separate chapter on adaptation to width 65 mm (internal/external pilot air is regulated via MUH plate (solenoid valve)).

Supply plates, exhaust port 3/5 separated



- Code K

Supply plates, exhaust port 3/5 common



- Code L

Additional compressed air supply/duct separation

Additional supply plates can be used to ensure the compressed air supply for larger valve terminals or to create additional pressure zones.
These can be selected at any point upstream or downstream of the manifold sub-bases.

Supply plates contain the ports:
- Compressed air supply (1)
- Exhaust port (3/5) common or separated

Depending on your order, the exhaust air ducts are either ducted or exhausted via silencers.

VTSA/VTSA-F with ducted exhaust air:
With ducted exhaust air, venting can be via a supply plate or a right-hand end plate (code V or X).

If duct separation is required, there are three different options:
- Duct separation 1, 3, 5: code S
- Duct separation 1: code T
- Duct separation 3, 5: code R

If a combination of duct separation (S, T or R) and one or two supply plates is required, the following variants can be selected:
- Supply plate with duct separation on the left-hand side: code SU, TU, RU
- Supply plate with duct separation on the right-hand side: code US, UT, UR
- 2 supply plates with intermediate duct separation: code USU, UTU, URU

Supply plates

Code		Type	Width				Description
			18 mm	26 mm	42 mm	52 mm	
U		• Exhaust port 3/5 common VABF-S6-10-P1A7-G12 • Exhaust port 3/5 separated VABF-S6-10-P1A6-G12	■	■	■	■	Supply plate without duct separation (no R, S or T selected)
SU TU RU			■	■	■	■	Supply plate with duct separation on left, if R, S or T selected
US UT UR			■	■	■	■	Supply plate with duct separation on right, if R, S or T selected
USU UTU URU			■	■	■	■	2 supply plates with duct separation in centre, if R, S or T selected

Right-hand end plate

Right-hand end plates with different port sizes are available depending on the air rate required.

With the following right-hand end plates, the outlet direction of the ports is aligned with the horizontal stacking direction.
Right-hand end plates with pilot air supply/pilot exhaust air

- Internal pilot air supply: code V, V1, V2 and V3 (ducts 1 and 14 are connected)
- External pilot air supply: code X, X1, X2 and X3, as well as XP1, XP2, XP3 and XS

For end plates with pilot air selector, the outlet direction of the ports is to the front of the valve terminal. This means that all the ports on the valve terminal can be combined in one outlet direction.
The special feature of the end plates with pilot air selector is the selector switch itself, which has four settings for different pilot air supply/pilot exhaust air.

End plates with pilot air selector switch set at the factory for:

- External pilot air supply: selector position 1 (code Z)
- Internal pilot air supply: selector position 2 (code Y)
- External pilot air supply, ducted pilot exhaust air: selector position 3 (code W)
- Internal pilot air supply, ducted pilot exhaust air: selector position 4 (code U)

Note

- The end plate with pilot air selector must be used in combination with an air supply plate.
- The reversible 3/2-way solenoid valves (code P, Q, R) must only be operated in selector position 1 or 2.
- Ducted pilot exhaust air via port 12 is only possible with rotated seals on the valve.

Right-hand end plate, variants

Code	Blanking plug in duct	Pilot air supply	Ducted pilot exhaust air[1] Position of seal on solenoid valve ("~~ISO~~" is visible)	Connecting thread

XS[4]	14	External, via pilot air switching valve ("switchable pilot air")	–	½" NPT	¼" NPT

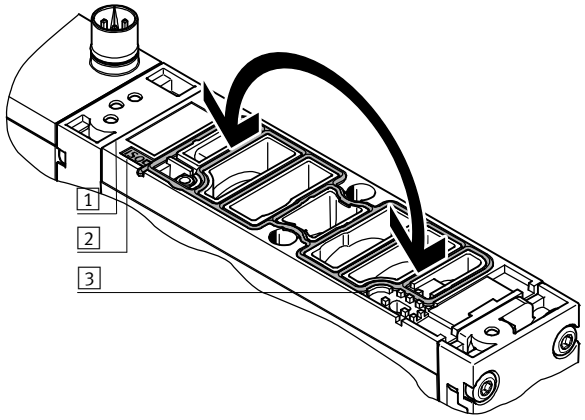
1) Pilot exhaust air is ducted on the end plate via port duct 12 and vented (done by turning the seal on the solenoid valve to position "ISO")
2) Not possible in combination with soft-start valve code PQ, PP, PO (with internal pilot air supply)
3) Not possible in combination with soft-start valve code PN, PM, PK (with external pilot air supply)
4) Only possible in combination with pilot air switching valve code SS with intermediate plate code ZO

Right-hand end plate with pilot air selector

Code	Pilot air supply	Selector position	Ducted pilot exhaust air[1] Position of seal on solenoid valve ("~~ISO~~" is visible)	Connecting thread 12, 14
Z	External	1	–	¼" NPT
Y	Internal	2	–	¼" NPT
W	External (ducted)	3	■	¼" NPT
U	Internal (ducted)	4	■	¼" NPT

1) Pilot exhaust air is ducted on the end plate via port duct 12 and vented (done by turning the seal on the solenoid valve to position "ISO")

Handling of the seals with ducted/unducted pilot exhaust air



Unducted pilot exhaust air:
- The seal is visible in the inspection window on control side 14.
- The "ISO" mark is visible on the designation label on the seal surface.

Ducted pilot exhaust air:
- The seal is visible in the inspection window on control side 12.
- The "~~ISO~~" mark is visible on the designation label on the seal surface.

1 Designation label
2 Inspection window on control side 14 ("ISO" is visible)
3 Inspection window on control side 12 ("~~ISO~~" is visible)

Pilot air supply

The port for the pneumatic supply is located on the supply plates or the right-hand end plate.

The ports differ for the following types of pilot air supply:
- Internal
- External

- Note

If a gradual pressure build-up is required in the system by means of a soft-start valve, then external pilot air should be selected whereby the pilot pressure is already applied at the point of switch-on.

Internal pilot air supply

Internal pilot air supply can be selected if the working pressure is between 3 and 10 bar.

In this case the pilot air supply is branched from the compressed air supply 1 using an internal connection. Port 14 on the right-hand end plate should be sealed with a blanking plug.

External pilot air supply

If the supply pressure is less than 3 bar, you must operate your valve terminal VTSA/VTSA-F using external pilot air supply.

The pilot air supply is then supplied via port 14 on the right-hand end plate. This is the case even if the valve terminal is operated with different pressure zones.

- Note

When using valves with a width of 65 mm, ISO size 3, the internal/external pilot air supply for the valves with a width of 18 ... 52 mm is provided via the adapter plate VABA-....
The external pilot air supply for the valves with a width of 65 mm is provided via the right-hand end plate IEPR ....

Right-hand end plate			
Code	Type of compressed air supply and pilot air supply		Description
Right-hand end plate (symbolic representation)			
V V1 V3 V2 (ISO3)			Internal pilot air supply • Pilot air supply is branched internally from port 1 • Port 14 is sealed • Exhaust air via ports 3 and 5 • For operating pressure in the range 3 ... 10 bar • Pilot exhaust air via port 12[1)] • V1 cannot be selected in combination with a soft-start valve in the last pressure zone
X X1 X3 X2 (ISO3)			External pilot air supply • Pilot air supply between 2 and 10 bar is connected at port 14 • Exhaust air via ports 3 and 5 • For operating pressure in the range –0.9 ... 10 bar (suitable for vacuum) • Pilot exhaust air via port 12[1)] • X1 cannot be selected in combination with a soft-start valve in the last pressure zone
XP1			External pilot air supply, pressure supply via soft-start valve[2)] • Port 1 is sealed with a blanking plug • Exhaust air via ports 3 and 5 • Pilot exhaust air via port 12[1)]
XP2			External pilot air supply, pressure supply via soft-start valve[2)] • Internal pilot air supply 14 via soft-start valve • Ports 1 and 14 are sealed • Exhaust air via ports 3 and 5 • Pilot exhaust air via port 12[1)]
XP3			External pilot air supply, pressure supply via soft-start valve[2)] • Internal pilot air supply 14 via soft-start valve • Ports 1, 3, 5 and 14 are sealed • Pilot exhaust air via port 12[1)]
XS			External pilot air supply via pilot air switching valve[3)] • Internal pilot air supply 14 via pilot air switching valve • Port 14 is sealed • Exhaust air via ports 3 and 5 • Pilot exhaust air via port 12[1)]

1) Ducted pilot exhaust air is only possible with rotated seals on the valve
2) Application with XP1, XP2, XP3 and soft-start valve in combination with valves of width 52 mm: please note the maximum flow rate of the soft-start valve in this pressure zone
3) Application with XS and pilot air switching valve in combination with intermediate plate

- Note

The key features, valves and functions of width 65 mm are described separately in the chapter "Adaptation to width 65 mm, ISO size 3 (technology type 04)" ➔ Page 165.

Right-hand end plate			
Code[1]	Type of compressed air supply and pilot air supply		Description
End plate with pilot air selector			
Z (1)			External pilot air supply • Pilot air supply is connected at port 14 • Port 12 is sealed with a blanking plug • Ports 12 and 14 are internally connected • Pilot exhaust air unducted via valve housing
Y (2)			Internal pilot air supply • Pilot air supply is branched internally from port 1 • Ports 1, 12 and 14 are internally connected • Ports 12 and 14 are sealed with blanking plugs • Pilot exhaust air unducted via valve housing
W (3)			External pilot air supply, ducted pilot exhaust air • Pilot air supply is connected at port 14 • Pilot exhaust air via port 12[2] • Cannot be selected in combination with a soft-start valve in the last pressure zone
U (4)			Internal pilot air supply, ducted pilot exhaust air • Pilot air supply is branched internally from port 1 • Ports 1 and 14 are internally connected • Port 14 is sealed with a blanking plug • Pilot exhaust air via port 12[2] • Cannot be selected in combination with a soft-start valve in the last pressure zone

1) Selector setting in brackets

2) Ducted pilot exhaust air is only possible with rotated seals on the valve (pilot exhaust air 82/84 including venting air for valves)

- Note

The reversible 3/2-way solenoid valves (code P, Q, R) must only be operated in selector position 1 or 2.

Configuration of all pneumatic connections with NPT thread

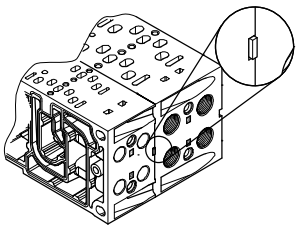
1) Selector setting in brackets

Creating pressure zones and separating exhaust air

The valve terminal VTSA/VTSA-F offers a number of options for creating pressure zones if different working pressures are required.
Pressure zones are created by isolating the internal supply ducts between the manifold sub-bases by means of appropriate duct separation.

Compressed air is supplied and exhausted via a supply plate.
The position of the supply plates and duct separations can be freely selected for VTSA/VTSA-F.

Duct separations are integrated ex-works as per your order.
Duct separations can be distinguished by their coding, even when the valve terminal is assembled.



Creating pressure zones

Code	Separating seal		Width				Description
	Illustrated examples	Coding	18 mm	26 mm	42 mm	52 mm	
T			■	■	■	■	Duct 1 separated
S			■	■	■	■	Ducts 1, 3 and 5 separated
R			■	■	■	■	Ducts 3 and 5 separated

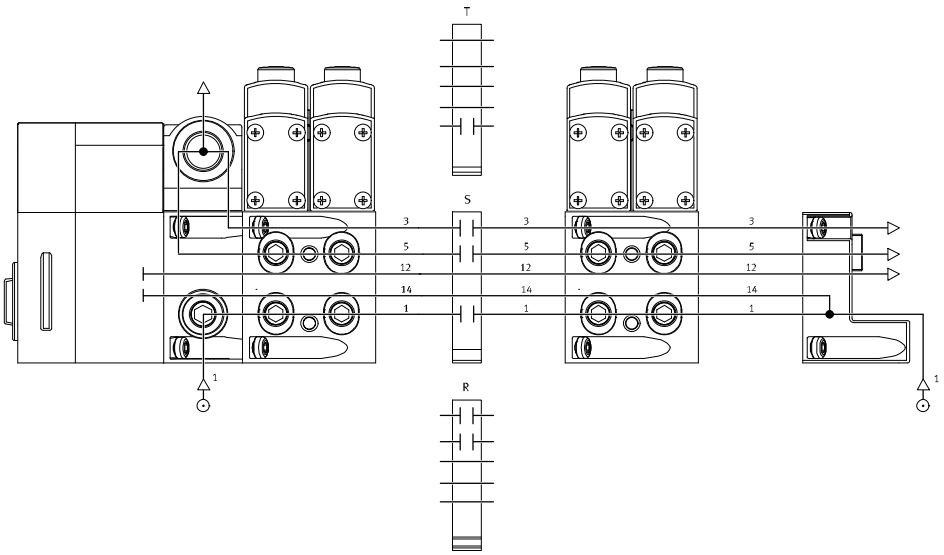
Examples: Compressed air supply and pilot air supply, right-hand end plate

Internal pilot air supply, silencer/ducted exhaust air

Right-hand end plate: code V and V1

The adjacent diagram shows an example of the configuration and connection of the compressed air supply with internal pilot air supply. Port 14 on the right-hand end plate is tightly sealed. At exhaust port 3/5 the air is discharged via the silencer.
Duct separations can optionally be used to create pressure zones.

Optional duct separation



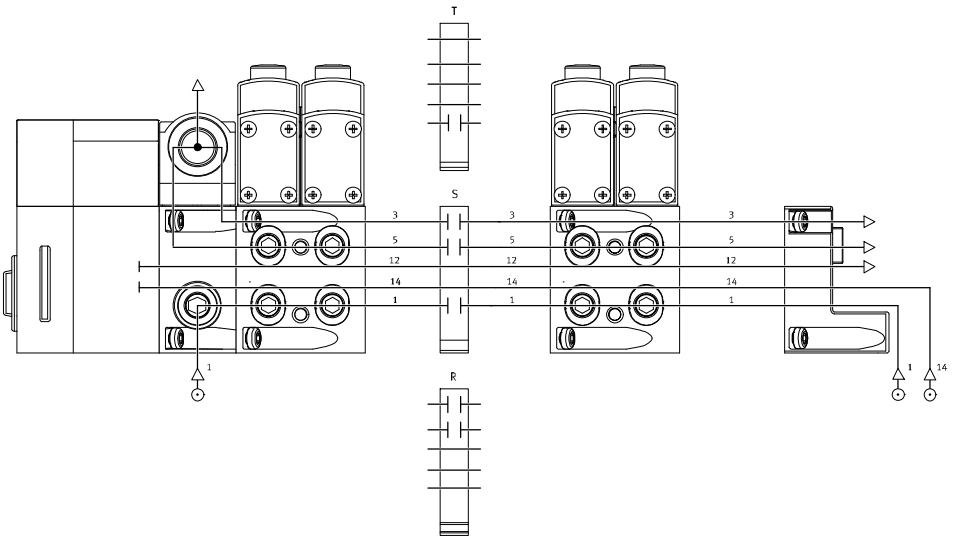
Examples: Compressed air supply and pilot air supply, right-hand end plate

External pilot air supply, silencer/ducted exhaust air

Right-hand end plate: code X and X1

The adjacent diagram shows an example of the configuration and connection of the compressed air supply with external pilot air supply. Port 14 on the right-hand end plate is equipped with a fitting for this. The air is exhausted via the silencer at exhaust port 3/5.
Duct separations can optionally be used to create pressure zones.

Optional duct separation



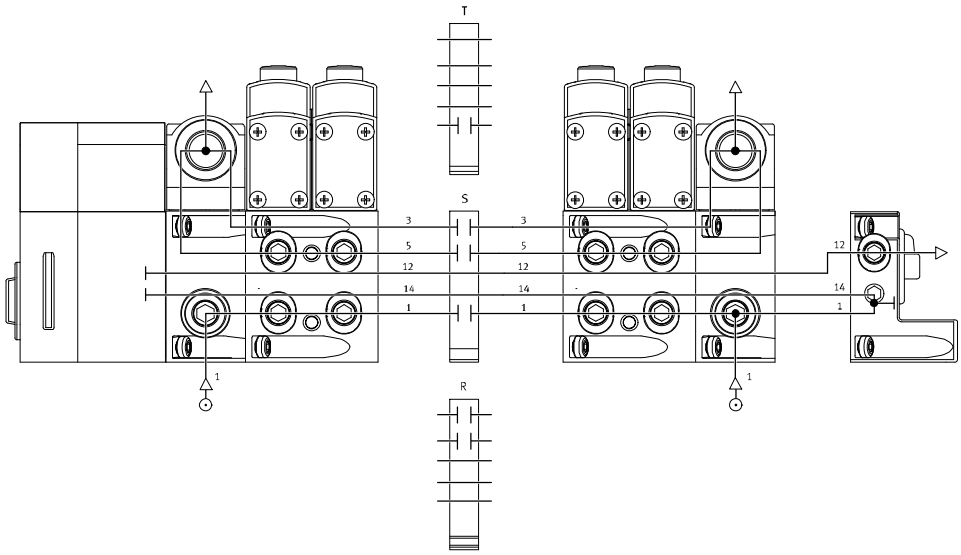
Examples: Compressed air supply and pilot air supply via end plate with pilot air selector

Internal pilot air supply, ducted exhaust air/silencer

Right-hand end plate: code U

The adjacent diagram shows an example of the configuration and connection of the compressed air supply with internal pilot air supply. Port 14 on the right-hand end plate is tightly sealed. At exhaust port 3/5 the air is ducted or discharged via the silencer. The selector switch on the pilot air selector is in position 4.
Duct separations can optionally be used to create pressure zones.

Optional duct separation

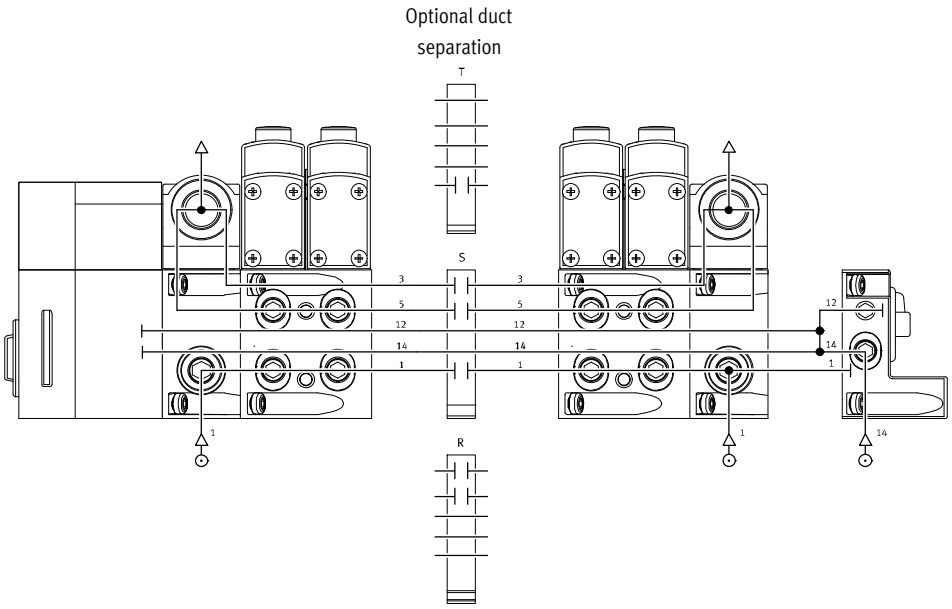


Examples: Compressed air supply and pilot air supply via end plate with pilot air selector

External pilot air supply, ducted exhaust air/silencer

Right-hand end plate: code Z

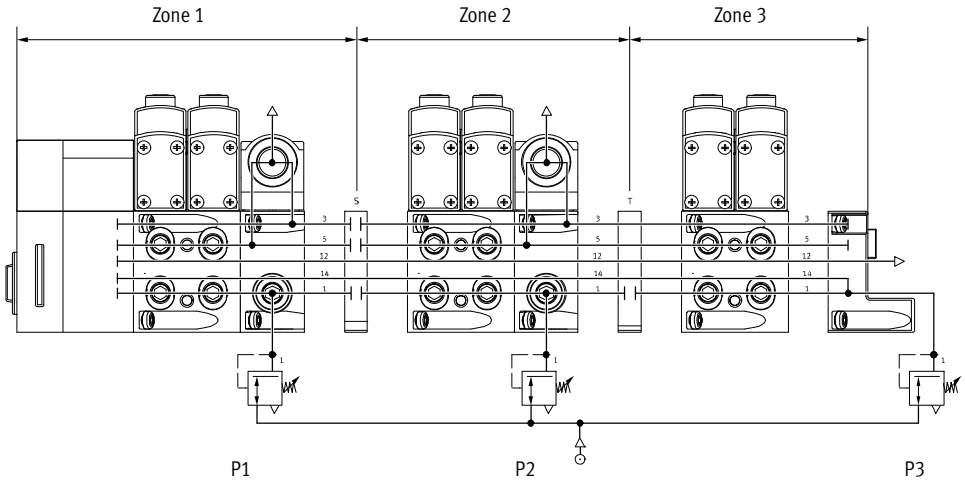
The adjacent diagram shows an example of the configuration and connection of the compressed air supply with external pilot air supply. Port 14 on the right-hand end plate is equipped with a fitting for this. Port 12 is sealed with a blanking plug since it is internally connected with port 14. At exhaust port 3/5 the air is ducted or discharged via the silencer. The selector switch on the pilot air selector is in position 1.
Duct separations can optionally be used to create pressure zones.



Examples: Creating pressure zones

VTSA/VTSA-F with CPX terminal

With the VTSA/VTSA-F, up to 16 pressure zones can be created (up to 32 pressure zones if only size 1, ISO 5599-2, is fitted). The diagram shows an example of the configuration and connection of three pressure zones using duct separations – with internal pilot air supply.



Note

Examples with pressure zones and soft-start valve are described separately in the chapter "Soft-start valve" ➔ page 155.

Valve terminal assembly

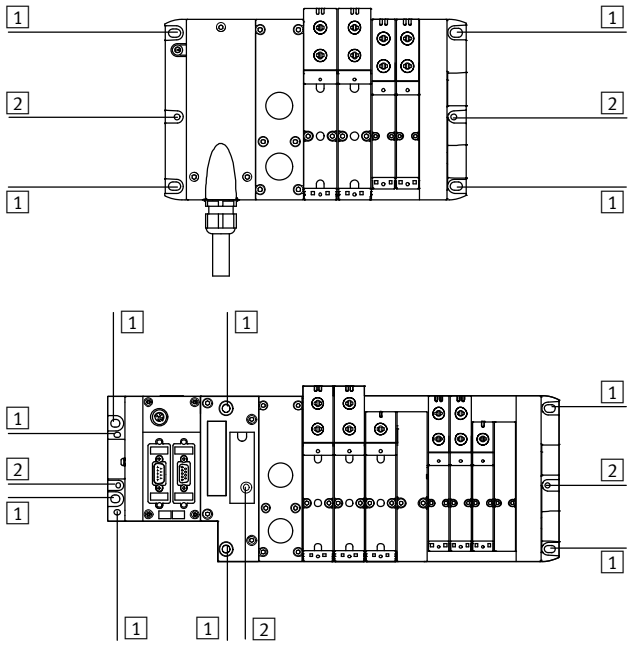
Sturdy valve terminal assembly thanks to:

- Through-holes for wall mounting
- Additional mounting brackets
- H-rail mounting (horizontal permitted mounting position)

- Note

Further information on installing the valve terminal, arranged by valve terminal configuration, can be found on the catalogue DVD or online.
➔ Internet: 2D/3D CAD
➔ www.festo.com/sp

Wall mounting, general



1 Hole for M6 screw
2 Hole for H-rail mounting

The valve terminal VTSA/VTSA-F is screwed onto the mounting surface using M6 screws. The mounting holes are located at the following points:

- Multi-pin plug (4 pieces):
  2 each on the multi-pin connection block and the right-hand end plate
- Fieldbus, CPX (6 pieces):
  2 each on the left-hand (CPX) and right-hand (VTSA/VTSA-F) end plate and the pneumatic interface.

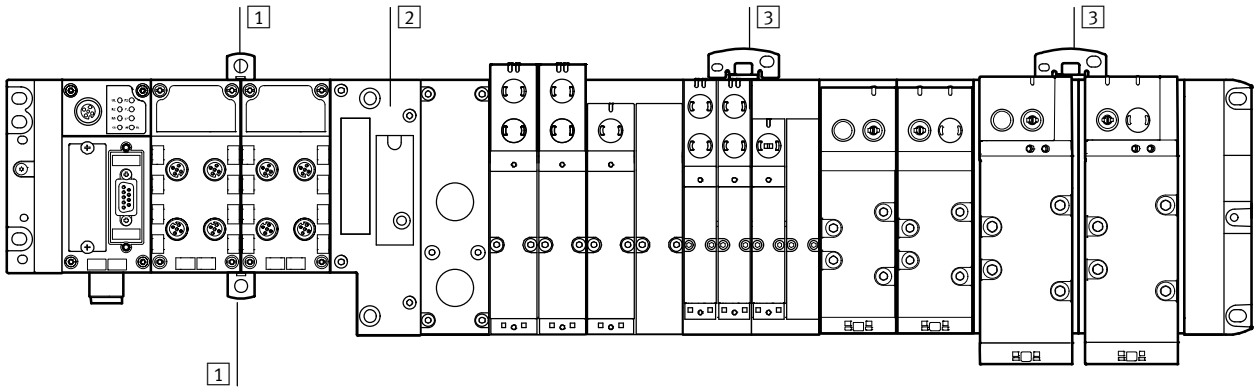
Mounting brackets can be mounted on pneumatic supply plates and manifold sub-bases.
If using CPX components, see:
➔ Internet: cpx

- Note

Wall mounting of the VTSA/VTSA-F with more than five pneumatic modules.
Note the following information to avoid damage to the valve terminal:

- Additionally use mounting brackets of the type VAME-S6-W-M46
- Mount these at each fourth plate (manifold sub-base, supply plate or exhaust plate), counting from left to right, starting after the pneumatic interface.
- No mounting bracket is required next to the right-hand end plate.
- Make sure to use the pre-assembled mounting brackets when mounting factory pre-assembled valve terminals on a wall.

Wall mounting with CPX polymer interface



1 Additional wall mounting for polymer CPX terminal

In the case of CPX terminals in polymer design with 4 and more interlinking blocks, additional wall mountings of the type CPX-BG-RW must be used approx. every 100 ... 150 mm. These mountings are clipped in at the top and bottom between the CPX modules.

2 Pneumatic interface

3 Additional wall mounting for VTSA/VTSA-F (with hole for M5 and M6 screw)

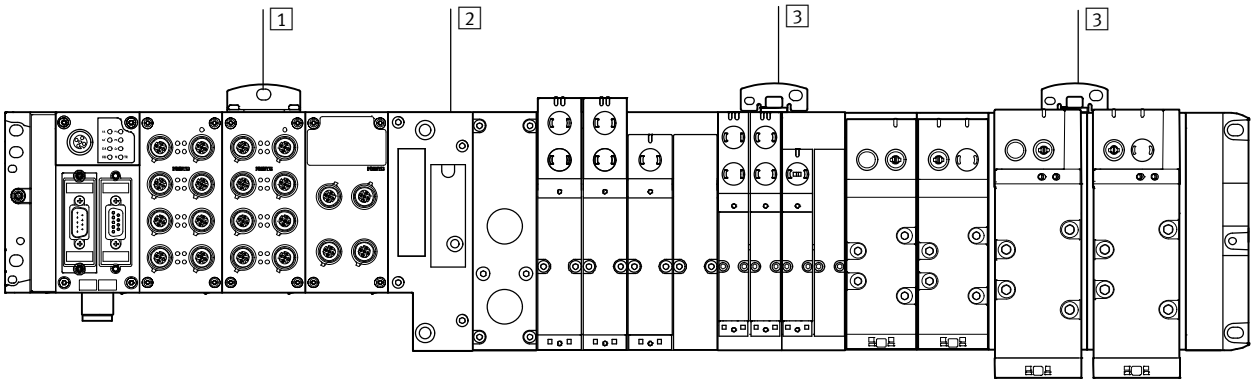
In the case of the VTSA/VTSA-F, mounting brackets must be mounted on the wall as instructed above.

Brackets of the type VAME-S6-W-M46 must be used as an additional wall mounting.

Valve terminals VTSA/VTSA-F, NPT

Key features – Assembly

Wall mounting with CPX metal interface



1 Additional wall mounting for metal CPX terminal

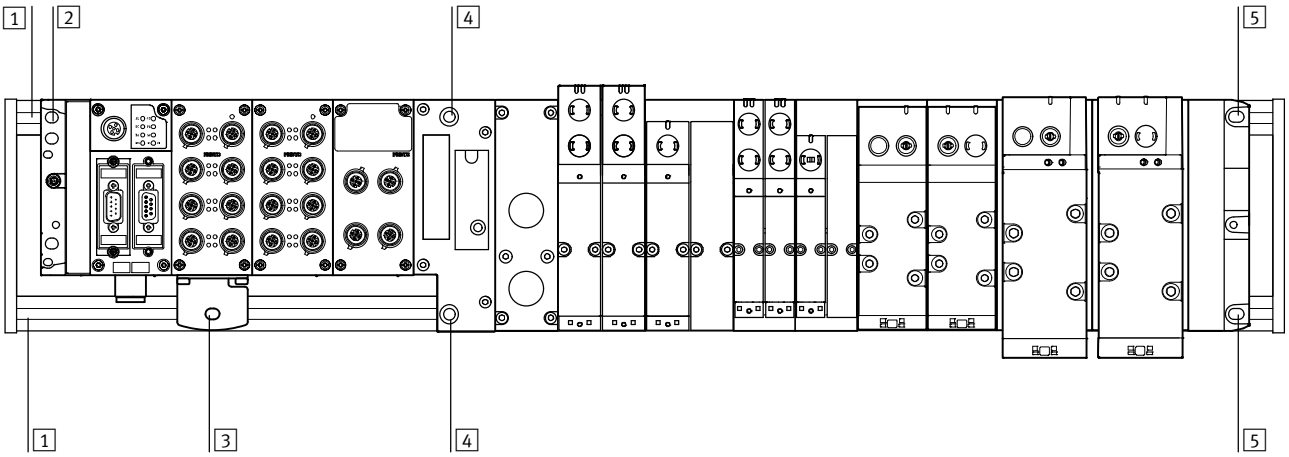
2 Pneumatic interface

3 Additional wall mounting for VTSA/VTSA-F (with hole for M5 and M6 screw)

In the case of CPX terminals in metal design with 4 and more interlinking blocks, additional wall mountings of the type CPX-M-BG-RW must be used approx. every 100 ... 150 mm. These wall mountings are screwed in at the top on the corresponding CPX module.

In the case of the VTSA/VTSA-F, mounting brackets must be mounted on the wall as instructed above.
Brackets of the type VAME-S6-W-M46 must be used as an additional wall mounting.

Mounting on support system with CPX metal interface



1 Support system (DIN mounting rail)

2 Upper mounting for CPX metal, left-hand end plate on DIN mounting rail

3 Lower mounting for CPX metal on DIN mounting rail with mounting bracket CPX-M-BG-VT-2X

4 Mounting for pneumatic interface on DIN mounting rail

5 Mounting for right-hand end plate on DIN mounting rail

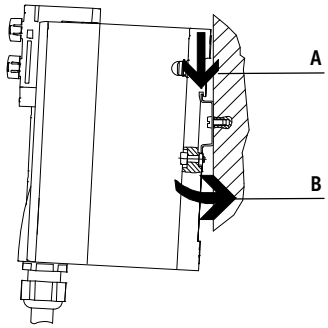
If a terminal CPX (metal version) with VTSA pneumatics is mounted on DIN mounting rails, it may be necessary to have one or more mounting brackets on the CPX side to compensate for the length. Length compensation is made possible by special mounting brackets CPX-M-BG-VT-2X. The mounting bracket connects the terminal CPX (metal version) to the DIN mounting rail.

Note

- Only CPX modules (metal version) with VTSA/VTSA-F modules of width 18 ... 52 mm may be used.
- The number of mounting brackets required depends on the number of CPX modules installed and whether any system feeds are present.

Further information about assembling the valve terminal can be found in the assembly instructions in the Festo Support portal.
➔ Internet: 2D/3D CAD
➔ www.festo.com/sp

H-rail mounting



The valve terminal VTSA/VTSA-F is hooked onto the H-rail (see arrow A). It is then swivelled onto the H-rail and secured in place with the clamping component (see arrow B).

For H-rail mounting of the valve terminal you will need the following VTSA/VTSA-F mounting kit:

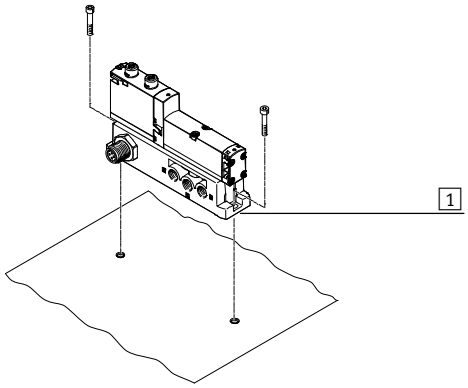
- CPX-CPA-BG-NRH

This enables the valve terminal to be mounted on an H-rail to EN 60715.

Note

- Wall mounting is recommended if more than one vertical stacking element or a long valve terminal design is required.
- Vibration/shock loads are not permissible with H-rail mounting.
- Only horizontal mounting position are permissible with H-rail mounting.

Individual valve mounting



1 Vertical mounting holes

The individual sub-base for wall mounting is designed for integration into a system or machine. It is mounted vertically.

New

Solenoid valve with pre-assembled cover cap

Valve terminals VTSA/VTSA-F, NPT

Key features – Display and operation

Display and operation

Each solenoid coil is allocated an LED which indicates its switching status.

- Indicator 12 shows the switching status of the pilot control for output 2
- Indicator 14 shows the switching status of the pilot control for output 4

Manual override (MO):

The manual override enables the valve to be switched when not electrically actuated or when de-energised.

The valve is switched by pushing the manual override. The set switching status can also be locked by turning the manual override.

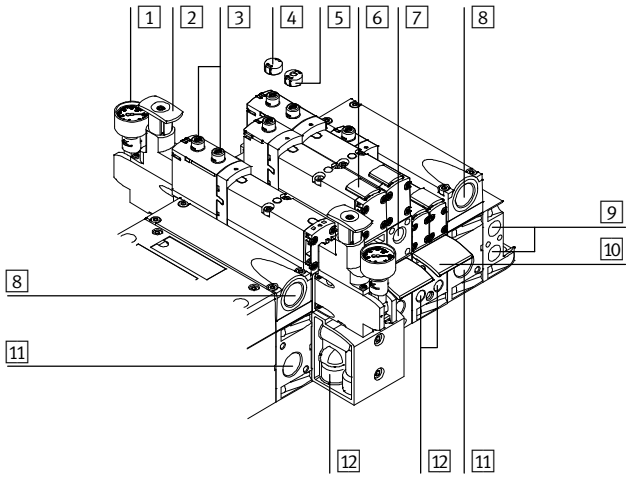
Alternatives:

- The cover cap (code N) limits the function of the manual override, preventing it from being locked. The valve can then be actuated with non-detenting operation only.
- The cover cap (code V) can be used to secure the manual override against accidental actuation.

Note

Special valve variants with pre-assembled cover caps for the manual override are available for valve terminal VTSA/VTSA-F.

Pneumatic connection and control elements

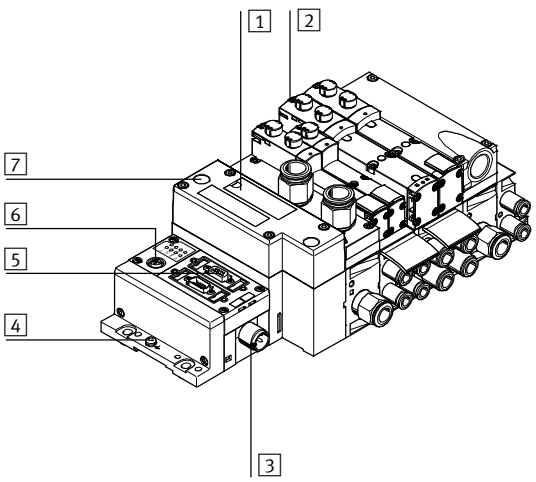


1 Pressure gauge (optional)
2 Adjusting knob for optional pressure regulator plate
3 Manual override (for each pilot solenoid coil, non-detenting or non-detenting/detenting)
4 Optional cover cap for manual override (prevents usage of manual override)
5 Optional cover cap for manual override with non-detenting function
6 Inscription label holder for valve
7 Adjusting screw of optional flow control plate
8 Exhaust ports "Valves" (3/5)
9 Pilot ports 12 and 14 for supplying external pilot air
10 Inscription label holder for sub-base
11 Supply port 1 (operating pressure)
12 Working ports 2 and 4, for each valve position

Note

A manually operated valve (manual override) cannot be reset electrically. Conversely, an electrically actuated valve cannot be reset using the mechanical manual override.

Electrical connection and display components



1 Inscription area and cover for H-rail mounting
2 Yellow LEDs: signal status display for pilot solenoid coils
3 Power supply connection
4 Earth terminal
5 Fieldbus connection (bus-specific)
6 Service interface for handheld unit, etc.
7 Red LED: common error display for valves

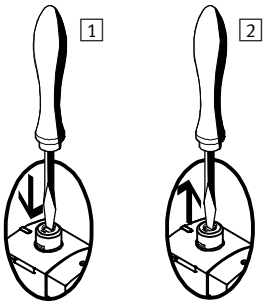
Valve terminals VTSA/VTSA-F, NPT

Key features – Display and operation

FESTO

Manual override (MO) – Function

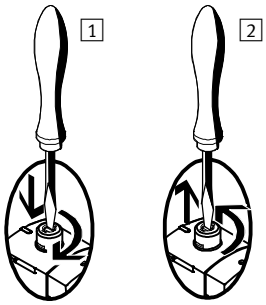
MO with automatic reset (non-detenting)



1 Press in the stem of the manual override using a pointed object or screwdriver.
The valve is in switching position

2 Remove the pointed object or screwdriver.
The spring force pushes the stem of the manual override back.
The valve returns to its initial position (not with double solenoid valve code J).

MO with detent (covered)

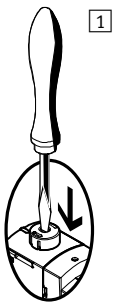


1 Press in the stem of the manual override using a pointed object or screwdriver until the valve switches and then turn the stem clockwise by 90° until the stop is reached.
The valve remains in switching position.

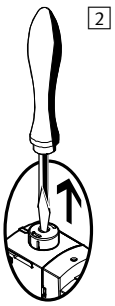
2 Turn the stem anti-clockwise by 90° until the stop is reached and then remove the pointed object or screwdriver. The spring force pushes the stem of the manual override back. The valve returns to its initial position (not with double solenoid valve code J and D).

Cover caps for manual override

Cover cap for MO, with automatic return (non-detenting)

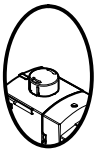


1 Limited function, non-detenting: push in stem of MO cap using a pointed object or screwdriver.
The valve is in switching position.



2 Remove the pointed object or screwdriver.
The spring force pushes the stem of the manual override back.
The valve returns to its initial position (not with double solenoid valve code J or D).

Cover cap for MO, covered



By covering the cover cap, the MO can be secured against accidental actuation.

Note

Cover caps for the manual override can be ordered separately as accessories.

There are also VSVA valve variants with pre-assembled cover caps.

New

Solenoid valve with pre-assembled cover cap

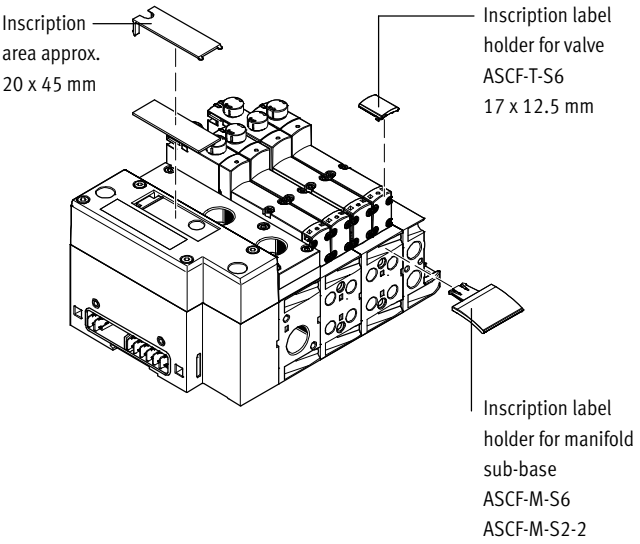
Valve terminals VTSA/VTSA-F, NPT

Key features – Display and operation

Overview of valve variants and MO caps				
Illustration	Terminal code	Description	Manual override	Valve code identification on rating plate sticker[1]
VSVA solenoid valve without cover cap				
	R	Without cover cap on MO	Non-detenting, detenting	... -MZD- ...
VSVA solenoid valve with pre-assembled cover cap on MO				
	C	MO with non-detenting operation only due to coded cover cap	Non-detenting	... -MZH- ...
	D	MO covered by cover cap – operation of MO prevented	Covered	... -MZ- ...
Cover caps for MO				
	N	MO with non-detenting operation only due to coded cover cap	Non-detenting	Not identified in valve code
	V	MO covered by cover cap – operation of MO prevented	Covered	Not identified in valve code

1) As an example here, the part code for a 5/2-way valve, single solenoid, reset by mechanical spring is used (e.g.: VSVA-B-M52-MZTR-A2-1T1L)

Identification system



Inscription label holders can be applied to the valves and manifold sub-bases to identify them. These inscription label holders can be ordered by entering the code B or T in the order code for accessories.
Scope of delivery: inscription label holder including inscription label.
The following inscription labels can be used as spares:

- Inscription label holder for valve type ASCF-T-S6: Part No. 540888
- Inscription label holder for manifold sub-base type ASCF-M-S6: Part No. 540889
- Inscription label holder for manifold sub-base (for valve width 52 mm)
  Type ASCF-M-S2-2 Part No. 562577

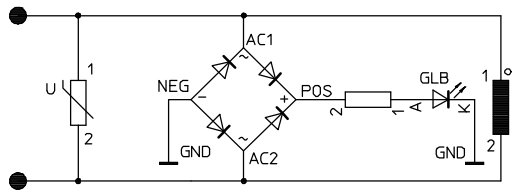
Large inscription labels can be attached to the pneumatic interface as an alternative or in addition to the smaller labels.

Protective circuit

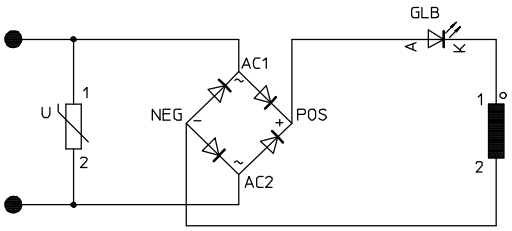
Each VSVA solenoid coil is provided with a spark arresting protective circuit and protected against polarity reversal.

The 24 V DC version of width 52 mm additionally features integrated holding current reduction.

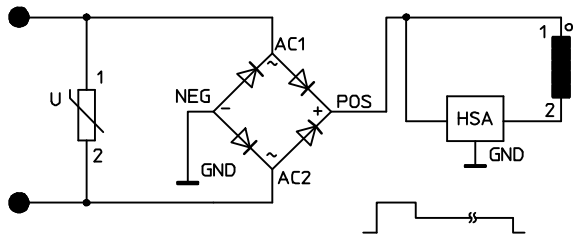
24 V DC version (width 18 to 42 mm)



110 V AC version (width 18 to 52 mm)



24 V DC version (width 52 mm)



Individual valve

Valves can also be used on individual sub-bases if actuators are further away from the valve terminal.

- Electrical connection M12, 4-pin 24 V DC
- 4-pin clamped terminal connection for configuration by the user 24 V DC or 110 V AC
- Cable (open end) for configuration by the user 24 V DC or 110 V AC

Individual electrical connection

A maximum of 20 solenoid coils can be actuated. 2 solenoid coils per valve can be addressed.

Individual electrical connection:

- M12
- 6-way or 10-way
- 5-pin
- 24 V DC

Valve terminals VTSA/VTSA-F, NPT

Key features – Electrical components

Electrical multi-pin plug connection

The following multi-pin plug connection variants are offered for the valve terminal VTSA/VTSA-F:

- Sub-D multi-pin plug connection (37-pin for 24 V DC): this valve terminal can be equipped with 1 ... 16 valve positions (with double solenoid valves) or with 1 ... 32 valve positions (with single solenoid valves). A maximum of 32 solenoid coils can be actuated.
- Terminal box (terminal strip for 24 V DC or 110 V AC): this valve terminal can be equipped with 1 ... 16 valve positions (with double solenoid valves), or with 1 ... 32 valve positions (with single solenoid valves). A maximum of 32 solenoid coils can be actuated.
- Multi-pin node (round plug connector): electrical multi-pin plug connection with round plug connector, 19-pin to CNOMO E03.62.530.N, connecting thread M23 for 24 V DC. The valve terminal can be fitted with max. 16 solenoid coils.

The valves are switched by means of positive or negative logic (PNP or NPN). Mixed operation is not permitted.

Each pin on the multi-pin plug (Sub-D) or terminal box (terminal strip) can actuate exactly one solenoid coil.
When using the maximum configurable number of 32 valve positions, 32 valves can be addressed, each with a single solenoid coil.
With 16 or fewer valve positions, 2 solenoid coils per valve can be addressed.

- Note

Use the following 37-pin connecting cables from Festo to connect the valve terminal VTSA/VTSA-F with Sub-D multi-pin plug connection:

- NEBV-S1W37-...-LE10 for max. 8 solenoid coils
- NEBV-S1W37-...-LE26 for max. 22 solenoid coils
- NEBV-S1W37-...-LE37 for max. 32 solenoid coils
- NECV-S1W37 plug connector for self-assembly

AS-Interface connection

Valve terminals VTSA/VTSA-F with AS-Interface connection can be extended with up to 8 valves with max. 8 solenoid coils.
The valve terminal with AS-Interface connection is based on the same electrical interlinking module as the valve terminal with multi-pin plug connection.
This means it is possible to convert a valve terminal with multi-pin plug connection using an AS-Interface module.
The technical specifications of the AS-Interface system must be observed in this case.

- Note

AS-i module VAEM-S6-S-FAS-4-4E.
Always operate the AS-i module with additional power supply if 4 solenoid coils (width 52 mm) are simultaneously supplied with current.
More information can be found at:
➔ Internet: as-interface

Fieldbus connection/control block

All functions and features of the electrical peripherals CPX are permitted in connection with the CPX interface. This means:

- The valves and electrical outputs are supplied via the operating voltage connection CPX
- The valves are supplied and switched off independently via a separate port on the CPX

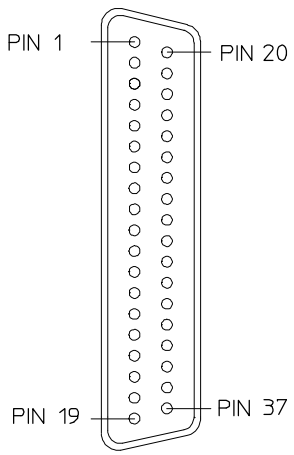
- Note

More information can be found at:
➔ Internet: cpx

Rules for addressing

Address allocation	Single solenoid valve	Double solenoid valve	
Address allocation does not depend on whether single or double solenoid valves are fitted. Addresses are allocated in ascending order without gaps, from left to right.	A valve position for actuating one solenoid coil (VABV...T1) occupies one address.	A valve position for actuating two solenoid coils (VABV...T2) occupies two addresses. The following assignment applies in this case:	• Coil 14: lower-value address • Coil 12: higher-value address

Pin allocation – Multi-pin plug, Sub-D socket, 24 V DC; electrical connection code MP1



Pin[2]	Address/coil	Wire colour[1]		Pin[2]	Address/coil	Wire colour[1]
1	0	WH		17	16	WH PK
2	1	BN		18	17	PK BN

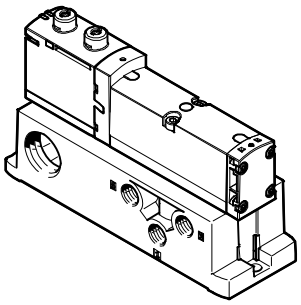
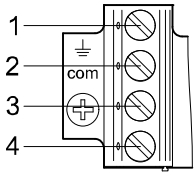
			19	Unused

1) Pin 6: 0 V for positive switching control signals; connect 24 V for negative switching control signals; mixed operation is not permitted.
Pin 12: earth
Pin 19: unused

Electrical connection, individual valve 24 V DC or 110 V AC up to width 52 mm





Pin allocation for assembly by the user

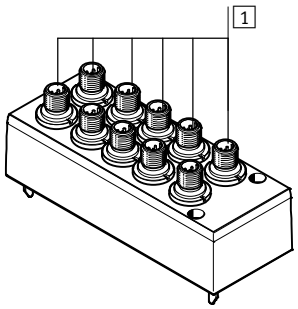
With positive logic:

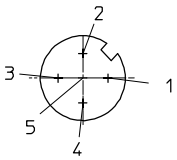
Pin1 – Unused (with 110 V AC connection for earthing)
Pin2 – U_B for coil 12
Pin3 – 0 V for coil 12 and 14
Pin4 – U_B for coil 14

With negative logic:

Pin1 – Unused
Pin2 – 0 V for coil 12
Pin3 – U_B for coil 12 and 14
Pin4 – 0 V for coil 14

Individual electrical connection, 6-way or 10-way, 24 V DC, code MP2/MP3 for valve terminal up to width 52 mm





Pin allocation M12

With positive logic:

Pin1 – Unused
Pin2 – U_B for coil 12
Pin3 – 0 V for coil 12 and 14
Pin4 – U_B for coil 14
Pin5 – Functional earth

Pin allocation M12

With negative logic:

Pin1 – Unused
Pin2 – 0 V for coil 12
Pin3 – U_B for coil 12 and 14
Pin4 – 0 V for coil 14
Pin5 – Functional earth

1 Connector plug M12x1, 5-pin

- Note

Mixed operation of positive switching (PNP) and negative switching (NPN) control signals is not permitted.

System equipment

Operate system equipment with unlubricated compressed air if possible. Festo valves and cylinders are designed so that, if used as intended, they will not require additional lubrication and will still achieve a long service life.
The quality of compressed air downstream of the compressor must correspond to that of unlubricated compressed air. If possible, do not operate all of your system equipment with lubricated compressed air. The lubricators should, where possible, always be installed directly upstream of the actuator used.

Incorrect additional oil and too high an oil content in the compressed air reduce the service life of the valve terminal.
Use Festo special oil OFSW-32 or the alternatives listed in the Festo catalogue (as specified in DIN 51524 HLP32; basic oil viscosity 32 CST at 40 °C).

Bio-oils
When using bio-oils (oils which are based on synthetic or native esters, e.g. rapeseed oil methyl ester), the maximum residual oil content of 0.1 mg/m^3 must not be exceeded (see ISO 8573-1:2010 Class 2).

Mineral oils
When using mineral oils (e.g. HLP oils to DIN 51524, parts 1 to 3) or similar oils based on poly-alpha-olefins (PAO), the maximum residual oil content of 5 mg/m^3 must not be exceeded (see ISO 8573-1:2010 Class 4).
A higher residual oil content irrespective of the compressor oil cannot be permitted, as the basic lubricant would be flushed out over time.

Valve terminals VTSA/VTSA-F, NPT

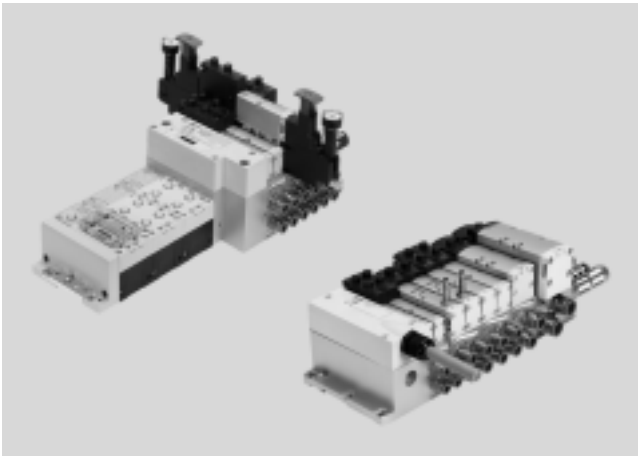
  Width 52 mm:
  up to 2900 l/min



1) Flow rates in brackets apply to VTSA-F

General technical data		
Terminal type VTSA/VTSA-F		VTSA is the standard type, VTSA-F is the type with optimised flow rate
Valve sizes		Widths 18 mm, 26 mm, 42 mm, 52 mm, extendable with adapter to 65 mm
Actuation type		Electrical
Electrical actuation		With multi-pin plug: multi-pin
		With fieldbus: integrated controller, fieldbus, Industrial Ethernet
Type of control		Piloted
Exhaust function, with flow control		Via flow control plate
Type of mounting		Wall mounting
		On H-rail to EN 60715
Mounting position		Any
Manual override		Detenting, non-detenting, covered
Suitable for vacuum		Yes
Valve terminal design		Modular, valve sizes can be mixed
Max. no. of valve positions		32[1)]
Pneumatic connections – NPT thread		
Pneumatic port		Via manifold sub-base
Supply port	1	Dependent on the end plate or air supply plate used (and adapter plate when using ISO size 3 valves)
Exhaust port	3/5	Dependent on the end plate or air supply plate used (and adapter plate when using ISO size 3 valves)
Working ports	2/4	Depending on the connection type selected
External pilot air supply port	14	Dependent on the end plate used (and adapter plate when using ISO size 3 valves)
Pilot exhaust air port	12	Dependent on the end plate used (and adapter plate when using ISO size 3 valves)

1) Dependent on the electrical interface and the manifold sub-bases used

Note: This product conforms to ISO 1179-1 and to ISO 228-1

Operating and environmental conditions		
Operating medium		Compressed air to ISO 8573-1:2010 [7:4:4]
Pilot medium		Compressed air to ISO 8573-1:2010 [7:4:4]
Notes about the operating/ pilot medium		Lubricated operation possible (in which case lubricated operation will always be required)
Operating pressure for valve terminal, pilot air supply[3]	[bar]	
• External		–0.9 ... +10
• Internal		3 ... 10
Pilot pressure	[bar]	3 ... 10
Noise level LpA	[dB(A)]	85
Ambient temperature	[°C]	–5 ... +50
Temperature of medium	[°C]	–5 ... +50
Storage temperature	[°C]	–20 ... +60
Relative humidity	[%]	90
Approval certificate		BIA
		C-Tick
		c UL us – Recognized (OL) (24 V DC only)
		CSA (OL)[4]
CE marking (see declaration of conformity)		In accordance with EU Low Voltage Directive (only VTSA/VTSA-F-MP, only 110 V AC)
		In accordance with EU EMC Directive[1]
		In accordance with EU Explosion Protection Directive (ATEX, EX1E[2])
ATEX category for gas		II 3G (EX1E[2])
Explosion ignition protection type for gas		Ex nA IIC T3 X Gc (EX1E[2])
Explosion-proof ambient temperature	[°C]	–5 ... +50 (EX1E[2])

1) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: www.festo.com/sp ➔ User documentation.
If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.
2) EX1E- approval certificate is only valid for: VTSA/VTSA-F-MP, VTSA/VTSA-F-FB
3) Solenoid valves with code VC (2/2-way type ... T22C), N (3/2-way type ... T32U), K (3/2-way type ... T32C), H (3/2-way type ... T32H) must not be operated with vacuum; operating pressure is 3 ... 10 bar here
4) Approval certificate is valid for VTSA/VTSA-F-MP, VTSA/VTSA-F-FB

Electrical data – Individual electrical connection		
Load voltage supply for valves (U_{val})		
Operating voltage	[V DC]	24 ±10%
Max. residual current at 24 V DC	[A]	10
Duty cycle		100%
Protection class		IP65, NEMA 4 (for all types of signal transmission in assembled state)

Electrical data – Multi-pin plug connection		
Load voltage supply for valves (U_{val})		
Operating voltage	[V DC] [V AC]	24 ±10% 110 ±10% (50 ... 60 Hz)
Max. residual current	[A]	6
Acceptable current load at 40 °C	[A]	1
Surge resistance	[kV]	1.5
Degree of contamination		3
Duty cycle		100%
Protection class		IP65, NEMA 4 (for all types of signal transmission in assembled state)

Electrical data – With CPX terminal		
Power supply for electronics ($U_{EL/SEN}$)		
Operating voltage	[V DC]	24 ±10%
Max. intrinsic current consumption at 24 V DC	[mA]	20
Duty cycle		100%
Load voltage supply for valves (U_{val})		
Operating voltage	[V DC]	24 ±10%
Diagnostic message undervoltage U_{OFF}, load voltage outside function range	[V]	21.6 ... 21.5
Protection class		IP65, NEMA 4 (for all types of signal transmission in assembled state)

Materials	
Manifold sub-base	Die-cast aluminium
Valve	Die-cast aluminium, PA
Seals	FPM, NBR, HNBR
Supply plate	Die-cast aluminium
Right-hand end plate	Die-cast aluminium
Pneumatic interface for CPX	Die-cast aluminium
Flow control plate	Die-cast aluminium
Pressure regulator plate	Die-cast aluminium, PA
Multi-pin connection block	Die-cast aluminium
Cover for the pneumatic interface and multi-pin plug connection	PA
Note on materials	RoHS-compliant

General technical data - Solenoid valves		
Design		Piston spool valve
Sealing principle		Soft
Type of reset		Mechanical or pneumatic, depending on type used
Actuation type		Electrical
Electrical connection		Plug to ISO 15407-2, 2-pin (single solenoid types) or 4-pin (double solenoid and 5/3-way types)
Type of control		Piloted
Protection class to EN 60529		IP65, NEMA 4 (for all types of signal transmission in assembled state)
Exhaust function, with flow control		Via individual sub-base, via flow control plate (not with valve type T22)
Type of mounting		On manifold sub-base, on individual sub-base
Mounting position		Any
Manual override		Detenting, non-detenting, covered
Switching status display		LED (except types with switching status display sensor, and part nos.: 560727 and 560728)
Switching status display sensor		Yellow LED
Duty cycle	[%]	100
Degree of contamination		3
Surge resistance	[kV]	2.5
Nominal operating voltage	[V DC]	24 (dependent on valve type)
	[V AC]	110 (dependent on valve type)
Permissible voltage fluctuations	[%]	±10
Pneumatic connections		
Supply port	1	Via the manifold sub-base of the valve terminal or via individual sub-base
Exhaust port	3/5	
Working ports	2/4	
Pilot air supply	12/14	
Pilot exhaust air port	82/84	Either ducted or unducted

Valve terminals VTSA/VTSA-F, NPT

Direction of flow of solenoid valves

Solenoid valves with reversible only flow direction

- These valves must only be operated on pressure zones with reversible supply (3 and 5 with supply pressure 1 as exhaust air) or on a reversible pressure regulator. If necessary create pressure separation zones with duct separation.
- Reversible 3/2-way solenoid valves do not permit the special function "ducted pilot exhaust air"
- Ports 12 and 14 on the end plate variants must be supplied with the same pressure
- Right-hand end plate with pilot air selector: can be realised via position 1 or 2
- Right-hand end plate with threaded connections: 12 and 14 must be supplied with the same pressure level

Solenoid valves with any flow direction

- Valves with any flow direction such as the 5/2-way solenoid valve, code M, for example, are suitable for vacuum operation (standard valves such as the 2x 2/2-way solenoid valve with code VC, for example, may not be used for vacuum operation).
- An exception is the 2x 2/2-way solenoid valve with code VV (T22CV), which only allows vacuum operation at ports 3 and 5. The solenoid valve with code VV (T22CV) cannot be combined with other valve functions; a separate pressure zone is required.

Operating and environmental conditions			
Operating medium			Compressed air to ISO 8573-1:2010 [7:4:4]
Pilot medium			Compressed air to ISO 8573-1:2010 [7:4:4]
Notes about the operating/pilot medium			Lubricated operation possible (in which case lubricated operation will always be required)
Operating pressure, pilot air supply[2]		[bar]	–0.9 ... +10 (valves with any flow direction and reversible valves)
			3 ... 10 (non-reversible valves)
Pilot pressure		[bar]	3 ... 10
Pilot air supply			External
			Internal via valve terminal
Ambient temperature		[°C]	–5 ... +50
Approval certificate			BIA (for characteristic SP and/or SN only)
	24 V DC		C-Tick (only size 52 mm and solenoid valve with sensor (position sensing))
			c UL us – Recognized (OL)
			CSA (OL)
			c CSA us (OL) (only valves of size 52 mm)
CE marking (see declaration of conformity)	110 V AC		In accordance with EU Low Voltage Directive (only VTSA/VTSA-F-MP)
	24 V DC		In accordance with EU EMC Directive[1]

1) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: www.festo.com/sp ➔ User documentation.
If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.

2) Solenoid valves with code VC (2/2-way type ... T22C), N (3/2-way type ... T32U), K (3/2-way type ... T32C), H (3/2-way type ... T32H) must not be operated with vacuum; operating pressure is 3 ... 10 bar here

Valve terminals VTSA/VTSA-F, NPT

Technical data – Solenoid valve, width 26 mm

- Valve width
  to ISO 15407-2
  26 mm

- Flow rate
  Valve width 26 mm:
  VTSA up to 1100 l/min
  VTSA-F up to 1350 l/min

- Voltage
  24 V DC
  110 V AC

Safety characteristics - Valve, width 26 mm		
Conforms to standard		EN 13849-1/2
Note on forced switch on/off		Min. 1/week
CE marking (see declaration of conformity)	110 V AC	To EU Low Voltage Directive
	24 V DC	In accordance with EU EMC Directive[1)] (only solenoid valves with sensor)
Shock resistance		Shock test with severity level 2, to EN 60068-2-27
Vibration resistance		Transport application test with severity level 2, to EN 60068-2-6

1) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: www.festo.com/sp ➔ User documentation.
If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.

1) If neither solenoid coil is energised, the valve assumes its mid-position by means of spring force.
If both solenoid coils are energised at the same time, the valve remains in the previously assumed switching position.

1) If neither solenoid coil is energised, the valve assumes its mid-position by means of spring force.
If both solenoid coils are energised at the same time, the valve remains in the previously assumed switching position.

Valve terminals VTSA/VTSA-F, NPT

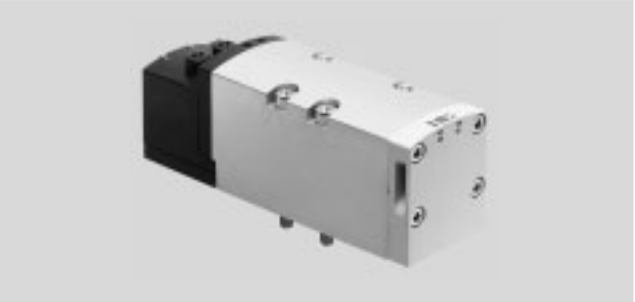
Technical data – Solenoid valve, width 52 mm

FESTO

- Valve width
  to ISO 5599-2
  52 mm (ISO 2)

- Flow rate
  Valve width 52 mm:
  VTSA up to 2900 l/min
  VTSA-F up to 2900 l/min

- Voltage
  24 V DC
  110 V AC



Safety characteristics - Valve, width 52 mm		
Conforms to standard		EN 13849-1/2
Note on forced switch on/off		Min. 1/week
CE marking (see declaration of conformity)	110 V AC	To EU Low Voltage Directive
	24 V DC	In accordance with EU EMC Directive[1)]
Shock resistance		Shock test with severity level 2, to EN 60068-2-27
Vibration resistance		Transport application test with severity level 2, to EN 60068-2-6

1) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: www.festo.com/sp ➔ User documentation.
If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.

1) If neither solenoid coil is energised, the valve assumes its mid-position by means of spring force.
If both solenoid coils are energised at the same time, the valve remains in the previously assumed switching position.

Coil characteristics, width 52 mm			
Valve function (with valve code)	Terminal code	Coil characteristics at 24 V DC in [W]	Coil characteristics at 110/120 V AC in [VA]
5/2-way, double solenoid (B52)	J	4.6	1.6
5/2-way, double solenoid with dominant signal (D52)	D	4.6	1.0
5/2-way, single solenoid (M52-A)	M	4.6	1.6
5/2-way, single solenoid (M52-M)	O	4.6	1.6
5/3-way, closed (P53C)	G	4.6	1.6
5/3-way, exhausted (P53E)	E	4.6	1.6
5/3-way, pressurised (P53U)	B	4.6	1.6
5/3-way, pressurised 1 to 2, 4 to 5 closed (P53F)	VG	4.6	–
2x3/2-way, single solenoid, closed (T32C)	K	4.6	1.0
2x3/2-way, single solenoid, open (T32U)	N	4.6	1.0
2x3/2-way, single solenoid, open/closed (T32H)	H	4.6	1.0
2x3/2-way, single solenoid, closed (T32N)	Q	4.6	1.0
2x3/2-way, single solenoid, open (T32F)	P	4.6	1.0
2x3/2-way, single solenoid, open/closed (T32W)	R	4.6	1.0
2x2/2-way, single solenoid, closed (T22C)	VC	4.6	1.0

Maximum current consumption per solenoid coil, width 52 mm		
At nominal voltage 24 V DC (valves with holding current reduction)		
Nominal pick-up current	[mA]	165
Nominal current following current reduction	[mA]	35
Time until current reduction	[ms]	30

Materials	
Housing	Die-cast aluminium, PA
Seals	HNBR, NBR, HNBR
Screws in	Galvanised steel
Note on materials	RoHS-compliant

Valve terminals VTSA/VTSA-F, NPT

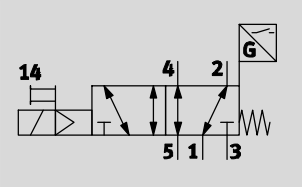
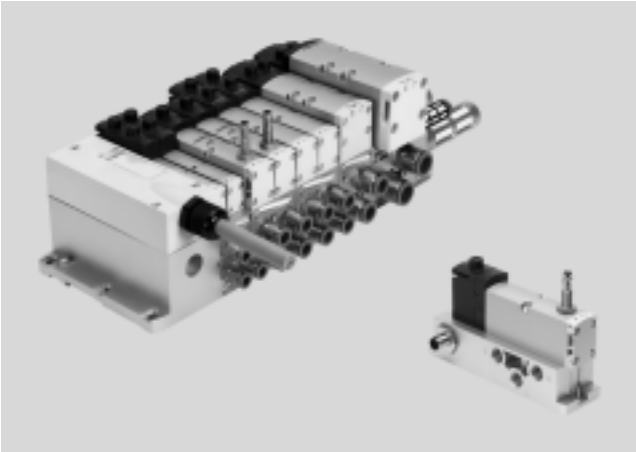
Technical data – Solenoid valve with switching position sensing

FESTO

Function[1)]



- Flow rate
  Up to 1100 l/min
- Valve width
  18 mm
  26 mm
- Voltage
  24 V DC
- Operating pressure
  3 ... 10 bar

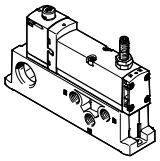


ISO valves with switching position sensing for safety-related pneumatic components

Function

The single solenoid 5/2-way valve with spring return in width 18 mm and 26 mm features valve diagnostics. Designed as a plug-in or individual connection valve with pilot valves to ISO 15218 and square plug type C. The normal position of the piston spool is monitored by the inductive sensor.
This valve is not a safety device in accordance with the Machinery Directive 2006/42/EC. When used in higher categories, the sensor signal from the valve must be evaluated by the control system.
This valve is suitable for use in safety-related parts of control systems to EN ISO 13849-1. The control block has been developed and manufactured in accordance with the basic and proven safety principles of EN ISO 13849-2. This valve is designed for installation in machines and automation systems and must only be used in industrial applications (high-demand mode).

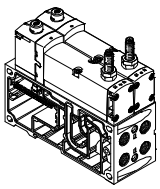
Decentralised individual connection variant



Valve on individual sub-base (square plug or plug-in), with integrated piston position sensing.

The electrical connection is established either via a standardised 4-pin M12 plug 24 V DC (ISO 15407-2), a 4-pin spring-loaded terminal or a cable (open end) 24 V DC/110 V AC, which are configured by the user. The individual sub-base can be supplied with internal or external pilot air depending on the version.

Variant for valve terminal VTSA/VTSA-F



The valves with integrated piston position sensing in plug-in design for valve terminal VTSA/VTSA-F can be used regardless of the type of electrical actuation (individual, multi-pin plug or fieldbus/control block connection).

Pilot air supply:
The valve terminal can be supplied with internal or external pilot air via the various end plate variants.

- Note

Valves in plug-in design always get their pilot air from duct 14 in the manifold sub-base.

1) The circuit symbol represents a valve with a proximity sensor with switching output signal with an N/O contact. In accordance with ISO 1219-1, this symbol applies to both N/O contacts and N/C contacts. The switching element function of the sensors used here is designed as an N/C contact.

- Note

Pilot exhaust air port 12 vents directly at the valve, without a connection.
If the customer requests a "turned seal", exhaust air is vented at the end plates of the valve terminal, which does not conform to the ISO standard.

Safety characteristics	
Conforms to standard	EN 13849-1/2
Note on forced switch on/off	Min. 1/week
CE marking (see declaration of conformity)	In accordance with EU EMC Directive[1)]
Shock resistance	Shock test with severity level 2, to EN 60068-2-27
Vibration resistance	Transport application test with severity level 2, to EN 60068-2-6

1) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: www.festo.com/sp ➔ User documentation.
If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.

Note

- The sensors contained in the valves must not be replaced by the customer. Incorrect assembly can result in malfunctions or damage to the valve. Return the module to Festo for repair in the event of a fault.
- Valves with switching position sensing from the series VSVA-B-M52-... can only be ordered individually. If these are used on a valve terminal, appropriate vacant positions must be provided for them. Exceptions are the two valves with ident. code SO and SQ.

Valve terminals VTSA/VTSA-F, NPT

Technical data – Control block with safety function

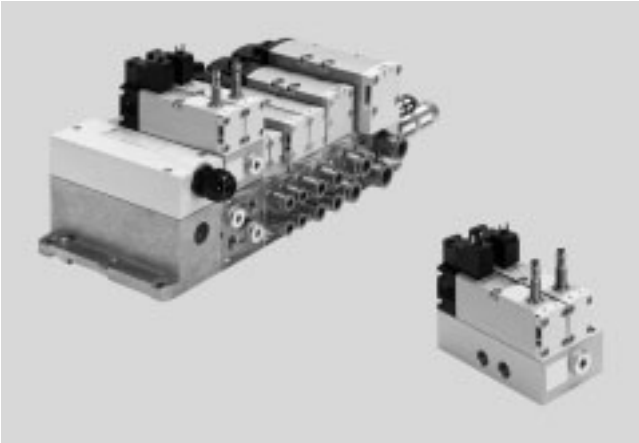
FESTO

- Flow rate
  on valve terminal:
  830 l/min

- Solenoid valve width
  26 mm

- Voltage
  24 V DC

- Operating pressure
  3 ... 10 bar



Description

The control block is designed for two-channel actuation of pneumatic drive components such as double-acting linear cylinders, for example, and can be used to realise the following protective measures:

- Protection against unexpected start-up (EN 1037)
- Reversing hazardous movements, provided the reversing motion will not result in further hazards

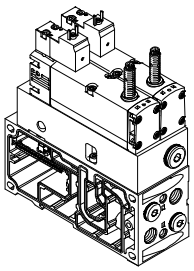
The control block has attributes for that enable Performance Level e to be achieved for the safety measures.
The control block has been developed and manufactured in accordance with the basic and proven safety principles of EN ISO 13849-1 and EN ISO 13849-2.

The requirements of EN ISO 13849-1 and EN ISO 13849-2 (e.g. CCF, DC) must be taken into consideration for implementation and operation of the component and for use in higher categories (2 to 4).
When using this product in machines or systems subject to specific C standards, the requirements specified in these standards must be observed.

The control block with safety function is designed for installation in machines and automation systems and must only be used in industrial applications (high-demand mode).
The control block with safety function is suitable for use as a press safety valve to EN 962.

More information and technical data
➔ Internet: user documentation

Version for valve terminal VTSA/VTSA-F



The valves with integrated piston position sensing on manifold sub-base for valve terminal VTSA/VTSA-F need to be supplied with electrical power regardless of the type of electrical actuation (individual, multi-pin plug or fieldbus/control block connection).

The electrical connection for the solenoid valves is established separately via a standardised square plug to EN 175301-803, type C.
The piston position sensing feature of the inductive PNP or NPN proximity sensor is realised using a push-in connector in the size M8x1 to EN 61076-2-104.

- Note

The appropriate manifold sub-base VABV-S4- ..., which is required for integration into the valve terminal, is not part of the control block. It is automatically allocated by the configurator on selection of the control block.

- Note

The control block with safety function (VOFA) is also available as a decentralised individual connection variant with electrical and pneumatic individual connection.
For information see:
➔ Internet: vofa

Pneumatic/electrical interlinking

Function

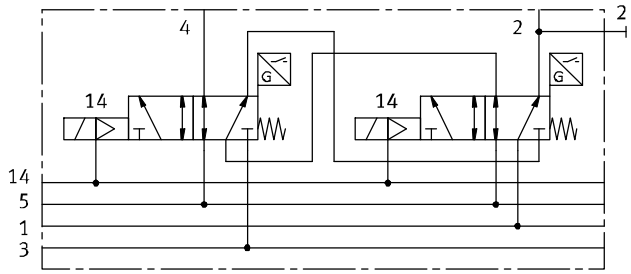
The safety function is achieved through two-channel pneumatic interlinking of two 5/2-way single solenoid valves within the control block: port (4) is only pressurised if both solenoid valves are switched to switching position (14).
Port (2) is always pressurised if at least one of the two solenoid valves is in normal position. The valve is reset via a mechanical spring.

The switching operation of the solenoid valves can be monitored by sensing via the proximity sensors at the solenoid valves (switching position sensing).
This is done by means of a logic operation of the control signal and the signal change of the proximity sensor to check whether the piston spools of the solenoid valves are reaching or leaving the normal position (expectations).

The piston spools of the solenoid valves are designed so that pneumatic short circuits between ports (2) and (4) are ruled out (freedom from overlap).

The two solenoid valves must be actuated via two separate ducts to achieve the desired category 4 (Performance Level e, to EN ISO 13849-1).

Circuit symbol[1)]



For the control block with safety function VOFA-B26-T52-... for the valve terminal, there is two-channel pneumatic interlinking of two 5/2-way solenoid valves, width 26 mm, with the intermediate plate as vertical stacking (output 2 is switched in parallel, output 4 is switched in series).

1) The circuit symbol represents a valve with a proximity sensor with switching output signal with an N/O contact. In accordance with ISO 1219-1, this symbol applies to both N/O contacts and N/C contacts. The switching element function of the sensors used here is designed as an N/C contact.

Safety characteristics

Conforms to standard	EN 13849-1
Safety function	Protection against manipulation, prevention of unexpected start-up
	Reversing a movement
Performance Level (PL)	Protection against manipulation, prevention of unexpected start-up (up to category 4, Performance Level e)
	Reversing a movement/to category 4, Performance Level e

Description

The pilot air switching valve is essentially a combination of a 5/2-way solenoid valve with switching position sensing and the intermediate plate VABF-S4-...-S. It enables verifiable switching on and off (sensor function) of the pilot air supply from duct 1 to 14 for the entire pressure zone or valve terminal.
This valve is not a safety device in accordance with the Machinery Directive 2006/42/EC. When used in higher categories, the sensor signal from the valve must be evaluated by the control system.
This valve is suitable for use in safety-related parts of control systems to EN ISO 13849-1. This valve is designed for installation in machines and automation systems and must only be used in industrial applications (high-demand mode).
More information and technical data
➔ Internet: user documentation

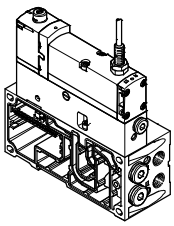
Alternative switching position sensing with pressure switch

As an alternative to the sensor function in the solenoid valve, a pressure switch can be mounted (instead of the blanking plug) in the intermediate plate VABF-S4-...-S. This pressure switch enables verifiable switching on and off (sensor function) of the pilot air supply. An ISO solenoid valve without a sensor can therefore be mounted on the intermediate plate for the same function.
➔ Internet: spba

- Note

The pilot air switching valve can only be operated on the valve terminal VTSA/VTSA-F in combination with a right-hand end plate for external pilot air type VABE-S6-1RZ-... . Port 14 on the right-hand end plate must be sealed for this.

Vertical stacking variant for valve terminal VTSA/VTSA-F, width 18 mm, 26 mm



The valves with integrated piston position sensing in plug-in design for valve terminal VTSA/VTSA-F can be used regardless of the type of electrical actuation (individual, multi-pin plug or fieldbus/control block connection).
This module is supplied pre-assembled together with the valve terminal VTSA/VTSA-F. No other assembly steps are required before installation. The piston position sensing feature is realised by means of an inductive PNP proximity sensor with cable and push-in connector in the size M12x1 to EN 61076-2-104.

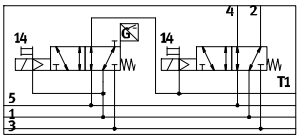
Alternatively, combinations with the pressure switch in the intermediate plate and ISO solenoid valves are possible.

- Note

All solenoid valves VSVA to ISO 15407-1 can be used.
➔ Internet: vsva

1) The circuit symbol represents a valve with a proximity sensor with switching output signal with an N/O contact. In accordance with ISO 1219-1, this symbol applies to both N/O contacts and N/C contacts. The switching element function of the sensors used here is designed as an N/C contact.

Function – Pneumatic/electrical interlinking



The function for switching off the pilot air is essentially achieved by combining the intermediate plate type VABF-S4-...-S with the 5/2-way single solenoid valve type VSVA-B-M52-MZD-...-1T1L-APX-0,5. The valve terminal is not supplied with any pilot air via the right-hand end plate type VABE-S6-1 (ident. code XS, external pilot air). Port 14 on the end plate is sealed.

The pilot air for the valve is branched from duct (1) in the intermediate plate and redirected to the pilot air duct (14) of the valve terminal when the valve is in the switching position. Ports (2) and (4) of the manifold subbase are sealed with blanking plugs. The switching operation of the solenoid valve can be monitored by sensing via the proximity sensor in the solenoid valve (or pressure switch in the intermediate plate VABF...).

This is done by means of a logic operation of the control signal and the signal change of the proximity sensor to check whether the piston spools of the solenoid valves are reaching or leaving the normal position (expectations).

The piston spool of the solenoid valve is designed so that pneumatic short circuits between ports (2) and (4) are ruled out (freedom from overlap).

Alternatively, combinations with the pressure switch in the intermediate plate and ISO solenoid valves are possible.

Note

A valve from the VTSA/VTSA-F modular system can be planned or configured to the right of the valve with piston position sensing on the intermediate plate of the pilot air switching valve.

Pilot air switching valve with integrated piston position sensing

The pilot air switching valve can be ordered as a combination of a 5/2-way solenoid valve with switching position sensing and the intermediate plate VABF-S4-...-S.

Alternative switching position sensing with pressure switch

As an alternative to the pilot air switching valve with integrated piston position sensing, a combination of ISO solenoid valve and pressure switch in the intermediate plate is possible.

Various 5/2-way solenoid valves are available in combination with a pressure switch SPBA-... for this purpose.

Safety characteristics	
Conforms to standard	EN 13849-1/2
Note on forced switch on/off	Min. 1/week
CE marking (see declaration of conformity)	In accordance with EU EMC Directive[1)]
Shock resistance	Shock test with severity level 2, to EN 60068-2-27
Vibration resistance	Transport application test with severity level 2, to EN 60068-2-6

1) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: www.festo.com/sp ➔ User documentation.
If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.

Valve terminals VTSA/VTSA-F, NPT

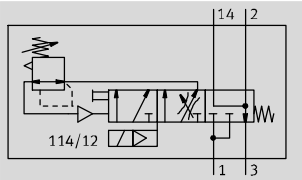
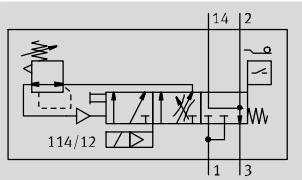
Technical data – Soft-start valve, width 43 mm

FESTO

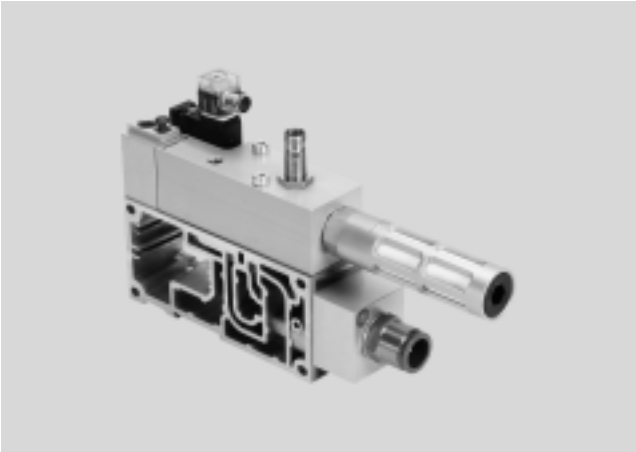
Function
without sensor



with sensor



- Flow rate
  Pressurisation: 3000 l/min
  Exhausting: 3300 l/min
- Module width
  43 mm
- Temperature range
  –5 ... +50 °C
- Operating pressure
  2 ... 12 bar



Description

Function

The purpose of the soft-start valve is to slowly and safely build up the supply pressure in duct 1 of the valve terminal or to quickly exhaust it.
Switch-on takes place in two stages:

- First the working pressure provided for duct 1 gradually increases (the speed can be adjusted using a flow control screw).
- Once the working pressure in duct 1 reaches a previously set value, the soft-start valve switches the full operating pressure at duct 1 of the valve terminal.

The switching point for full operating pressure is set to 4 bar at the factory, but can be changed using an adjusting screw.

The full operating pressure is applied to duct 14 (pilot air) at all times. This pressure causes the valves on the valve terminal to move immediately to the required switching position; no undefined status is possible.
Duct 1 of the valve terminal is exhausted via the soft-start valve's exhaust port only in the normal position, when the valve is not switched. The exhaust air can optionally be ducted with a QS fitting or using a silencer.
A detenting manual override with self-reset via an electrical control signal is available for maintenance and service purposes.

- Note

When using "Protection against unexpected start-up":
Protection against unexpected activation of the manual override (MO) must be guaranteed in all operating modes.

Diagnostics

The piston position of the soft-start valve can be monitored by a sensor with integrated LED display. This sensor registers whether the valve has switched and thus whether the valve terminal is being supplied with air.
Pressure sensing via a pressure gauge (optional) is also possible.

The soft-start valve can alternatively be ordered with a sensor. Due to the calibration that is required, there is no provision for subsequent retrofitting of a sensor.
Connecting cables with integrated LED display are provided for displaying the signal status.

Pilot air supply

The valve terminal can either be supplied with internal pilot air via the soft-start valve or with internal or external pilot air via the various end plate variants. The type of pilot air supply is determined by the seal of the soft-start valve.

The scope of delivery of the soft-start valve includes both the seal for internal pilot air supply (with hole) and the seal for external pilot air supply (without hole).

Creation of pressure zones with a soft-start valve

The soft-start valve can be used for the pneumatic compressed air supply of the valve terminal or of a pressure zone. The soft-start valve may only be used as the single compressed air supply component on valve terminals with a pressure zone or within a pressure zone.
If a soft-start valve in combination with a right-hand end plate (code XP3) is chosen for a pressure zone, a supply plate with a blanking plug in duct 1 (code W) is required in this pressure zone.
When using a soft-start valve, an air supply plate (with blanking plug in duct 1) is generally also required for this pressure zone for removal of the exhaust air (duct 3/5).
An air supply plate is not required if the exhaust air (duct 3/5) in a pressure zone with soft-start valve can be removed via the right-hand end plate.

Restrictions

Compressed air supply	Exhaust air	Pilot air supply	Reverse operation
There must be no other elements supplying compressed air in the pressure zone in which the soft-start valve is being operated.	Exhaust air cannot be discharged via the soft-start valve. If it is being used in a pressure zone with duct 3/5 separated, an exhaust plate is required.	If internal pilot air supply (duct 14) via the soft-start valve is chosen, there must be no other pilot air supply within the valve terminal.	The soft-start valve is not approved for reverse operation.

- Note

Setting options as well as drawings with descriptions of the components for the soft-start valve can be found in the user documentation. The adjusting screws are freely accessible in the built-in state.

General technical data	
Design	Piston spool valve
Actuation type	Electric
Sealing principle	Soft
Type of mounting	On sub-base, ISO size 1 to ISO 5599-2
Mounting position	Any

Materials – Soft-start valve	
Housing	Wrought aluminium alloy
Seals	NBR, HNBR
Screws	Galvanised steel

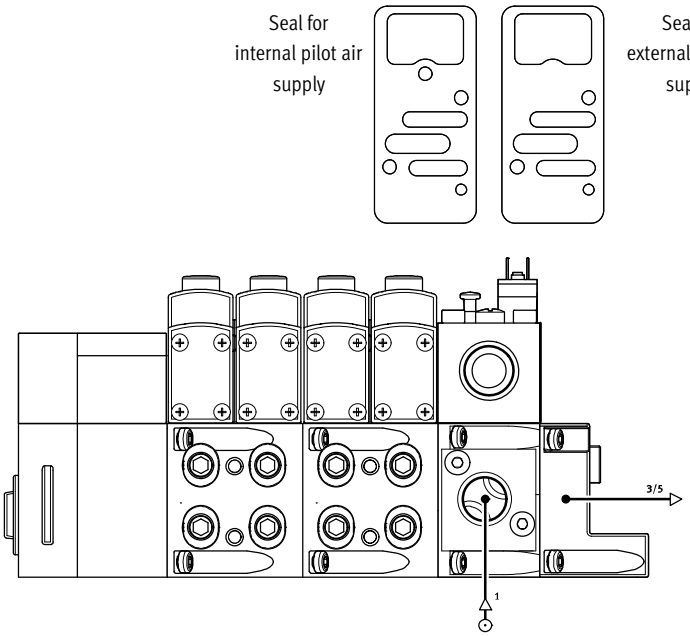
Example 1: Pressure zone with soft-start valve and pilot air supply

Internal, external pilot air supply

Requirements
- Compressed air supply via soft-start valve
- Right-hand end plate[1]: blanking plug in duct 1

For internal pilot air supply:
- Seal (soft-start valve - manifold sub-base) with pilot air supply hole "open" and
- Right-hand end plate: blanking plug in duct 14

For external pilot air supply:
- Seal (soft-start valve - manifold sub-base) with pilot air supply hole "closed" and
- Pilot air supply via duct 14 in the right-hand end plate



1) With this configuration, a right-hand end plate with pilot air selector is not possible, as it does not allow the discharge of exhaust air

Example 2: Pressure zone with soft-start valve, supply plate and pilot air supply

Internal, external pilot air supply

Requirements
- Compressed air supply via soft-start valve
- Supply plate: blanking plug in duct 1
- Right-hand end plate: blanking plug in duct 1, 3, 5 or
- Right-hand end plate with pilot air selector

For internal pilot air supply:
- Seal (soft-start valve - manifold sub-base) with pilot air supply hole "open" and
- Right-hand end plate: blanking plug in duct 14 or
- End plate with coding (position 2, internal pilot air supply)

For external pilot air supply:
- Seal (soft-start valve - manifold sub-base) with pilot air supply hole "closed" and
- Pilot air supply via duct 14 in the right-hand end plate or
- End plate with coding (position 1, external pilot air supply)

Valve terminals VTSA/VTSA-F, NPT

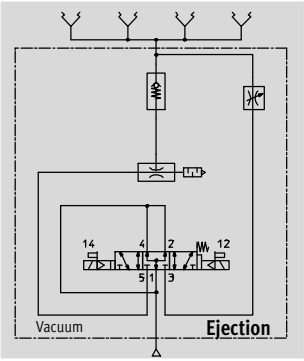
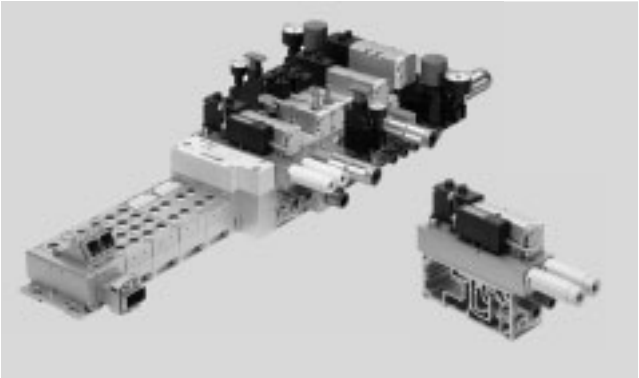
Technical data – Vacuum block

Function



- Width, vacuum block 53 mm
- Voltage 24 V DC
- Operating pressure 4 ... 8 bar



Description

The vacuum block can be integrated into the existing valve terminal VTSA/VTSA-F. To do this, the vacuum block is screwed to a manifold sub-base for 2 valve positions, width 26 mm. The vacuum block is used in conjunction with a suction gripper to pick up, hold and place components. Picking up and holding is carried out by means of a vacuum by a suction gripper. Once the component has been positioned, it is released by an an ejector pulse. This ejector pulse is created by pressurising the vacuum system so that the vacuum briefly breaks down. The ejector pulse is adjustable.

- Note

The vacuum block VABF-S4-1-V2B1 can be operated in combination with the vertical stacking for pilot air switch-off (intermediate plate VABF-S4-1-S plus 5/2-way valve) on the valve terminal VTSA.

Function

The intended use of the vacuum block VABF-S4-1-V2B10 ... is to generate a vacuum. The generated vacuum and a suction gripper produce a force by means of which a workpiece can be gripped and transported. The supply of compressed air for vacuum generation is controlled by a solenoid valve. The vacuum is generated by actuating solenoid coil 12.

The setpoint value set at duct B for the generated vacuum is monitored via a vacuum sensor (with switching output). Vacuum generation reverts to a self-latching loop phase after reaching the set reference value. The vacuum block controls the vacuum generation process independently within the range of the set switching points (air-saving function).

The integrated solenoid valve is used to generate an ejector pulse by activating coil 14. The workpiece is thus safely released from the suction and the vacuum is rapidly broken down. The length of the ejector pulse can be influenced by the duration of the electrical pulse. The strength of the ejector pulse is influenced by the adjustable flow control valve.

- Note

In the absence of electric or pneumatic supply when the valve is in the "create vacuum" or "air saving" state, the valve reverts to the "generate vacuum" position.

Operating mode of the air-saving function (LS)

If the desired threshold value (1) (turn off suction) is reached for the vacuum, vacuum generation is automatically switched off. Non-return valves prevent the reduction of the vacuum. Nonetheless, leakage (e.g. due to rough workpiece surfaces) will slowly reduce the vacuum. If the pressure drops below the set threshold value (2) (turn on suction), vacuum generation is switched on automatically. Vacuum is generated until the set threshold value (1) (turn off suction) is reached again.

Threshold value to switch off suction (air-saving function) (1):

The vacuum generator is switched off simultaneously with the setting of output Out A. The preset value is -700 mbar.

Threshold value to switch on suction (2):

The threshold value (2) should always be above the switching point of duct B (3) "vacuum sensing". The gap between (2) and (3) should be at least 50 mbar.

- Note

Setting options and further instructions are described in the operating instruction and/or documentation VABF-S4-1-V2B1... in the Festo Support Portal.

Valve terminals VTSA/VTSA-F, NPT

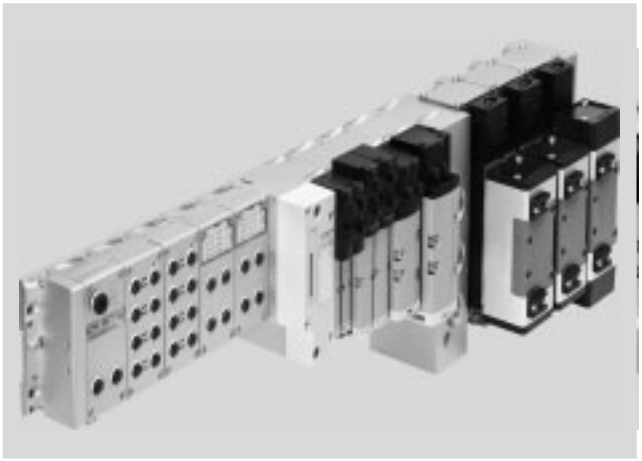
Adaptation to width 65 mm

- Valve width 65 mm
  ISO size 3
- Voltage
  24 V DC
- Flow rate
  Up to 4000 l/min
- Temperature range
  –5 … +50 °C
- Operating pressure
  –0.9 … 10 bar



Description

Function

The adaptation of valves, regulator and flow control plates of width 65 mm, ISO size 3 in type 04 technology further expands the scope of application of the valve terminal VTSA/VTSA-F:

- 5 valve sizes with pneumatic function integration on a valve terminal VTSA/VTSA-F.
- Max. flow rate up to 4,000 l/min.
- Max. 26 solenoid coils of width 65 mm, ISO size 3 can be adapted to the valve terminal VTSA/VTSA-F. The total number of solenoid coils of all widths must not exceed 32.

Restrictions

End plate with pilot air selector

If components of ISO size 3 are used, the end plate with pilot air selector is not available for selection.

Pilot air supply via adapter plate

If no pneumatic components are installed on the left-hand side of the adapter plate (electrical components only), ducts 12 and 14 of the adapter plate must be sealed with blanking plugs.

Pressure zones

Max. 2 pressure zones are possible with ISO size 3.

Valve terminals VTSA/VTSA-F, NPT

Key features – Adaptation to width 65 mm

Equipment options

Valve functions for width 65 mm, ISO size 3

- 5/2-way valve
  - Single solenoid, pneumatic spring/mechanical spring
  - Double solenoid
  - Double solenoid with dominant signal
- 5/3-way valve
  - Mid-position pressurised
  - Mid-position closed
  - Mid-position exhausted

Special features

Fieldbus connection/CPX terminal

- Max. 32 valve positions/ max. 32 solenoid coils
- Any compressed air supply
- Any number of pressure zones

Multi-pin plug connection

- Max. 32 valve positions/ max. 32 solenoid coils
- Parallel modular valve linking
- Any compressed air supply
- Any number of pressure zones

AS-Interface

- 1 to 8 valve positions/max. 8 solenoid coils. Auxiliary power supply is required.

Combinable

- Width 65 mm: valve flow rate up to 4000 l/min
- Width 18 mm, 26 mm, 42 mm and 52 mm can be combined on a single valve terminal. Width 65 mm is mounted at the end of the VTSA/ VTSA-F configuration via adapter VABA ....

Note

The total number of solenoid coils of all widths must not exceed 32.

Valve terminal configurator

➔ Internet: www.festo.com

A valve terminal configurator is available to help you select a suitable VTSA/VTSA-F valve terminal. This makes it much easier to order the right product.

The valve terminals are fully assembled according to your order specification and are individually checked. This reduces assembly and installation time to a minimum.

Order a valve terminal VTSA using the order code:

Ordering system for VTSA
➔ Internet: vtsa

Ordering system for CPX
➔ Internet: cpx

Order a valve terminal VTSA-F using the order code:

Ordering system for VTSA-F
➔ Internet: vtsa-f

Ordering system for CPX
➔ Internet: cpx

Note

Please note that despite the basic configuration for ISO size 3 valves

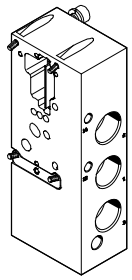
- the manual override is always non-detenting
- exhaust air 3/5 of the adapter plate for ISO size 3 is always routed separately
- there is no option for 90° connection plate, outlet at bottom
- there is no option for sintered silencers
- there is no option for pneumatic accessories

Valve terminals VTSA/VTSA-F, NPT

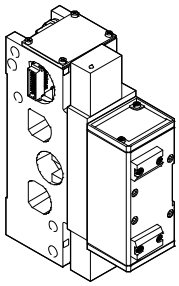
Peripherals – Pneumatic components, width 65 mm

Overview of modules for width 65 mm, ISO size 3

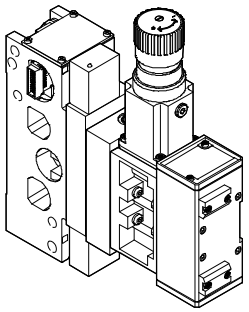
ISO 5599-2 size 3



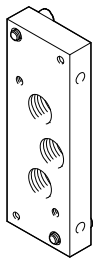
Adapter plate



Valve with manifold sub-base



Vertical stacking



End plate

Pneumatics

Pneumatic modules

- Manifold sub-base for ISO valves
- Size 3: (½" NPT) 4000 l/min

Adapter plate

- Pressure supply connection duct 1
- Exhaust connection duct 3/5 (separated)
- External pilot air supply connection (optional) for pneumatic components on the left-hand side

Pneumatic modules

- Manifold sub-base for one ISO valve
- Pilot control via intermediate solenoid plate
- ISO size 3

Vertical stacking

- Valves
- Flow control plates
- Intermediate pressure regulator plates
- Pressure gauge
- Creation of pressure zones with 10 bar or vacuum (with external pilot air supply only)

Information on valve activation for ISO size 3

- All intermediate solenoid plates feature a non-detenting manual override
- Valve terminals with internal pilot air supply: restricted pressure range
- Valve terminals with external pilot air supply: pressure zones up to 10 bar or vacuum operation possible. In this case, the pilot air supply must be regulated and supplied externally.

Additional modules

- Flow control plates: one-way flow control valves can be mounted between the manifold sub-base and the valve so that the speed of travel can be set separately for single and double-acting cylinders
- Pressure regulators: intermediate pressure regulator plates for setting the contact pressure of a cylinder, either separately on duct 1, 2 or 4, or shared by 2 and 4
- Pressure gauge on pressure regulator

Flexible compressed air supply

- Compressed air supply via the adapter plate or the right-hand end plate
- With large valve terminals, compressed air can be supplied at both sides
- Creation of pressure zones: maximum of 2 pressure zones, up to 10 bar as well as for vacuum, are possible for all valve sizes. Compressed air supply at both sides is essential in this case
- Regulated external pilot air supply should be used for pressures ‹ 3 bar

Options

- Vacant positions for subsequent extensions
- All pneumatic connections can also be supplied with a G thread

Pneumatic components of width 65 mm, ISO size 3

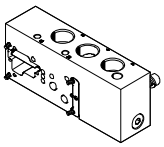
Valve terminals VTSA/VTSA-F, NPT

Key features – Pneumatic components, width 65 mm

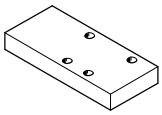
Key features – Pneumatic components

Adapter plate VABA ...



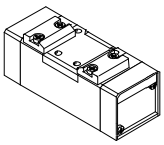
The adapter plate VABA ... is used for adapting of valves of width 65 mm ISO size 3 to valve terminal VTSA/VTSA-F. Connections for supply/exhaust air and pilot air supply are available. The external pilot air used here supplies the valve terminal with valves of width 18 ... 52 mm on the left-hand side of the adapter. The external pilot air supply for the valves with a width of 65 mm, ISO size 3 is provided via the end plate IEPR ....

Blanking plates



Blanking plates are used to seal off vacant valve positions. No intermediate solenoid plate is mounted underneath the blanking plate. This depends on the valve used and must be ordered with the valve if the terminal is extended at a later date.

Valves and pilot control



The valves used are pneumatically actuated standard valves that are controlled by means of an intermediate solenoid plate.

Valves and flow lines

The selection of pilot air supply is made at the intermediate solenoid plate by configuring two plugs. Air can be taken from the supply air, or from a separate air supply. A separate pilot air supply is required in principle if supply pressure is less than 3 bar (including vacuum). In this case it is advisable to restrict the pilot air supply to max. 10 bar with a suitable regulator.

Valve terminals VTSA/VTSA-F, NPT

Key features – Pneumatic components, width 65 mm

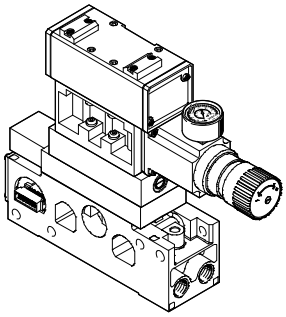
The following circuit symbols are shown as solenoid valves and are the combination (set) consisting of pneumatic valve with corresponding intermediate solenoid plate. The symbols printed on the components can therefore vary.

Valve function			
Terminal code	Circuit symbol	Width 65 mm	Description
O		■	5/2-way valve, single solenoid • With intermediate solenoid plate • Mechanical spring
–		■	5/2-way valve, single solenoid • With intermediate solenoid plate • Pneumatic spring
M		■	5/2-way valve, single solenoid • With intermediate solenoid plate • Pneumatic spring, air spring supplied by external pilot air
J		■	5/2-way valve, double solenoid • With intermediate solenoid plate
D		■	5/2-way valve, double solenoid • With intermediate solenoid plate • Dominant signal
G		■	5/3-way valve • With intermediate solenoid plate • Mid-position closed
E		■	5/3-way valve • With intermediate solenoid plate • Mid-position exhausted
B		■	5/3-way valve • With intermediate solenoid plate • Mid-position pressurised
L		■	Blanking plate

- Note

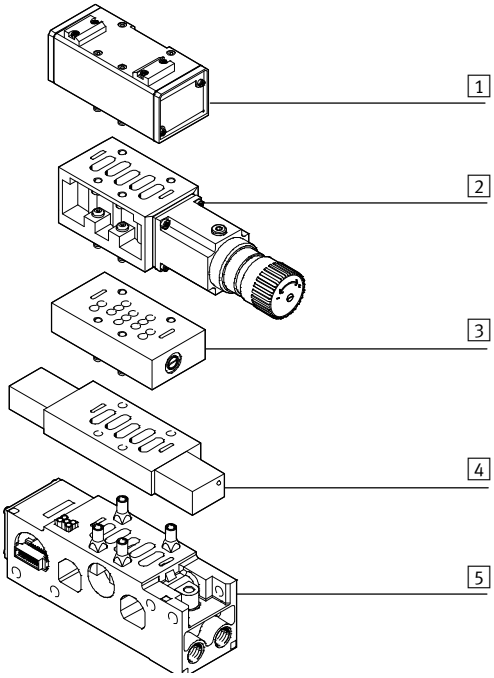
A filter must be installed upstream of valves operated in vacuum mode. This prevents any foreign matter in the intake air getting into the valve (e.g. when operating a suction cup).

Vertical stacking, width 65 mm



Additional components can be added to each ISO size 3 valve position between the sub-base (manifold sub-base) and the valve. These functions are known as vertical stacking modules and enable special functioning or control of an individual valve position.

Vertical stacking components



1 Valve ISO size 3
2 Intermediate pressure regulator plate
3 Flow control plate
4 Intermediate solenoid plate
5 Manifold sub-base with port pattern to DIN ISO 5599-2

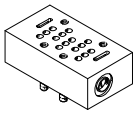
Note

Certain combinations are not possible due to the design of the individual vertical stacking components.

Valve terminals VTSA/VTSA-F, NPT

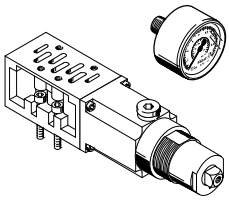
Key features – Pneumatic components, width 65 mm

Flow control plate, width 65 mm



Intermediate plate with integrated exhaust air restrictors at ports 3 and 5 for regulating cylinder speed.

Intermediate pressure regulator plate and pressure gauge, for width 65 mm



Intermediate plate with integrated pressure regulator for regulating pressure at

- Ports 2 and 4 (B, A)
- Port 4 (A)
- Port 2 (B)
- Port 1 (P)

Easy pressure adjustment
Pressure gauges can be screwed directly into the intermediate pressure regulator plate to adjust the pressure.

Functions

Code	Circuit symbol	Width 65 mm	Description
X		■	Flow control plate (with two one-way flow control valves for exhaust air flow control)

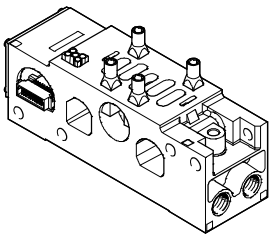
T		–	Pressure gauge for regulator, max. 10 bar
–		–	Pressure gauge for regulator, max. 16 bar

Valve terminals VTSA/VTSA-F, NPT

Key features – Pneumatic components, width 65 mm

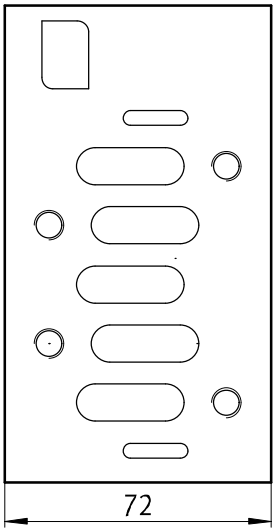
Manifold sub-base for valves, width 65 mm



Adaptation to size 65 mm ISO size 3 is based on a modular system which consists of manifold sub-bases and valves. The manifold sub-bases contain a duct seal and an electrical interlinking module, are screwed together and thus form the support system for the valves. Inside the manifold sub-bases are the connection ducts for supplying compressed air to and exhausting from the valves on the terminal as well as the working ports for the pneumatic cylinders for each valve.
Each manifold sub-base is connected to the next using two screws.

Individual valve terminal sections can be isolated and further manifold sub-bases inserted by loosening these screws. This ensures that the valve terminal can be rapidly and reliably extended, even for width 65 mm, ISO size 3.

Port pattern to ISO 5599-2 of the manifold sub-base for valves with width 65 mm

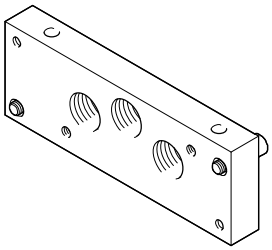


Valve terminals VTSA/VTSA-F, NPT

Key features – Pneumatic components, width 65 mm

Compressed air supply and exhausting

Right-hand end plate



With the adaptation to width 65 mm ISO size 3, compressed air is supplied via the right-hand end plate and/or the adapter plate VABA ....

Exhausting is via silencers or ports for ducted exhaust air on the adapter plate VABA ... and/or on the right-hand end plate.

The external pilot air supply for the valves with a width of 65 mm, ISO size 3 is provided via the end plate IEPR ....

Pilot air supply

When using valves with a width of 65 mm, the internal/external pilot air supply for the valves with a width of 18 ... 52 mm is provided via the adapter plate VABA-....
The external pilot air supply for the valves with a width of 65 mm is provided via the right-hand end plate IEPR ....

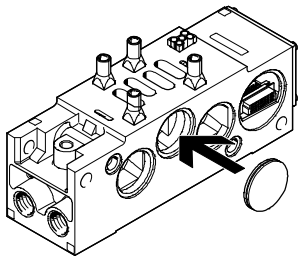
Internal pilot air supply
Internal pilot air supply can be selected if the working pressure is between 3 ... 10 bar.
The pilot air supply is then branched from the compressed air supply 1 using an internal connection. Ports 12 and 14 on the right-hand end plate are sealed with a blanking plug.

External pilot air supply
If the working pressure is not within the range from 3 ... 10 bar, you must operate the valves with a width of 65 mm, ISO size 3 using external pilot air supply. The pilot air supply is then supplied via ports 12 and 14 on the right-hand end plate.

Note

If a gradual pressure build-up is required in the system by means of an external soft-start valve, then external pilot air should be selected whereby the pilot pressure is already applied at the point of switch-on.

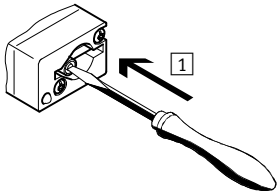
Creating pressure zones



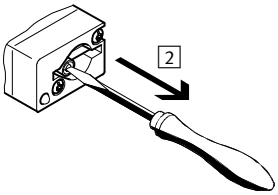
Different supply pressures are possible in the area containing the valves with a width of 65 mm by installing isolating discs between two manifold blocks. When doing this it should be noted that the isolating disc is inserted into the manifold sub-base from the right. The supply and exhaust is effected on the left-hand side via the adapter plate VABA ... and via the right end plate. Usually, only duct 1 has to be isolated. In special cases, isolating discs may also be inserted into exhaust ducts 3 and 5.

Manual override (MO)

MO with automatic reset (non-detenting)



1 Press in the stem of the manual override using a pointed object or screwdriver.
The valve is in switching position.



2 Remove the pointed object or screwdriver.
The spring force pushes the stem of the manual override back.
The valve returns to its initial position (not with double solenoid valve code J, D).

Electrical connection concept

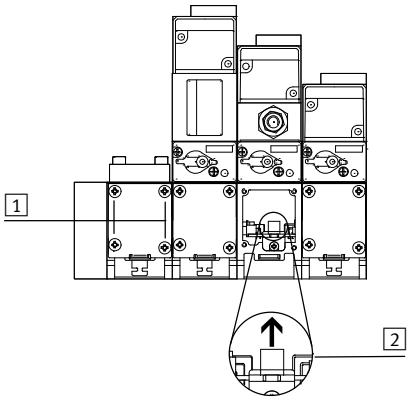
Replacing the solenoid coil fuse

Each solenoid coil is protected with a (fast-blowing) 0.315 A fuse. These fuses are located behind the cover of each manifold sub-base on the printed circuit board. Each single solenoid manifold sub-base has one fuse, while each double solenoid manifold sub-base has two fuses.

- - Note

Make sure that there is sufficient clearance for maintenance purposes.

Changing the solenoid coil fuse



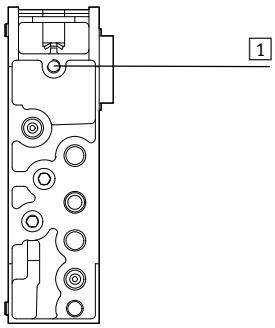
1 Loosen the fastening screws in the cover

2 Carefully remove the fuse from its base.
Right fuse for valve solenoid 14
Left fuse for valve solenoid 12

Valve terminals VTSA/VTSA-F, NPT

Key features – Assembly, width 65 mm

Rear side mounting

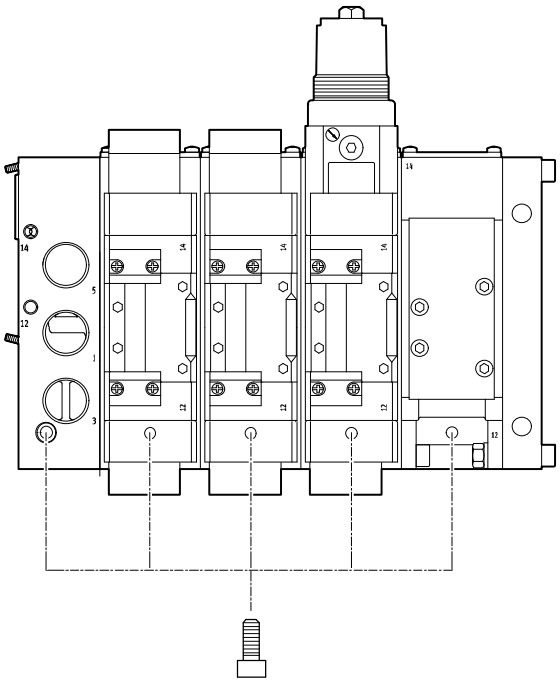


1 Blind hole for rear side mounting

The rear side of the manifold sub-bases has holes (blind holes) for mounting the valve terminal on machines or metal racks (rear side mounting).

M8 threads need to be cut for this purpose.

Wall mounting in the area of the adaptation to width 65 mm, ISO size 3



- With screws M8 on the adapter plate and the manifold sub-bases
- Holes (blind holes) on the underside of the manifold sub-bases

- Hole (through-hole) in the adapter plate

- Note

The mounting holes of every second manifold sub-base must be used for the wall mounting of a valve terminal VTSA-ASI in size ISO 3.

Pilot exhaust air port	12	10-32UNF-2B	⅛"NPT	⅛"NPT	⅛"NPT

Operating and environmental conditions, individual sub-base		
Operating medium		Compressed air to ISO 8573-1:2010 [7:4:4]
Notes about the operating/ pilot medium		Lubricated operation possible (in which case lubricated operation will always be required)
Operating pressure	[bar]	–0.9 ... +10
Ambient temperature	[°C]	–5 ... +50
Certification		c UL us - Recognized (OL)
CE marking (see declaration of conformity)		In accordance with EU Low Voltage Directive (not for VABS-S4...R3 and variants BB 52, VABS-S2-2S...)
Protection class		IP65, NEMA 4 (for all types of signal transmission in assembled state)

Valve terminals VTSA/VTSA-F, NPT

FESTO

Technical data – Valves on individual sub-base

Standard nominal flow rate of valve/individual sub-base [l/min], 24 V DC, 110 V AC				
Valve function (with valve code)	Width 18 mm		Width 26 mm	
	Valve	Valve on individual sub-base	Valve	Valve on individual sub-base
5/2-way, double solenoid (B52)	750	600	1400	1200
5/2-way, double solenoid with dominant signal (D52)	750	600	1400	1200
5/2-way, single solenoid, pneum. spring (M52-A)	750	600	1400	1200
5/2-way single solenoid, mech. spring (M52-M)	750	600	1400	1200

1) Switching position
2) Mid-position
3) The valve function P53F is only available in the 24 V DC version. Values only apply to 24 V DC.

Electrical data		
Acceptable current load at 40 °C	[A]	2 (1 A per coil)
Protection class to EN 60529		IP65, NEMA 4 (for all types of signal transmission in assembled state)
Variants with cable connector		
Operating voltage range	[V DC]	24 ±10% (for variants with cable terminal VABS-...-K1/C1, ...-K2)
	[V AC]	110 ±10% (50 ... 60 Hz) (for variants with cable and spring-loaded terminal VABS-...-K1/C1, ...-K2)
Surge resistance	[kV]	4
Degree of contamination		3
Duty cycle	[ED]	100%

Note

A cable connector is needed to ensure the IP protection class and to protect against tensile load, twisting and bending.

Valve terminals VTSA/VTSA-F, NPT
