Planar surface gantries EXCM

Key features

At a glance

General	Application examples
<ul style="list-style-type: none"> • Compact gantry distinguished by its high level of functionality in a very small installation space • The drive design minimises the moving mass • A perfectly matched drive and controller • The kinematic system is actuated via 2 stepper motors with integrated optical encoder (closed loop) and one matching two-axis controller 	<ul style="list-style-type: none"> • Can be actuated using two operating modes: <ul style="list-style-type: none"> – Direct mode via Ethernet and CAN – Record selection via digital I/O, Ethernet and CAN • EXCM-30 permits flexible motor mounting
<ul style="list-style-type: none"> • Feeding, pressing, joining components • Dispensing liquids • Mounting electronic components 	

Functional principle

A slide is moved in a two-dimensional space (X-axis/Y-axis) via a toothed belt. The system is powered via 2 fixed motors in position-controlled mode (closed loop). The motors are coupled to the toothed belt. The belt is guided via pulleys in such a way that the slide can approach any position in a working space when the motors are actuated accordingly.

Peripherals overview

Attachments and accessories			
Type	Description		→ Page/Internet
	For EXCM-10	For EXCM-30	
1 Profile mounting MUE	–	Included in the scope of delivery: • X stroke < 500 mm: 2 pairs • X stroke ≥ 500 mm: 3 pairs	23
2 Sensor mounting EAPR	–	For homing in combination with third-party motors	22
3 Proximity sensor SIES-8M	–		23
4 Drive package comprising controller, motor, motor cable	Included in the scope of delivery of the planar surface gantry	Available with or without drive package	11
5 Pilot line NEBC-S1H15	For I/O interface to any controller	For I/O interface to any controller	23
6 Plug	Included in the scope of delivery of the planar surface gantry	Included in the scope of delivery of the drive package	–

-  - Note
 Homing is always carried out using the mechanical stop in combination with the drive package from Festo; the sensor mounting and proximity sensor are not required in this case.

Planar surface gantries EXCM

Technical data

Characteristic load values

The indicated forces and torques refer to the slide surface. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect.

They are valid for $v = 0.2 \text{ m/s}$.

These values must not be exceeded during dynamic operation. Special attention must be paid to the cushioning phase.

If the axis is subjected to more than two of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads.

The limit values from the table "General technical data" must additionally be taken into consideration:

Calculating the load comparison factor:

$$f_v = \frac{|F_{z,dyn}|}{F_{z,max}} + \frac{|M_{x,dyn}|}{M_{x,max}} + \frac{|M_{y,dyn}|}{M_{y,max}} + \frac{|M_{z,dyn}|}{M_{z,max}} \leq 1$$

Permissible forces and torques

Size	10	30
$F_{z,max}$ [N]	150	1345
$M_{x,max}$ [Nm]	2	5.5
$M_{y,max}$ [Nm]	0.5	10.9
$M_{z,max}$ [Nm]	2	5.5

Feed forces [N]

Size	30						
Stroke of the Y-axis [mm]	110	160	210	260	310	360	
Travel in X direction	55	55	55	50	40	34	
Travel in Y direction	55	55	46	38	32	28	
Travel 45° diagonal	35	35	35	30	25	23	

Weight of the Y-traverse [g]

Size	30						
Stroke of the Y-axis [mm]	110	160	210	260	310	360	
Y-traverse	670	800	930	1070	1200	1330	

Note

The weight forces due to load when the gantry is mounted vertically must be taken into consideration in the

feed force. This is done by adding the weight of the Y-traverse to the load when the X-axis is vertical. The feed

force is reduced by the value of the weight force with vertical travel

upwards and increased with vertical travel downwards.

For EXCM-30: Calculating service life

The service life of the guide depends on the load. To provide a rough indication of the service life of the guide,

the graph below plots the load comparison factor f_v against the service life.

These values are only theoretical. You must consult your local contact per-

son at Festo for load comparison factors f_v greater than 1.5.

Load comparison factor f_v as a function of service life

Example:

A user wants to move an X kg load. Using the formula $\rightarrow 9$ gives a value of 1.5 for the load comparison factor f_v . According to the graph, the

guide would have a service life of approx. 1000 km. Reducing the acceleration reduces the M_z and M_y values. A load comparison factor f_v of 1 now gives a service life of 3500 km.

Applies only to EXCM-30!

Planar surface gantries EXCM

Technical data

EXCM-30 – Number of profile mountings

Different numbers of profile mountings must be used depending on the mounting position and stroke of the X-axis.

Horizontal mounting position
Stroke < 500 mm

Stroke \geq 500 mm

Vertical mounting position
Stroke < 500 mm

Stroke \geq 500 mm

Stroke of the X-axis [mm]	Number of profile mountings	
	Horizontal mounting position	Vertical mounting position
100 ... 500	2 per profile, inside or outside	4 per profile, inside and outside
500 ... 700	3 per profile, inside or outside	6 per profile, inside and outside

Product Range and Company Overview

A Complete Suite and Company Overview

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services

Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drivers

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 16,000 employees in 60 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
