

Valve terminals VTUB-12

FESTO

Valve terminals VTUB-12

Key features

FESTO

Innovative

- Cost-effective I-Port interface for fieldbus nodes (CTEU)
- IO-Link mode for direct connection to a higher-level IO-Link master
- Lower installation costs thanks to multi-pin plug connection
- Valve terminal for a wide range of pneumatic applications
- Minimal space requirement
- Great flexibility during planning, assembly and operation
- Pneumatic distributor integrated on the valve terminal
- Suitable for use in dusty environments

Versatile

- Room for expansion with up to 35 valve positions on one valve terminal
- Flexibility of the pneumatic working ports provides a practical solution to different requirements
- Quick and easy replacement of fittings
- Optional manifold rail variant with LED signal status display
- Wall or H-rail mounting
- Subsequently expandable to up to 18 pressure zones
- Additional supply possible when an increased air rate is required

Reliable

- Manual override
- Durable
- Sturdy thanks to the polymer housing and metal manifold rail

Easy to mount

- Ready-to-install and tested unit
- Lower ordering, installation and commissioning costs
- Wall or H-rail mounting
- Quick and secure installation thanks to integrated QS push-in connectors
- Easy valve assembly with just one screw

-  - Note

Equipment options

Valve functions

- 5/2-way valve, single solenoid
- 5/2-way valve, double solenoid
- 3/2-way valve, closed
- 3/2-way valve, open

Electrical connection options

Multi-pin plug

- Sub-D, 25-pin
- Sub-D, 44-pin
- 2 ... 35 valve positions/
max. 35 solenoid coils

I-Port

- Fieldbus connection (CTEU)
- IO-Link mode
- 3 ... 35 valve positions/
max. 35 solenoid coils

Valve terminals VTUB-12

Key features

FESTO

Pneumatic distributor

The pneumatic distributor supplies the operating pressure from port 1 to up to four other ports. The pneumatic

distributor has integrated QS4- or QS6 connections.

Note

Number of pneumatic distributors that can be used

→ P. 36 Pilot air supply

Selector plate/pilot control with external pilot air (optional)

The VTUB-12 is intended for use with internal pilot air. It can be operated with external pilot air by mounting the

selector plate VABF-C8-12-P6-...-Z instead of the blanking plate. The pilot

air is then supplied via port 12/14 on the selector plate.

Manifold rail with multi-pin plug connection

The manifold rail features a groove into which the semi in-line valves are latched and secured with just one screw.

The valve functions 3/2-way normally open or closed, 5/2-way single solenoid and 5/2-way double solenoid are available.

The valves can be supplied as semi in-line valves with cartridges QSP for tubing diameters 4 and 6 mm.

Manifold rail with optional LED signal status display

The manifold rail with multi-pin plug can optionally be ordered with LEDs (code L).

These indicate the signal states of the solenoid coils.

Manifold rail with I-Port interface

The manifold rail can be ordered with I-Port interface (code PT) and IO-Link (code LK) as a basis for fieldbus nodes

(CTEU) or in IO-Link mode for direct connection to a higher-level IO-Link master.

Valve terminals VTUB-12

Key features

Sub-base for semi in-line valve

The valve VUVB-12 can be operated as an individual valve using an individual sub-base (single width for single solenoid valves or

double width for double solenoid valves). The power is supplied via the connecting cable KMYZ and the

adapter (M8x1) with corresponding connecting cable (→ accessories, p. 36).

Blanking plate

Plate without valve function for reserving valve positions on a valve terminal.

Valves and blanking plates are attached to the manifold rail using one screw.

Power supply module

The power supply module occupies one valve position and can be used as an additional supply or for supplying a pressure zone.

The power supply module is attached to the manifold rail using one screw.

Separator for duct separation

Pressure zone separation can be realised in duct 1 in the manifold rail. Up to 18 pressure zones can be created on the valve terminal in this way.

There must be at least 2 valve positions between 2 separators.

Valve terminals VTUB-12

Key features

Integration of the I-Port interface/IO-Link

Different fieldbus nodes are used for integration into the control systems of various manufacturers.

The following protocols are supported with the compatible fieldbus node

CTEU:

- CANopen
- DeviceNet

- EtherCAT
- CC-LINK
- PROFIBUS

Use of the connecting block CAPC permits decentralised installation of bus nodes CTEU on a further valve terminal or input modules with I-Port interfaces (→ installation system CTEU/CTEL)

System overview, example

- Communication with higher-order controller via fieldbus
- Use fieldbus node CTEU compatible with the fieldbus protocol
- Up to 64 inputs/outputs (solenoid coils), depending on the valve terminal

Valve terminals VTUB-12

Peripherals overview

Overview – Valve terminal VTUB-12 with multi-pin plug connection, Sub-D

- Up to 20 valve positions/solenoid coils, 25-pin Sub-D multi-pin plug connection, code: M
 - From 21 valve positions/solenoid coils, 44-pin Sub-D multi-pin plug connection, code: M
- Valve terminals with electrical multi-pin plug connection are available with 2 to max. 35 valve positions.
- Each valve position can either be equipped with a valve, a power supply module or a blanking plate. Double solenoid valves occupy two valve positions.
- A maximum of 35 solenoid coils can be actuated via the electrical multi-pin plug connection. Up to 18 pressure zones are possible.

Valve terminals VTUB-12

Key features – Pneumatic components

Wide range of pneumatic components

- The use of the same basic valves for the 3/2-way and 5/2-way valve function permits fast and flexible conversion and multiple use of parts.
- Flexible construction thanks to assembled and tested units or individual components as modules for individual configurations.
- Flow rates from 230 ... 400 l/min depending on the valve used and appropriate QS connections.

Changing fittings on port 2/4

The cartridges (port 2/4) can be changed quickly and easily by removing the spring clip. The ports can be sealed by inserting a blanking plug (→ 37).

Connection to the valve

- T (on top, straight)
- TA (on top, angled outlet to the front)
- TB (on top, angled outlet to the front/rear)
- TC (on top, angled outlet to the rear)

Connection sizes:

- Push-in connector 4 mm (code P4)
- Push-in connector 6 mm (code P6)

Pilot air supply

Internal

The port for the pneumatic main supply is located on the left-hand sub-base (multi-pin plug connection/I-Port interface).

The internal pilot air (duct 12/14) is branched from duct 1 in the left-hand sub-base.

The air is branched using a pneumatic distributor or a blanking plate on the left-hand pneumatic distributor port. The multi-pin plug connection provides two pneumatic distributor ports and the I-Port interface provides one.

External

External pilot air is supplied via the selector plate on the left-hand pneumatic distributor port. It enables the pilot air and main supply to the valve terminal to be separated.

The multi-pin plug connection provides one pneumatic distributor port and the I-Port interface does not provide any.

Valve terminals VTUB-12

Key features – Pneumatic components

Creating pressure zones

Up to 18 pressure zones can be created using the separator VABD-C8 ... if different working pressures are required. The separators are inserted at the required location in duct 1 in the manifold rail and screwed into place. The following rules apply:

- Two pressure zones can be realised without an additional power supply module (VABF-C8 ...) if there is a

compressed air supply at both ends. Only one separator in duct 1 is required for this.

- A power supply module (VABF-C8 ...) is additionally required after the third pressure zone; this module occupies one valve position.
- There must be at least 2 valve positions between 2 separators.

Note

- Pressure zones can be freely configured with the VTUB-12.
- Duct separation does not result in any valve positions being lost; however, valve positions will be lost if an additional supply is required.
- If a valve terminal with duct separation is ordered via the configurator, the duct separation comes already labelled.
- Older manifold rails predating approx. mid-2013 cannot be retrofitted for the purpose of creating pressure zones.
- Further information on assembly → Assembly instructions for VABD-C8-P1-D2

Duct separation

Description

Duct separation and creation of pressure zones

- Remove the end plate
- Insert an Allen key (size 4) from above at the required position in duct 1 in the manifold rail as a stop
- Using another Allen key, push

separator VABD-C8 ... into duct 1 as far as it will go until it is in the appropriate position and then turn the Allen key to secure in place

- Fit the end plate
- Affix the enclosed symbol labels to the duct separation

Design

Valve replacement

The valves are attached to the aluminium manifold rail using one screw, which means that they can be easily

replaced. Use of high-quality polymer guarantees minimum weight and maximum performance.

Expansion

Blanking plates can be replaced by valves at a later date. The dimensions, mounting points and the pneumatic

installation already carried out do not change.

Valve function

Code	Circuit symbol	Width		Description
		12 mm	24 mm

Valve terminals VTUB-12

Key features – Display and operation

FESTO

Display and operation

- 1 Manual override (non-detenting, non-detenting/detenting)
- 2 Screw for valve assembly

The manual override enables the valve to be switched without electronic control or power supply.

Manual override

Manual override with automatic reset (non-detenting)

Press in the stem of the manual override with a pointed object or screwdriver.
 → The valve is switched.
 Remove the pointed object or screwdriver.
 Spring force pushes the stem of the manual override back.
 → Valve returns to normal position.

Manual override with lock (non-detenting/detenting)

Press in the stem of the manual override with a pointed object or screwdriver until the valve switches and then turn the stem clockwise by 90° until the stop is reached.
 → The valve remains switched.
 Turn the stem anti-clockwise by 90° until the stop is reached and then remove the pointed object or screwdriver. Spring force pushes the stem of the manual override back.
 → Valve returns to normal position.

-  - Note

A manually operated valve (manual override) cannot be reset electrically. Conversely, a solenoid actuated valve

cannot be reset using the mechanical manual override.

Valve terminals VTUB-12

Key features – Assembly

Valve terminal assembly

Sturdy valve terminal assembly thanks to:

- Through-holes for wall mounting
- H-rail mounting

Wall mounting

Sturdy terminal assembly thanks to four through-holes for wall mounting (M5 screws).

H-rail mounting

The H-rail mounting VAME-T-M5 consists of two mounting clips. These are attached to the manifold rail on the left and right (M5 screws). The lower through-holes on the manifold rail are used for this.

The valve terminal VTUB-12 prepared in this way is lowered onto the H-rail from above (arrow A) and clipped into the H-rail at the bottom (arrow B).

Note

- Note the max. tightening torque of 2 Nm ($\pm 25\%$) for the screws for mounting the H-rail.
- Only horizontal H-rail mounting is permissible.
- Mounting only possible on H-rail TH 35-15 to EN 50022.
- Vibration/shock loads are not permissible with H-rail mounting.

Valve terminals VTUB-12

Key features – Electrical components

Multi-pin plug connection

Control signals from the controller to the valve terminal are transmitted via a pre-assembled multi-core cable, which substantially reduces installation time.

This valve terminal can be equipped with 2 ... 35 valves.

Versions

- Sub-D connection

I-Port interface/IO-Link

IO-Link

IO-Link is an interface that supplies data for communication in addition to the power supply.
An IO-Link system consists of an IO-Link master and IO-Link devices. The IO-Link master offers the interface to the higher-order controller (PLC) and controls communication with the connected IO-Link devices.

One device with IO-Link (e.g. an IO-Link valve terminal from Festo) can be connected to each port on an IO-Link master.

I-Port

The Festo-specific I-Port interface based on IO-Link offers the following connection options:

- Directly at the fieldbus, by mounting a fieldbus node CTEU
- Connection to a higher-order I-Port master from Festo

Overview

Valve terminals VTUB-12

Key features – Electrical components

Protective circuit

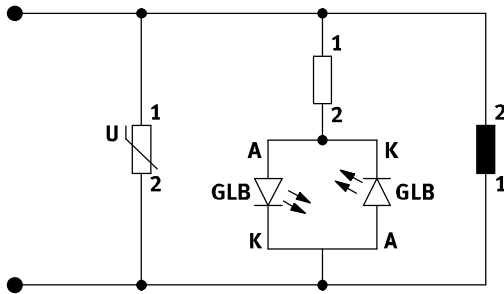

Manifold rail with LED signal status display, multi-pin plug, 2-20 valve positions

 Note

The electrical protective circuit only relates to the optional LED variant with the multi-pin plug connection.

Manifold rail with LED signal status display, multi-pin plug, 21-35 valve positions

Electrical multi-pin plug connection

The following multi-pin plug connections are available for the valve terminal VTUB-12:

- Sub-D multi-pin plug connection (25-pin)
- Sub-D multi-pin plug connection (44-pin)

Pins 1 ... 44 are used for addresses 0 ... 43 in order.

If fewer than 44 addresses are used for the valve terminal, the remaining pins are left free. Pins 22 ... 25 or 41 ... 44 are reserved for the neutral conductor or 24 V respectively.

The valves are switched by means of positive or negative logic (positive switching or negative switching). Mixed operation is not permitted.

Each pin on the multi-pin plug can actuate exactly one solenoid coil. If the maximum configurable number of valve positions is 35, then 35 valves can be addressed with one solenoid coil (single solenoid).

 Note

A double solenoid valve occupies two valve positions. With 17 or more valve positions, the number of available valve positions for double solenoid valves decreases.

Protective circuit

Manifold rail with I-Port interface

I-Port interface/IO-Link

The valve terminal VTUB-12 can be connected as follows via the I-Port connection:

- Directly to the fieldbus by mounting the CTEU bus node on the valve terminal
- To an IO-Link master (in IO-Link mode) via a cable

Up to 35 solenoid coils can be actuated. A valve position always occupies one address. The following assignment applies in this case:

- Less significant valve position (address) for coil 14
- More significant valve position (address) for coil 12

Addresses are allocated in ascending order without gaps, from left to right. The address allocation is independent of whether blanking plates or valves are used.

Valve terminals VTUB-12

Key features – Applications

FESTO

Equipment

Operate system equipment with unlubricated compressed air if possible. Festo valves and cylinders are designed so that, if used as intended, they will not require additional lubrication and will still achieve a long service life.

The quality of compressed air downstream of the compressor must correspond to that of unlubricated compressed air. If possible, do not operate all of your system equipment with lubricated compressed air. The lubricators should, where possible, always be installed directly upstream of the actuator used.

Incorrect additional oil and too high an oil content in the compressed air reduce the service life of the valve terminal.

Use Festo special oil OFSW-32 or the alternatives listed in the Festo catalogue (as specified in DIN 51524 HLP32; basic oil viscosity 32 CST at 40 °C).

Bio-oils

When using bio-oils (oils which are based on synthetic or native ester, e.g. rapeseed oil methyl ester), the maximum residual oil content of 0.1 mg/m³ must not be exceeded (see ISO 8573-1 Class 2).

Mineral oils

When using mineral oils (e.g. HLP oils to DIN 51524, parts 1 to 3) or similar oils based on poly-alpha-olefins (PAO), the maximum residual oil content of 5 mg/m³ must not be exceeded (see ISO 8573-1 Class 4).

A higher residual oil content irrespective of the compressor oil cannot be permitted, as the basic lubricant would be flushed out over time.

Valve terminals VTUB-12

CE marking (see declaration of conformity)	To EU EMC Directive
Max. positive test pulse with 0 signal	[µs] 0.8 ms
Max. negative test pulse with 1 signal	[µs] 0.3 ms
Resistance to shocks	Shock test with severity level 1 to FN 942017-5 and EN 60068-2-27
Vibration resistance	Transport application test with severity level 1 to FN 942017-4 and EN 60068-2-6
Most reliable component	Yes
Note on forced checking procedure	Min. 1/week

Valve terminals VTUB-12

Technical data – Valve terminal VTUB-12 with multi-pin plug connection

Product weight		
Approx. weight		[g]
Valves		
• 5/2-way single solenoid (code M), ducted solenoid exhaust		27.8
• 5/2-way double solenoid (code J), ducted solenoid exhaust		57.4
• 5/2-way single solenoid (code M), unducted solenoid exhaust		27.5
• 5/2-way double solenoid (code J), unducted solenoid exhaust		57.1
• 3/2-way closed (code K), ducted/unducted solenoid exhaust		26.3
• 3/2-way open (code N), unducted solenoid exhaust		28.1
• 3/2-way open (code N), ducted solenoid exhaust		29.4
Manifold rail		
• Multi-pin plug with Sub-D plug, 25-pin	2 valve positions	382
	4 valve positions	484
	6 valve positions	585
	8 valve positions	687
	10 valve positions	788
	12 valve positions	890
	14 valve positions	992
	16 valve positions	1093
	18 valve positions	1195
	20 valve positions	1296
• Multi-pin plug with Sub-D plug, 44-pin	24 valve positions	1500
	28 valve positions	1704
	32 valve positions	1907
	35 valve positions	2060
Blanking plate for vacant position		13.8
Power supply module for pressure zones or additional supply		13.8
Separator for duct separation		9.8
Pneumatic distributor Q4, Q6, Q4-Q6		65.6, 59, 62.3
Blanking plate for pneumatic distributor		8.4
Selector plate		38.8
Sub-base for individual valve, single width		15
Sub-base for individual valve, double width		30

Electrical data		
Nominal operating voltage	[V DC]	24, reverse polarity protected
Permissible voltage fluctuations		±10%
Electrical power consumption per solenoid coil	[W]	1
Protection class to EN 60529		IP65
Duty cycle	[%]	100

Materials	
Manifold rail	Wrought aluminium alloy
Solenoid valve housing	PA reinforced
Solenoid valve seals	NBR, TPE-U
Solenoid valve piston spool	Wrought aluminium alloy
Blanking plate housing, additional supply housing	PA reinforced
Separator for duct separation	Beryllium bronze, brass
Pneumatic distributor, pneumatic distributor blanking plate	PA reinforced
Selector plate	Wrought aluminium alloy
Sub-base for individual valve	PA reinforced
Note on materials	RoHS-compliant
Note on materials, power supply module	RoHS-compliant, free of copper and PTFE

Valve terminals VTUB-12

Technical data – Valve terminal VTUB-12 with I-Port interface, IO-Link

-  Voltage
24 V DC
-  Pressure
+2.8 ... +8 bar
-  Temperature range
-5 ... +60 °C

General technical data				
Valve function	3/2C	3/2U	5/2-way, single solenoid	5/2-way, double solenoid
Design	Poppet valve with spring return			Poppet valve with self-holding function
Valve function	Closed	Open	Monostable	Bistable
Sealing principle	Soft			
Actuation type	Electric			
Reset method	Mechanical spring			-
Type of control	Piloted			
Pilot air supply	Internal			
	External			
Direction of flow	Non-reversible			
Exhaust function	No flow control			
Manual override	Non-detenting, non-detenting/detenting			
Type of mounting	Via through-hole			
Width	[mm]	12		24
Nominal size	[mm]	4		
Max. number of valve positions		35	35	17
Max. number of pressure zones		18		
Standard nominal flow rate	q _{nN}	[l/min]	400	
Pneumatic connection		1, 3, 5	G $\frac{1}{4}$	
		2, 4	QS-4 or QS-6	
		12, 14	G $\frac{1}{8}$	

Operating and environmental conditions				
Valve function	3/2C	3/2U	5/2-way, single solenoid	5/2-way, double solenoid
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]			
Note on operating/pilot medium	Lubricated operation possible (in which case lubricated operation will always be required)			
Operating pressure	Internal pilot air	[bar]	+2 ... +8	+2.8 ... +8
	External pilot air	[bar]	0 ... +8	
Pilot pressure		[bar]	+2 ... +8	+2.8 ... +8
Ambient temperature		[°C]	-5 ... +50	
Temperature of medium		[°C]	-5 ... +50	

-  Note
The CE marking for the valve terminal with I-Port interface applies up to a maximum connecting cable length of 30 m.

Valve terminals VTUB-12

Technical data – Valve terminal VTUB-12 with I-Port interface, IO-Link

Safety data		
CE marking (see declaration of conformity)		To EU EMC Directive
Max. positive test pulse with 0 signal	[µs]	0.8 ms
Max. negative test pulse with 1 signal	[µs]	0.3 ms
Resistance to shocks		Shock test with severity level 1 in accordance with FN 942017-5 and EN 60068-2-27
Vibration resistance		Transport application test with severity level 1 in accordance with FN 942017-4 and EN 60068-2-6
Tried and tested component		Yes
Note on forced checking procedure		Min. 1/week

Product Range and Company Overview

A Complete Suite and Company Overview

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services

Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drivers

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 16,000 employees in 60 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
