Key features

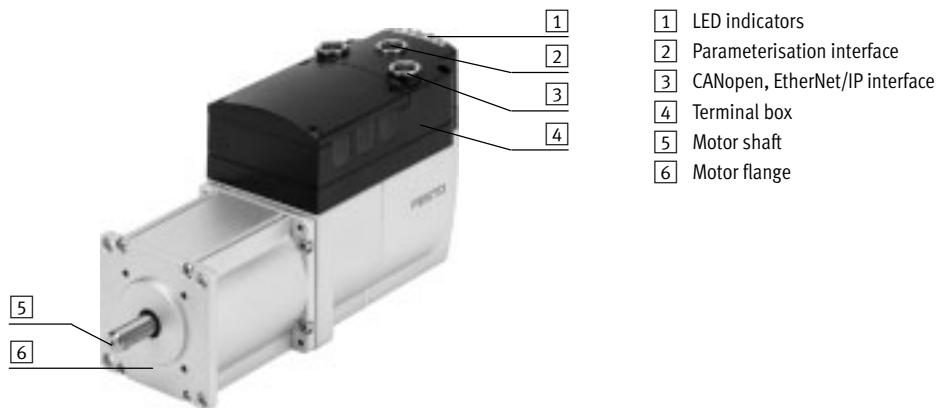

FESTO

At a glance

The positioning drive EMCA is a brushless DC motor (EC motor) for positioning tasks with integrated power and control electronics. That avoids long motor cables, improves the electromagnetic compatibility and reduces the installation time and space requirements.

In detail

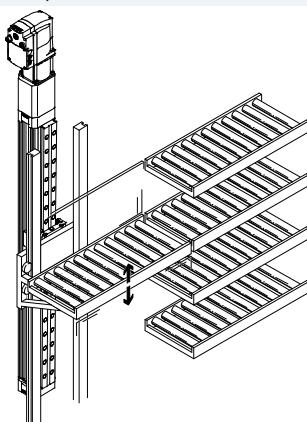

- 64 freely programmable position sets
- Absolute position sensing via:
 - Standard: single-turn absolute encoder
 - Optional: multi-turn absolute displacement encoder with integrated buffer, for saving the position values of movements for up to 7 days (without external power supply). The time can be extended using an external battery box (→ 23)
- Optional: integrated holding brake including holding brake control
- Bus protocol: CANopen, EtherNet/IP
- Safety function: "safe torque off" (STO)
- Selectable degree of protection:
 - Standard: IP54 housing and connection technology
 - Optional: IP65 housing and connection technology for increased requirements
- Accessories:
 - Gear unit:
 - Standard: flange-mounted gear unit and angle step (in stock)
 - Special gear unit on request
 - Braking resistor:
 - Integrated chopper braking resistor
 - Optional: external braking resistor
- Drive configuration with PositioningDrives
 - Sizing of EMCA and gear unit
 - Braking resistor required: Yes/No
- Commissioning via the Ethernet interface with Festo Configuration Tool (FCT)

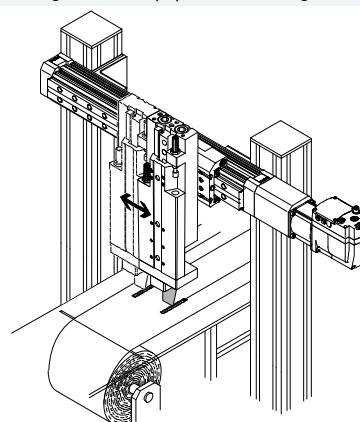

Application examples

- Machines in the fields of printing presses and post presses
- Packaging and labelling machines
- Woodworking machines
- Textile industry
- Medical technology
- Material transport
- Conveying
- Labelling
- Electronics manufacturing

Adjusting sorting conveyors

Programming formats for paper or foil cutting machines

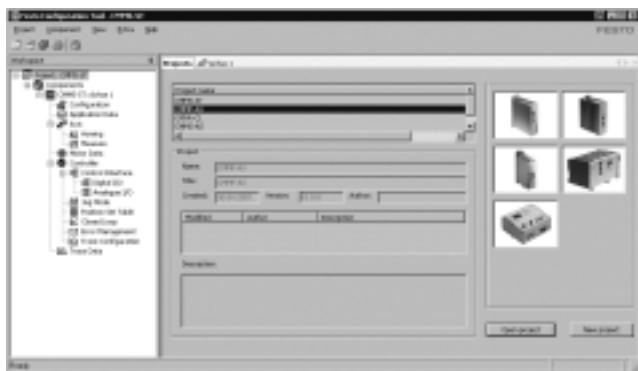

Integrated drives EMCA

Key features

FCT software – Festo Configuration Tool

Software platform for electric drives from Festo

- All drives in a system can be managed and saved in a common project
- Project and data management for all supported device types
- Easy to use thanks to graphically supported parameter entry
- Universal mode of operation for all drives
- Work offline at your desk or online at the machine

FHPP – Festo Handling and Positioning Profile

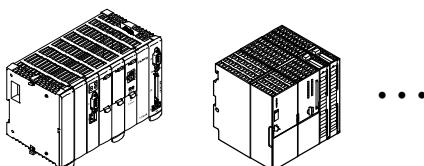

Optimised data profile

Festo has developed an optimised data profile, the "Festo Handling and Positioning Profile (FHPP)", which is especially tailored to handling and positioning applications.

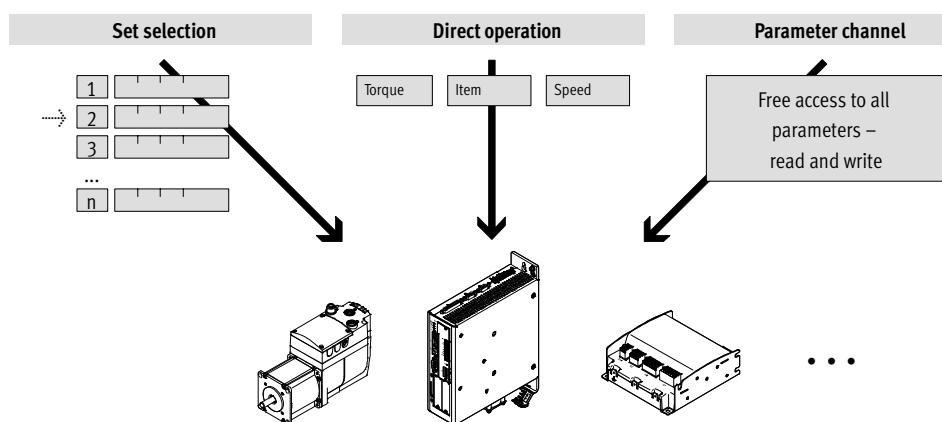

With the FHPP data profile, Festo motor controllers can be actuated using a fieldbus interface via standardised control and status bytes.

The following are defined, among others:

- Operating modes
- I/O data structure
- Parameter objects
- Sequence control

Fieldbus communication

Torsional rigidity [Nm/arcmin]	0.105	
Max. torsional backlash [deg]	0.67	
Mass moment of inertia ⁶⁾ [kgcm ²]	0.09	
Max. efficiency [%]	90	
Operating temperature ⁷⁾ [°C]	-20 ... +90	
Degree of protection	IP54	
Running noise ⁸⁾ [dB(A)]	≤ 70	
Product weight [g]	930	
Note on materials	RoHS compliant Contains paint-wetting impairment substances	

- 1) At the output shaft
- 2) Related to a rotational speed of 3000 rpm and operating mode S1
- 3) Related to a rotational speed of 3150 rpm
- 4) The permissible operating temperature may not be exceeded
- 5) Reference plane corresponds to the middle of the output shaft length
- 6) Related to the drive shaft
- 7) Note the temperature range of the motor
- 8) Related to the rotational speed of 3000 rpm at a distance of 1 m
