

Pneumatic valves VUWG

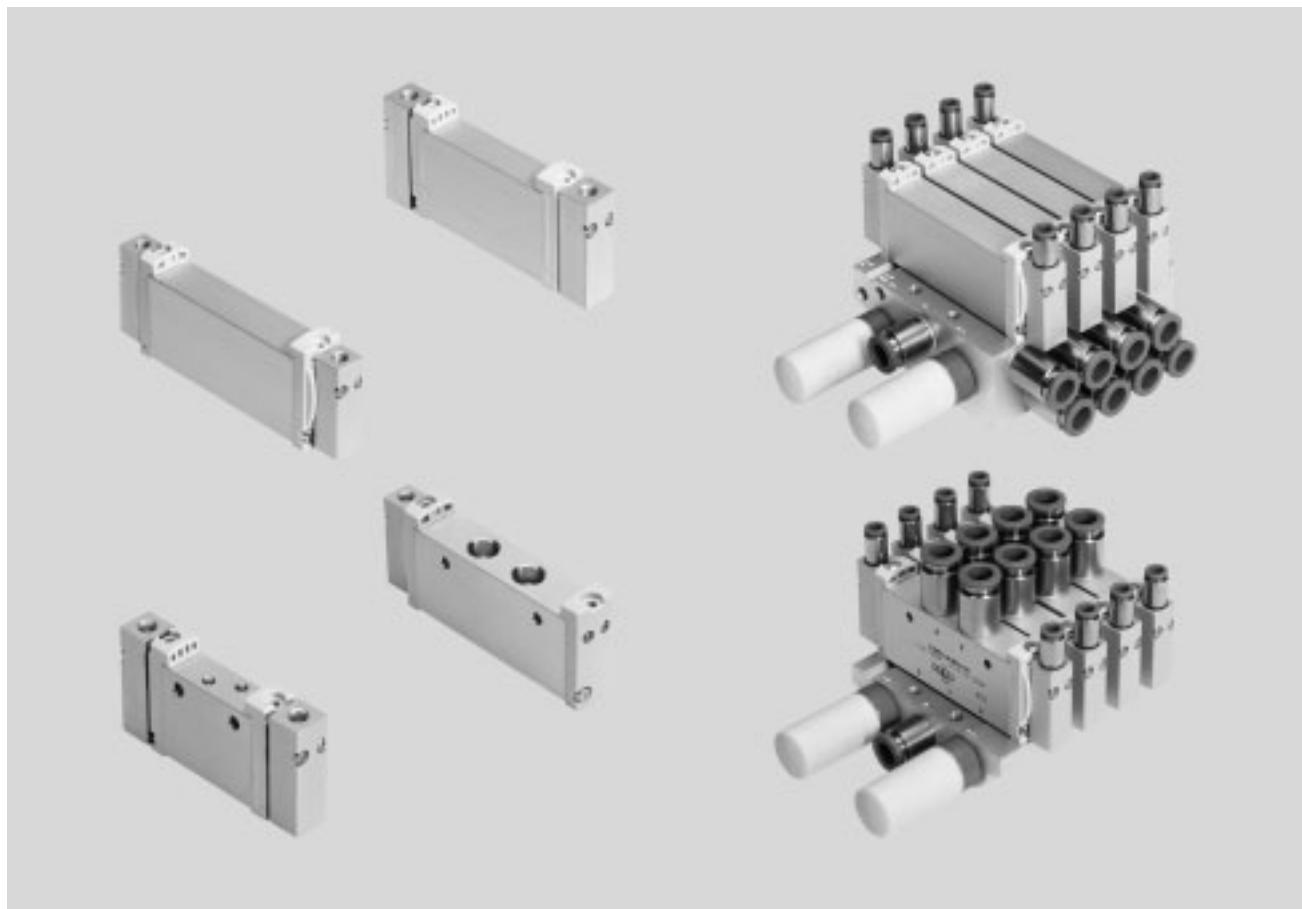

FESTO

Pneumatic valves VUWG

Key features

FESTO

Innovative

- Various connection sizes (M3, M5, M7, G $\frac{1}{8}$, G $\frac{1}{4}$)
- Max. pressure 10 bar
- 2x3/2-way valve in one valve housing

Versatile

- Wide range of valve functions
- In-line valves can be used as individual valves or manifold valves
- M5/M7 in-line valves can be mixed on one manifold rail
- Identical sub-base valves for M5 or M7 manifold rail
- Manifolds with pressure zones
- Choice of quick push-in connectors

Reliable

- Sturdy and durable metal components
 - Valves
 - Manifold rails
- Reliable servicing thanks to valves that can be replaced quickly and easily

Easy to mount

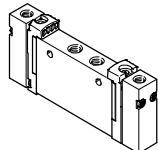

- Secure mounting on wall or H-rail
- Easy mounting thanks to captive screws and seals

Pneumatic valves VUWG

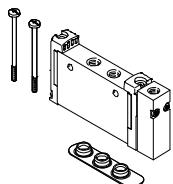

FESTO

Key features – Pneumatic components

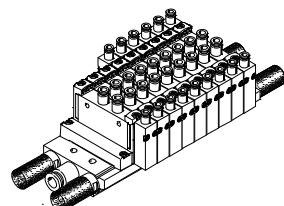

Individual valves and valve manifolds

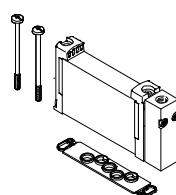

VUWG-L in-line valve as individual valve

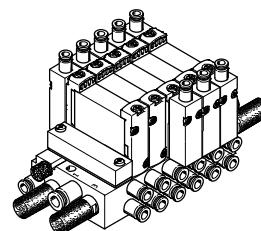

VUWG-S in-line valve for manifold assembly

VUWG-S valve manifold consisting of in-line valves

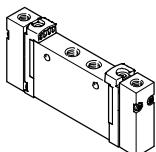

VUWG-B sub-base valve for manifold assembly

VUWG-B valve manifold consisting of sub-base valves

VUWG basic valves

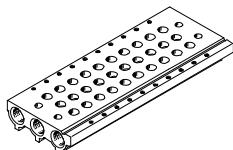

- Width 10, 14 and 18 mm
- 2x 3/2-way, 5/2-way and 5/3-way valves
- In-line valves
- Sub-base valves

Pneumatic valves VUWG

Key features – Pneumatic components

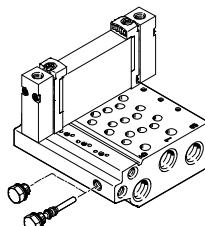

FESTO

Manifold rail for in-line valves

- For in-line valves M3, M5, M7, G $\frac{1}{8}$ and G $\frac{1}{4}$, width 10/14/18
- For 2x3/2-way, 5/2-way and 5/3-way valves
- 2 to 10 and 12, 14, 16 valve positions

Manifold rail for sub-base valves

- For sub-base valves 10A, 10, 14 and 18, width 10/14/18
- Manifold rail with M3, M5/M7, G $\frac{1}{8}$ and G $\frac{1}{4}$ working ports
- For 2x3/2-way, 5/2-way and 5/3-way valves
- 2 to 10, 12, 14 and 16 valve positions
- The sub-base valves always have external pilot air. The pilot air is set via the manifold rail. A short (for internal pilot air) and long (for external pilot air) blanking plug are included with the manifold rail for this purpose.

Note

Duct 84 must not be sealed by a blanking plug when connecting a sub-base valve.

Blanking plate for vacant position

For covering unused valve positions

Supply plate

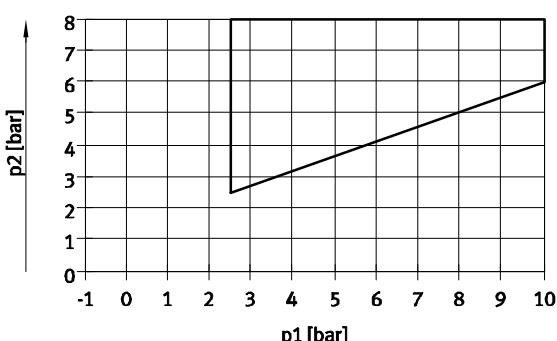

For additional air supply and exhaust via a valve position

Separator for pressure zones

For creating multiple pressure zones

Pilot pressure p2 as a function of operating pressure p1

This graph applies to the 2x3/2-way valves and 5/2-way single pilot valves with air spring:

- T32CA, T32UA, T32HA
- M52A, M52R

Note

The compressed air for the air spring is supplied from port 1 (operating pressure).

To ensure reliable valve switching, the minimum pressure as per the graph must always be adhered to for the pilot pressure.

Pneumatic valves VUWG

FESTO

Key features – Pneumatic components

Creating pressure zones and separating exhaust air

Compressed air is supplied and exhausted via the manifold rail and supply plates. The position of the supply plates and duct separations can be freely selected with the VUWG.

Pressure zones are created by isolating the internal supply ducts between the manifold sub-bases by means of appropriate duct separation.

Pressure zone separation can be used for the following ducts:

- Duct 1
- Duct 3
- Duct 5

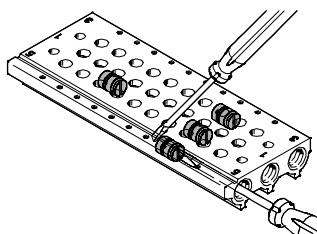

- Note
- Use separators if the exhaust air pressures are high
 - Use at least one supply plate/supply for each pressure zone

Duct separation

	Description	Symbol
	The pressure zones can be freely configured with the VUWG. The following duct separations are possible:	<ul style="list-style-type: none"> • Duct 1 closed
		<ul style="list-style-type: none"> • Duct 1/3/5 closed
		<ul style="list-style-type: none"> • Duct 3/5 closed
	The number of pressure zones with the VUWG is only limited by the number of valve positions on the manifold rail. Note that each supply plate occupies one valve position.	

Separator VABD

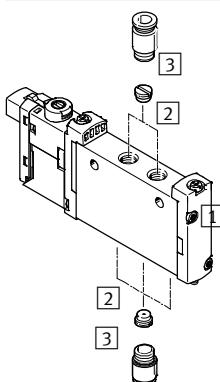

- Note
- As the separators are mounted from only one side using a slotted screwdriver, several pressure zones can be created in one profile.

Pneumatic valves VUWG

Key features – Pneumatic components

FESTO

Flow control valve

- [1] Valve
- [2] Flow control valve
- [3] Fitting

Flow control mountable on port 1, 3/5 and/or on port 2/4.

Operation with different pressures

Vacuum operation

Note the following with vacuum operation:

- M52 in-line valves with pneumatic spring and pneumatic/mechanical spring reset (vacuum only at 3/5)
- T32 valves with pneumatic spring reset (vacuum only at 3/5)

If external pilot air via duct 14 is used, M52 sub-base valves (B) can be used without restriction.

The remaining valve types can be used without restriction for vacuum.

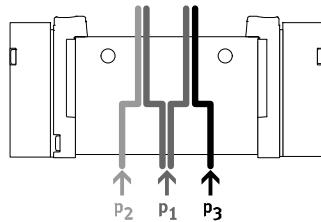

Reverse operation

The valves with pneumatic spring are not suitable for reverse operation, since at least the minimum pilot pressure must be present in duct 1.

Pressure must be present at port 1.

Pressure deflector (internal pilot air)

- If two different pressures are required.

- Different pressures can be supplied at duct 1, 3 and 5.

- With internal pilot air, the minimum pilot pressure must be adhered to in duct 1

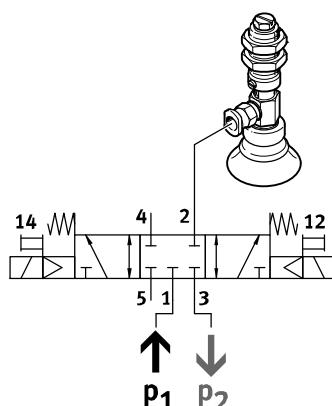

- With 2x3/2-way valves without spring return, the minimum pilot pressure must always be adhered to in duct 1

Advantages

Any pressure or vacuum can be connected at ducts 3 and 5 both with

external and internal pilot air.

Vacuum, ejector pulse and normal position

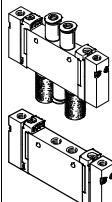

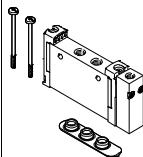

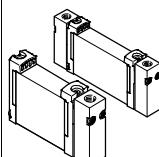

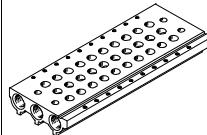

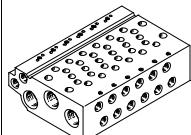

Vacuum, ejector pulse and normal position with internal pilot air can be achieved by connecting vacuum

at duct 3 and pressure for the ejector pulse at duct 1.

4) H=2x 3/2-way valve in one housing with 1x normally closed and 1x normally open

5) Combined reset method

6) Corrosion resistance class 2 according to Festo standard 940 070

Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents.

7) Only with external pilot air supply
