FESTO

Parallel grippers DHPS

Key features

FESTO

At a glance

General information

- Resilient and precise T-slot guide of the gripper jaws
- Oval piston for high gripping forces
- High gripping forces with compact dimensions
- Gripper jaw centring options
- Max. repetition accuracy
- Gripping force retention
- Internal fixed flow control
- Wide range of options for mounting on drive units

- Sensor technology:
 - Adaptable position sensor for the small grippers
 - Integratable proximity sensors for the medium and large grippers

Flexible range of applications

- Can be used as a double-acting and single-acting gripper
- Compression spring for supplementary or retaining gripping forces
- Suitable for external and internal gripping

The technology in detail

Gripper closed

Gripper open

- 1 Gripper jaw
- 2 Reversing lever
- 3 Piston with magnet

- - Note
Gripper selection

Position sensing/force control

With position transmitter SMAT-8M, SDAT

Analogue positional feedback possible

- Analogue output
 - 0 ... 10 V
 - 4 ... 20 mA

With proportional pressure regulator VPPM

Infinite adjustment of the gripping force possible

- Setpoint input
 - 0 ... 10 V
 - 4 ... 20 mA

With proximity sensor SMT-8G/-10G

Multiple positions can be sensed:

- Open
- Closed
- Workpiece gripped

DHPS-...-A-NC	–	0.08	0.47	1.49	3.84	12.73

Gripper jaw backlash

The plain-bearing guide used in the grippers means that there is backlash between the gripper jaws and the housing. The values entered in the table for the backlash were calculated in accordance with the traditional accumulative tolerance method.

Size	6	10	16	20	25	35
Max. gripper jaw backlash Sz	≤D.02					
Max. gripper jaw angular backlash ax, ay	≤D.1	≤D.5				

Opening and closing times [ms] at 6 bar

Without external gripper fingers

With external gripper fingers

The indicated opening and closing times [ms] were measured at room temperature at an operating pressure of 6 bar with horizontally mounted grippers without additional gripper

fingers. The grippers must be throttled for greater loads [g]. Opening and closing times must then be adjusted accordingly.

Technical data

FESTO

Gripping force F_H per gripper jaw at 6 bar as a function of lever arm x and eccentricity a and b

The following formula must be used to calculate the lever arm x with eccentric gripping:

$$x = \sqrt{a^2 + b^2}$$

The gripping force F_H can be read from the graphs (→ page 10/11) using the calculated value x .

Calculation example

Given:

Distance $a = 25 \text{ mm}$

Distance $b = 20 \text{ mm}$

To be calculated:

The gripping force at 6 bar,
with a DHPS-16,
used as an external gripper

Procedure:

Calculating the lever arm x

$$x = \sqrt{25^2 + 20^2}$$

$$x = 32 \text{ mm}$$

The graph (→ page 10) gives a value
of $F_H = 79 \text{ N}$ for the gripping force.

Technical data

FESTO

Spring force F_F as a function of size and total gripper jaw stroke l

Gripping force retention for DHPS-...-N...

The spring forces F_F as a function of gripper jaw stroke l can be determined from the following graph.

Spring force F_F as a function of size, gripper jaw stroke l and lever arm x per gripper finger

The lever arm x must be taken into consideration when determining the actual spring force F_{Ftotal} .

The formulae for calculating the spring force are provided in the table below.

Gripping force retention	Size	F_{Ftotal} per gripper finger
NO, NC	10	$-0.02 \cdot x + 0.5 \cdot F_F$
	16	$-0.08 \cdot x + 0.5 \cdot F_F$
	20	$-0.1 \cdot x + 0.5 \cdot F_F$
	25	$-0.12 \cdot x + 0.5 \cdot F_F$
	35	$-0.19 \cdot x + 0.5 \cdot F_F$

Determination of the actual gripping forces F_{Gr} for DHPS-...-NO and DHPS-...-NC as a function of application

The parallel grippers with integrated spring type DHPS-...-NO (opening gripping force retention) and DHPS-...-NC (closing gripping force retention) can be used as

- single-acting grippers

- grippers with supplementary gripping force and
- grippers with gripping force retention depending on requirements.

In order to calculate the available gripping forces F_{Gr} (per gripper jaw),

the gripping force (F_H) and spring force (F_{Ftotal}) must be combined accordingly.

Application

Single-acting	Supplementary gripping force	Gripping force retention
- Gripping with spring force: $F_{Gr} = F_{Ftotal}$ - Gripping with pressure force: $F_{Gr} = F_H - F_{Ftotal}$	Gripping with pressure and spring force: $F_{Gr} = F_H + F_{Ftotal}$	Gripping with spring force: $F_{Gr} = F_{Ftotal}$

1) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation may occur. External visible parts with primarily decorative requirements for the surface and which are in direct contact with the ambient atmosphere typical for industrial applications.

Parallel grippers DHPS

Accessories

FESTO

Adapter kit HAPG

Material:
Wrought aluminium alloy
Free of copper and PTFE
RoHS-compliant

 Note

The kit includes the individual mounting interface as well as the necessary mounting material.

Permissible drive/gripper combinations with adapter kit					Download CAD data → www.festo.com

Installation instructions for position sensor SMH-S1

To guarantee the functionality of the position sensor, the outlet for the cable and the compressed air tubing must be facing the same direction during installation.

Signal converter SVE4 for position sensor SMH-S1

- Converts analogue signals into switching points
- Switching function freely programmable with teach-in
- Threshold value, hysteresis or window comparator

Position transmitter

The position transmitter continuously senses the position of the piston.
It has an analogue output with an output signal in proportion to the piston position.
