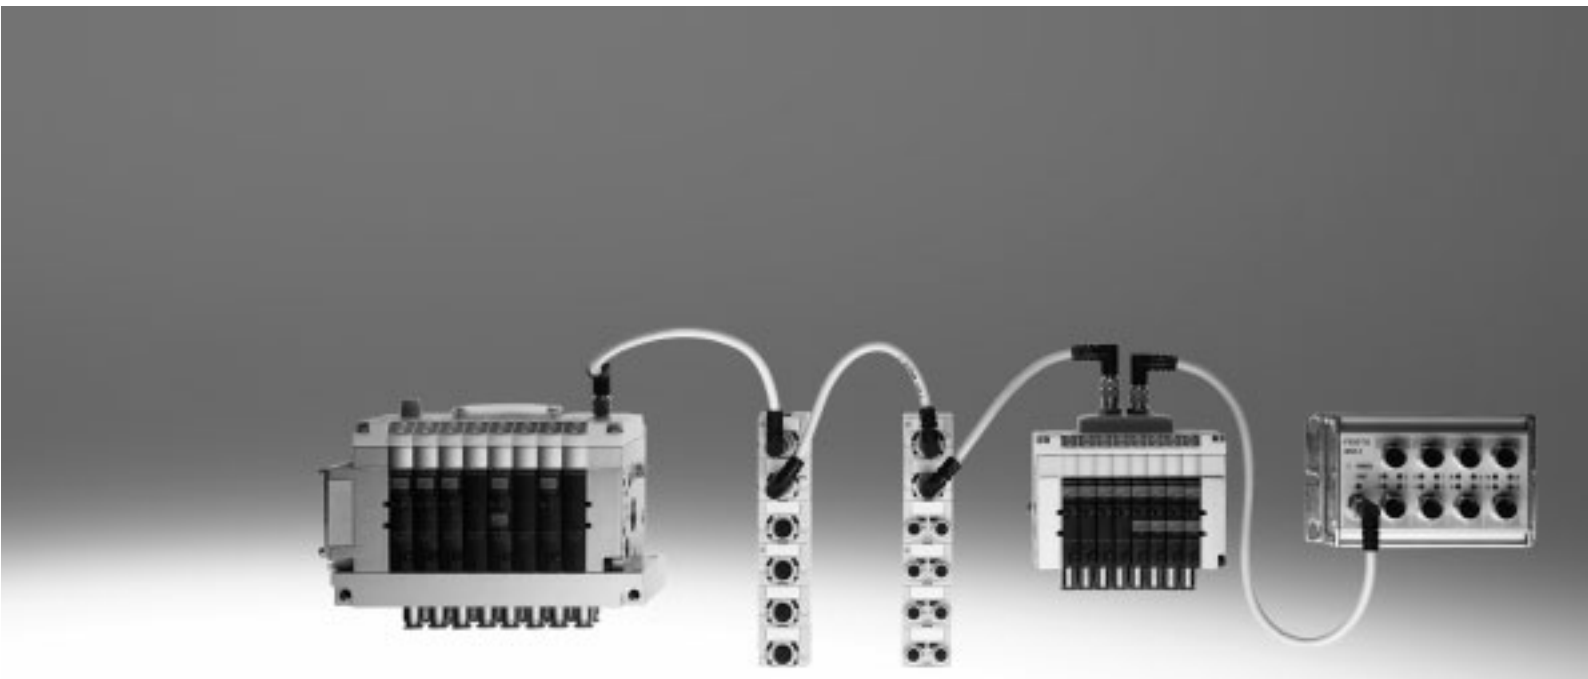
Fieldbus Direct

FESTO



Fieldbus Direct

Key features

The system

- Extremely compact and space-saving design
- Low-cost solution for the connection of a small number of valves to a fieldbus
- Extremely safe, protection class up to IP65 depending on the series

The Fieldbus Direct system comprises the following valve terminal series:

- CPV
- CPV-SC

The Fieldbus Direct product range is the most compact way of connecting valves to a fieldbus. The fieldbus node is directly integrated in the electrical actuation of the valve terminal and therefore takes up only a minimal amount of space.

Fieldbus Direct is a system for the connection of one valve terminal to nine different fieldbus standards. The most important systems including PROFIBUS, Interbus, DeviceNet and CANopen are supported.

The CP string extension option allows the functions and components of the CPI installation system to be used.

The optional string extension allows additional valve terminals and I/O modules to be connected to the fieldbus node of the Fieldbus Direct system.

The I/O modules and cables for the CP string extension are ordered using the order code for the CPI installation system.

The maximum length of the CP string extension is 10 metres, which means that the extension modules can be mounted directly on-site. All of the required electrical signals are transmitted via the CPI cable, which means that no further installation is needed on the extension module.

Valve terminal configurator

Online via: ➔ www.festo.com

A valve terminal configurator is available online to help you select a suitable Fieldbus Direct valve terminal. Like all valve terminals, Fieldbus Direct is ordered using an ident. code.

This ident. code specifies the valve functions, the number of valves, vacant positions as well as the additional functions and the type of compressed air supply.

As is the case with all Festo products, all Fieldbus Direct valve terminals are supplied:

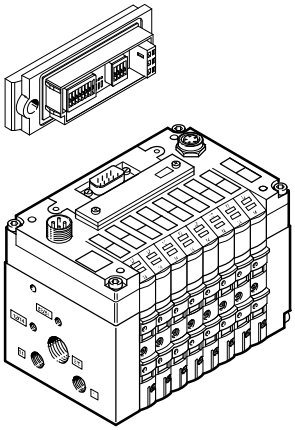
- fully pre-assembled
- fitted with fittings on request

- tested for electrical function
- tested for pneumatic function
- securely packaged
- manuals can be downloaded free of charge

Fieldbus Direct

Key features

Switch module for CPV Direct



The bus parameters and the device configuration of CPV Direct are set using the removable switch module.

The integrated DIL switches are easy to set and check, even if the mounting position is difficult to access.

In the case of the valve terminals with the CP system according to Specification “B”, the DIL switches for parameterisation/configuration are integrated in the basic electrical unit.

CP string extension

The optional string extension allows an additional valve terminal and I/O modules to be connected to the fieldbus nodes of the Fieldbus Direct system. A CP string of the CP installation system is integrated in the fieldbus node as an extension. Different input and output modules as well as CPV, MPA-S and CPV-SC valve terminals can be connected.

The maximum length of the CP string extension is 10 metres, which means that the extension modules can be mounted directly on-site. All of the required electrical signals are transmitted via the CP cable, which in turn means that no further installation is needed on the extension module.

The CP string interface offers:

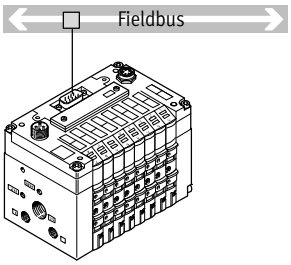
- 16 input signals
- 16 output signals for output modules 24 V DC or solenoid coils
- Logic and sensor supply for the input modules
- Load voltage supply for the valve terminals
- Logic supply for the output modules

The variant according to Specification “B” supports the connection of

- 32 inputs
- 32 outputs 24 V DC or solenoid coils.

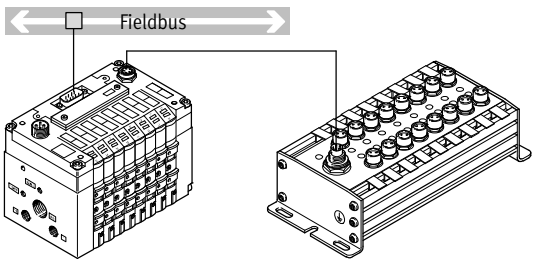
It goes without saying that the CP modules without Specification “B” can also be connected to the CPI string extension of valve terminals.

CPV Direct with fieldbus node



- 8 valve slices
- 16 solenoid coils
- 16 3/2-way valves

CPV Direct with input module 24 V DC for detecting the cylinder end positions



- 8 valve slices with up to 16 solenoid coils
- 16 inputs M8 or M12, each with sensor supply

Variant according to Specification “B”

- 32 input signals
- 32 output signals/solenoid coils

Fieldbus Direct system diagnostics

The fieldbus node together with the modules connected to the CP string offer several diagnostic options.

Diagnostic LEDs on the Fieldbus Direct node

The fieldbus-specific LEDs display the communication status and the fieldbus function.
Further LEDs display the power supply status of all connected modules as a common message.

- Undervoltage
- Short circuit
- Interruption of voltage

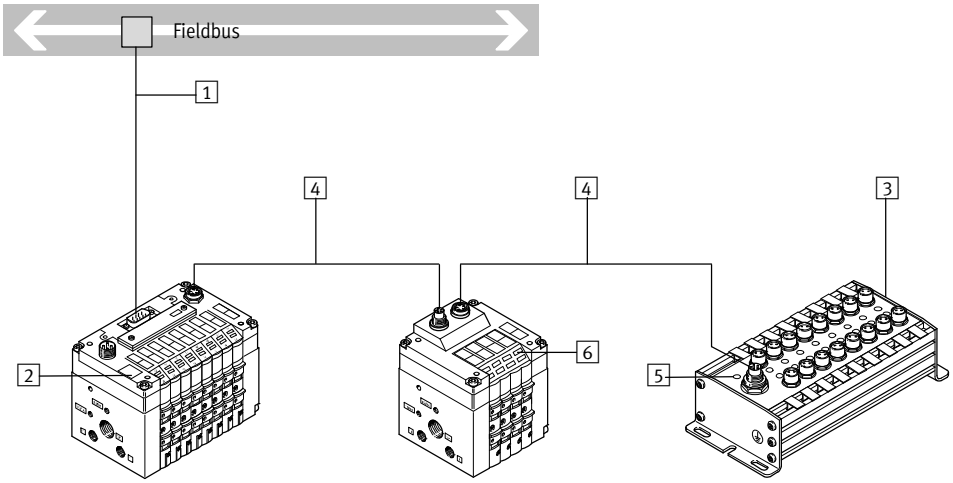
Diagnostic LEDs on the CP extension modules

LEDs on the individual CP/CPI modules display the current status of the switching signals of the inputs or outputs. Additional LEDs display short circuits or overload of the power supply and communication faults on the CP connection.

Diagnostic messages via the fieldbus

All available diagnostic information is transferred to the fieldbus node by means of the CP connection. This means that the diagnostic information for the entire device can be transferred to the fieldbus master.

- Configuration errors
- Short circuit/overload of an output module
- Short circuit/undervoltage of the sensor supply
- Undervoltage/load voltage of the valves
- Interruption of a CP string to one of the CP modules



1 Diagnostics via fieldbus
2 Bus-specific LED
3 Diagnostics via LED on the CP/CPI module
4 Diagnostics via CP string
5 Status display on the CP/CPI module
6 Status display on the valve terminal

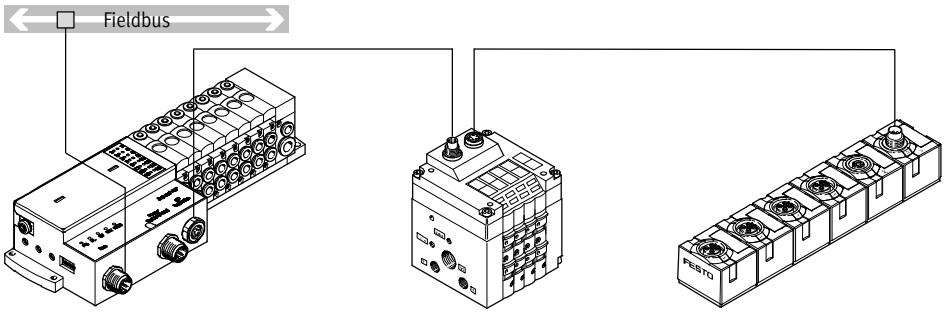
Fieldbus Direct

Overview of examples

FESTO

Connection options

CPV-SC

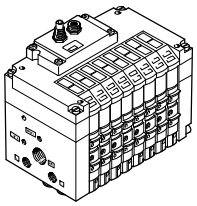


CPVSC1 valve terminals with fieldbus interfaces can be equipped with 4 to 16 valve positions and 4 to 16 solenoid coils.

Designs
- PROFIBUS connection
- 4 to 16 solenoid coils

Valve terminals with CP interface

CPV valve terminal

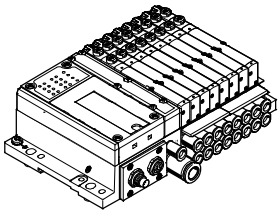


CPV10
CPV14
CPV18

- Max. 16 valves in 8 valve slices
- Highly compact and space-saving
- Width 10, 14, 18 mm
- Nominal flow rate 400/800/1600 l/min
- CPV10, CPV14 and CPV18 with CPI functionality

Further information
➔ Internet: cpv

MPA-S valve terminal

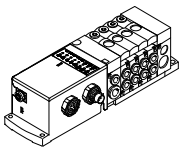


MPA1
MPA2

- Max. 32 valves
- Modular and versatile
- Width 10, 20 mm
- Nominal flow rate 360/700 l/min
- CPI functionality

Further information
➔ Internet: mpa-s

CPV-SC valve terminal

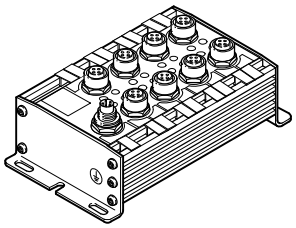


CPV-SC

- Max. 16 valves
- Extremely compact
- Width 10 mm
- Nominal flow rate 170 l/min
- CPI functionality

Further information
➔ Internet: cpv-sc

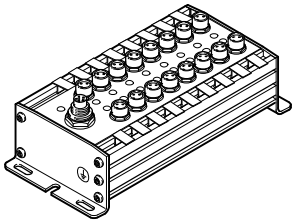
CP/CPI installation system input/output modules



CP-E16-M12x2-5POL
CP-E16N-M12x2-5POL

- 16 inputs 24 V DC
- Signal status display via 16 LEDs
- Operating status display

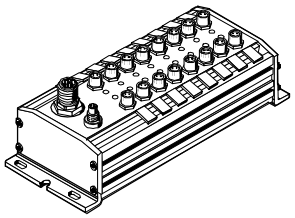
- M12 socket, double allocation
- 1x M9 CP/CPI connection
- PNP/NPN, IP65



CP-E16-M8
CP-E16N-M8

- 16 inputs 24 V DC
- Signal status display via 16 LEDs
- Operating status display

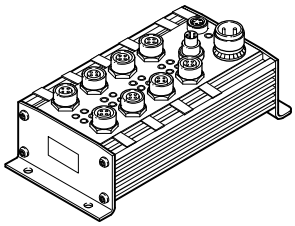
- M8 socket, single allocation
- 1x M9 CP connection
- PNP/NPN, IP65



CP-E16-M8-Z

- 16 inputs 24 V DC
- Signal status display via 16 LEDs
- Operating status display

- Electrical isolation through additional power supply
- M8 socket, single allocation
- 1x M9 CP connection
- Separate sensor supply
- PNP/NPN, IP65



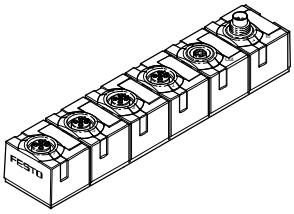
CP-A08-M12-5POL
CP-A08N-M12

- 8 outputs 24 V DC
- Output signal display via 8 LEDs
- Operating status display
- M12 socket, single allocation

- 2x M9 CP connection
- Separate load voltage
- Outputs resistant to overloads and short circuits
- PNP/NPN, IP65

Detailed description of input and output modules
➔ Internet: ctec

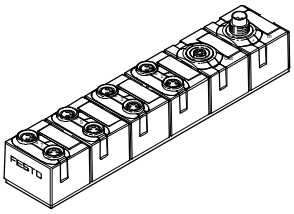
CP/CPI Compact Line input/output modules



CP-E08-M12x2-CL

- 8 inputs 24 V DC
- Signal status display via 8 LEDs
- Operating status display

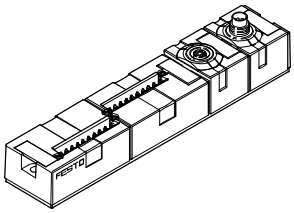
- 4x M12 socket, 5-pin, double allocation
- 2x M9 CP connection
- PNP, IP65/67



CP-E08-M8-CL

- 8 inputs 24 V DC
- Signal status display via 8 LEDs
- Operating status display

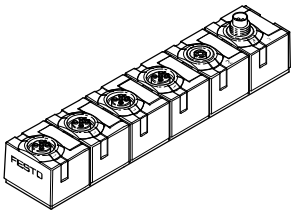
- 8x M8 socket, 3-pin, single allocation
- 2x M9 CP connection
- PNP, IP65/67



CP-E16-KL-CL

- 16 inputs 24 V DC
- Indirect signal status display via LEDs in the connection set of the tension-spring socket
- Operating status display

- Screw terminal or tension-spring sockets
- 2x M9 CP connection
- PNP, IP20



CP-A04-M12x2-CL

- 4 outputs 24 V DC
- Signal status display via 4 LEDs
- Operating status display

- 4x M12 socket, 5-pin, double allocation
- 2x M9 CP connection
- Outputs resistant to overloads and short circuits
- PNP, IP65/67

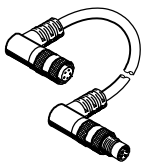
CP connecting cable

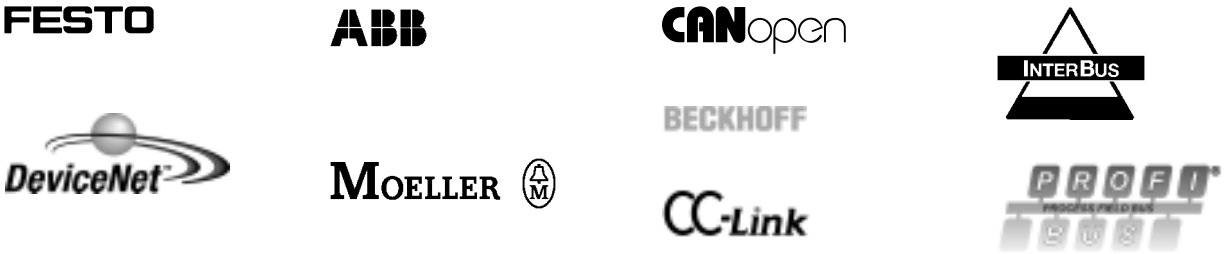


The CP string is connected using pre-assembled CP cables, which are supplied in lengths from 0.5 to 8 metres.

Fieldbus Direct

Peripherals overview

Fieldbus systems for CPV Direct



Fieldbus variants

Of the more than 20 different fieldbus systems (protocols) available on the market, some have emerged as the most important variants. Festo supports these by means of various fieldbus nodes (FBxx) on its valve terminals. Fieldbus systems require a powerful, central PLC and a master interface adapted to that particular fieldbus.

Fieldbus systems are generally used when several devices with many inputs/outputs, complex functions or high communication levels must be controlled. In this case, the advantages of simple cabling, easy diagnostics and maintenance outweigh the extra outlay for a fieldbus master interface and the necessary know-how.

Festo fieldbus

A fieldbus developed by Festo with simple prompting, supported by the controllers of the FPC, SF and IPC series (Festo FB5). A maximum of 98 bus stations can be connected to the Festo fieldbus. The bus can operate with 4 different baud rates (31.25, 62.5, 187.75 and 375 kbps).

INTERBUS

An open fieldbus standard, originally developed by Phoenix Contact and now in worldwide use. Important installation accessories such as bus plugs must be obtained from Phoenix or its partners.

PROFIBUS DP

An open fieldbus standard, originally developed by Siemens and in worldwide use. The bus can operate with baud rates from 9.6 kBaud to 12 MBaud.

DeviceNet

An open fieldbus system based on CAN technology originally developed for the automotive sector. DeviceNet was originally developed by Rockwell (Allen Bradley) and is now an open standard.

Moeller SUCONET K

A maximum of 98 bus stations can be connected to the SUCONET K fieldbus. The bus operates with a baud rate of 187.5 or 375 kbps, depending on the design, bus length, etc. The bus interface is based on RS 485 with a master/slave structure.

ABB CS31

The fieldbus from ABB connects a maximum of 63 fieldbus stations to the fieldbus master. The data is transferred at a constant baud rate of 187.5 kbps. The protocol is suitable for use in all areas of automation technology.

CC-Link

Fieldbus from Mitsubishi (Control & Communication-Link). The integrated interface with RS 485 transmission technology is designed for the typical CC-Link 3-wire connection technology (in accordance with CLPA CC-Link Spec. V1.11).

CANopen

Another fieldbus system based on CAN. Standardised by the "CAN in Automation" (CiA) user group. CANopen is characterised by its multi-master capability and high protocol efficiency. It is used throughout industrial automation.

Beckhoff Fieldbus Box

A fibre optic cable (FOC) fieldbus developed by Beckhoff. This fieldbus is a ring bus. The baud rate is 2000 kbps. A maximum of 124 stations can be connected. The use of fibre optic cables makes it suitable for use in environments where there is a lot of interference.

1) String extension not possible

Operating voltage and load current supply

The operating voltages for the Fieldbus Direct valve terminal and for the extension modules are connected centrally via the 4- or 5-pin M12 plug.
It must supply the operating voltages for the electronic unit of the fieldbus node and the modules connected to the CP string.
The load supply for the valves is supplied separately from the supply for the electronic unit.
The valves of the Fieldbus Direct valve terminals and the valves/outputs on the CP string extension are supplied together via pin 2 of the M12 plug.
The power supply for the sensors connected to the input module is normally also supplied by the M12 plug.
Up to 500 mA for the sensor supply is made available to the connected input module via the CP string.

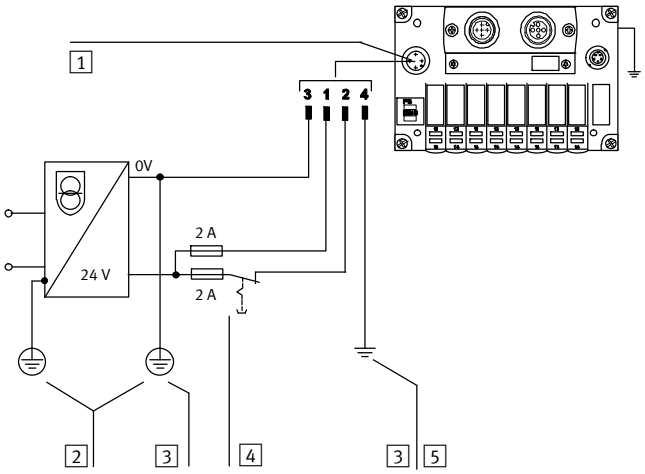
A separate, electrically isolated sensor supply is available with the two input modules CP-E16-KL-IP20-Z and CP-E16-M8-Z. In this case, a max. current of 2 A is available for the sensors.

Since the CP string carries the lines for both communication and the entire power supply for the connected modules, it represents a very easily installed extension option.

The following functions are supported via the CP string:
- Connection for data exchange
- Power supply for the connected modules
- Sensor voltage supply of up to 500 mA
- Load voltage supply for the connected valves

The electrical modules are protected against overload by electronic fuses.
All diagnostic information for the modules is transferred to the fieldbus node via the CP string and from there forwarded to the PLC according to the relevant protocol.

Example of circuitry for CPV Direct – Connection of load voltage



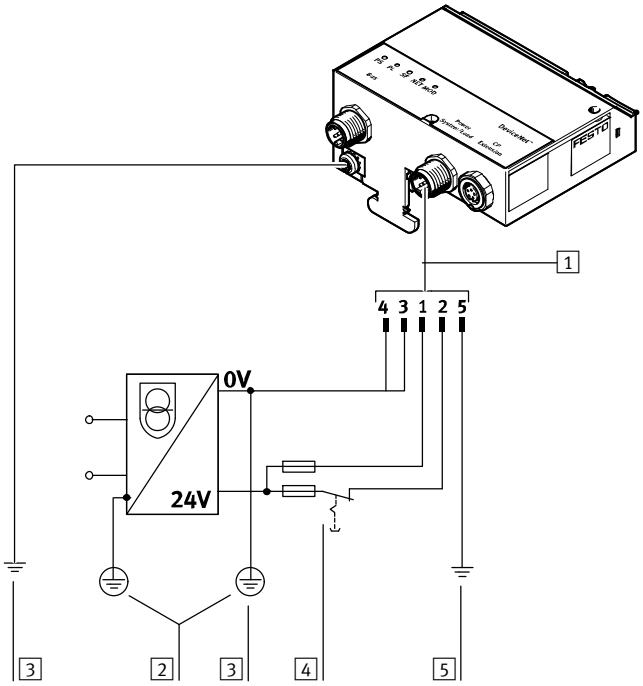
1 Connection for power supply on the CPV Direct valve terminal
2 Protective earth (PE)
3 Equipotential bonding
4 Load voltage (can be disconnected separately) and external fuse
5 Earth terminal on pin 4, configured for 3 A

Pin allocation – Power supply for CPV Direct

	Pin	Description	Notes
	1	24 V DC electronics and sensors	The voltage is supplied via a 4-pin M12 plug (A-coded).
	2	24 V DC valves and outputs	
	3	0 V electronics and sensors	
	4	Earth terminal	

Operating voltage and load current supply

Example of circuitry for CPVSC1 – Connection of load voltage



1 Connection for power supply
2 Protective earth (PE)
3 Equipotential bonding
4 Load voltage (can be disconnected separately) and external fuse
5 Earth terminal at pin 5

Pin allocation – Power supply for CPVSC1

	Pin	Description	Notes
	1	24 V DC electronics and sensors	The voltage is supplied via a 5-pin M12 plug (B-coded). In case of extension with 1st generation CP valve terminals (without auxiliary power supply), a bridge must be placed between pin 3 and pin 4. This cancels the electrical isolation.
	2	24 V DC valves and outputs	
	3	0 V electronics and sensors	
	4	0 V valves and outputs	
	5	Protective earth (PE)	

Fieldbus Direct, CPV-DI01

Technical data – Fieldbus node CPV-DI01

CPV fieldbus node for communication between a CPV valve terminal and a fieldbus master. The fieldbus node is used for activation of a CPV valve terminal with 8 valve slices and 16 solenoid coils and for displaying the signal status via LED. The CPV-... valves are activated via automatic current reduction, which results in less power consumption and heat emission. 16 digital inputs and 8 digital outputs or 16 valves can be connected via a serial CP string extension.

DI01 supports 4 different fieldbus protocols, which are selected by means of DIL switches:

- PROFIBUS DP
- Moeller SUCOnet K
- ABB CS31
- Festo fieldbus

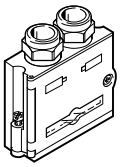
The CPV fieldbus node is available in three sizes, with identical performance characteristics:

- CPV10
- CPV14
- CPV18

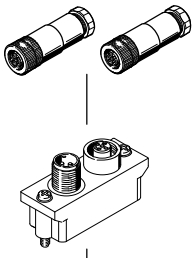
Application

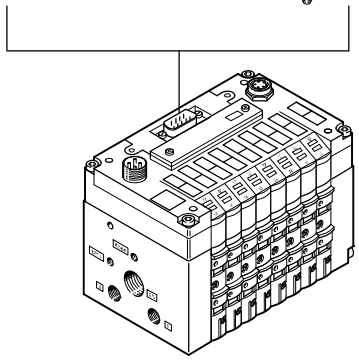
Bus connection

Sub-D socket



M12 adapter





Sub-D socket

- 9-pin Sub-D socket
- Installation with IP65 protection

The bus connection is established via a 9-pin Sub-D socket with a typical PROFIBUS allocation (to EN 50 170). The bus connector plug (with protection class IP65 from Festo or IP20 from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable. An active bus terminal can be connected using the integrated DIL switch. The Sub-D interface is designed for the activation of network components via a fibre optic cable connection.

M12 adapter

- Plug connector 2xM12
- Installation with IP65 protection

Alternatively the bus connection can be established via a 2x M12 adapter (B-coded).

Fieldbus Direct, CPV-DI02-8

Technical data – Fieldbus node CPV-DI02-8

CPV fieldbus node according to the CP system with Specification “B” for communication between a CPV valve terminal and a fieldbus master. The fieldbus node is used for activation of a CPV valve terminal with 8 valve slices and 16 solenoid coils and for displaying the signal status via LED. The CPV-... valves are activated via automatic current reduction, which results in less power consumption and heat emission. 32 digital inputs and outputs or 32 solenoid coils can be connected via a serial CP string extension.

The CPV fieldbus node is available in three sizes, with identical performance characteristics:

- CPV10
- CPV14
- CPV18

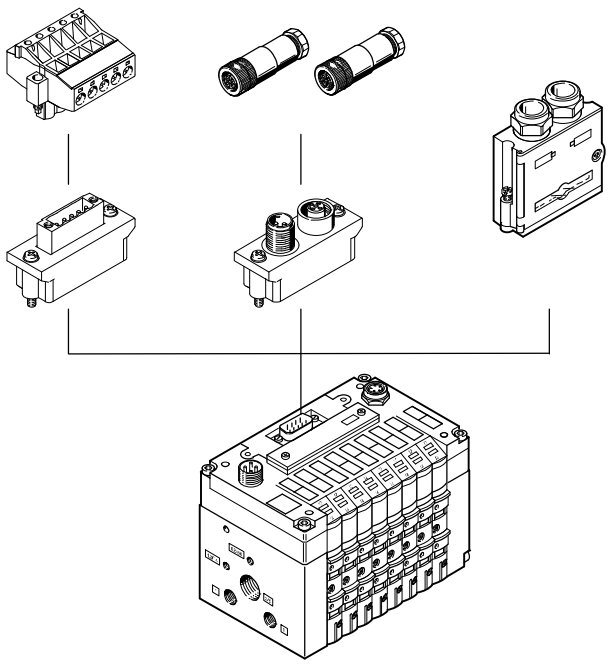
Application

Bus connection

Screw terminals

Plug connector 2xM12

Sub-D fieldbus plug



Sub-D socket

- 9-pin Sub-D socket
- Installation with IP65 protection

The bus connection is established via a 9 pin Sub-D socket with a typical PROFIBUS allocation (to EN 50170). The bus connector plug (with protection class IP65 from Festo or IP20 from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable. An active bus terminal can be connected using the integrated DIL switch. The Sub-D interface is designed for the activation of network components via a fibre optic cable connection.

M12 adapter

- Plug connector 2xM12
- Installation with IP65 protection

Alternatively the bus connection can be established via a 2x M12 adapter (A-coded).

Screw terminals

- 5-pin screw terminal strip

for installation in protected environments (IP20). The bus connection is established via a 5-pin row. If the valve terminal is ordered with this bus connection, the 5-pin screw terminal strip will also be supplied. It is designed with double screw terminals for the incoming and the outgoing bus cable. This connection technology provides a T-distributor function.

Fieldbus Direct, CPVSC1-AE16-DP

Technical data – Fieldbus node CPVSC1-AE16-DP

CPV-SC fieldbus node for communication between a CPV-SC valve terminal and a fieldbus master. The fieldbus node is used for activation of a CPV-SC valve terminal with up to 16 solenoid coils on max. 16 valve positions and for displaying the signal status via LED.
The CPV-SC... valves are activated via automatic current reduction, which results in less power consumption and heat emission. 32 digital inputs and outputs can be connected via a serial CP string extension.

Application

Bus connection

The bus connection is established via a 9 pin Sub-D socket with a typical PROFIBUS allocation (to EN 50170).
The bus connector plug facilitates the connection of an incoming and an outgoing bus cable. There is no internal bus terminating resistor.

Condition monitoring

Condition monitoring supports preventative maintenance which is part of the function chain in automation systems.
Each valve is assigned a switching cycle counter that automatically registers movements of the system components.
Once a maximum number of activations is reached, a message is sent to the controller via PROFIBUS and maintenance can be started. In the same way condition monitoring supports the determining of service intervals for the function chain.
All movements immediately after installation are registered.

Fieldbus Direct, CPV-DN2

Technical data – Fieldbus node CPV-DN2

CPV fieldbus node for communication between a CPV valve terminal and a fieldbus master. The fieldbus node is used for activation of a CPV valve terminal with 8 valve slices and 16 solenoid coils and for displaying the signal status via LED.
The CPV-... valves are activated via automatic current reduction, which results in less power consumption and heat emission. 16 digital inputs and 8 digital outputs or 16 solenoid coils can be connected via a serial CP string extension.
The CPV fieldbus node supports the DeviceNet protocol and conforms to the device profile of the pneumatic valve.
The CPV fieldbus node is available in three sizes, with identical performance characteristics:

- CPV10
- CPV14
- CPV18

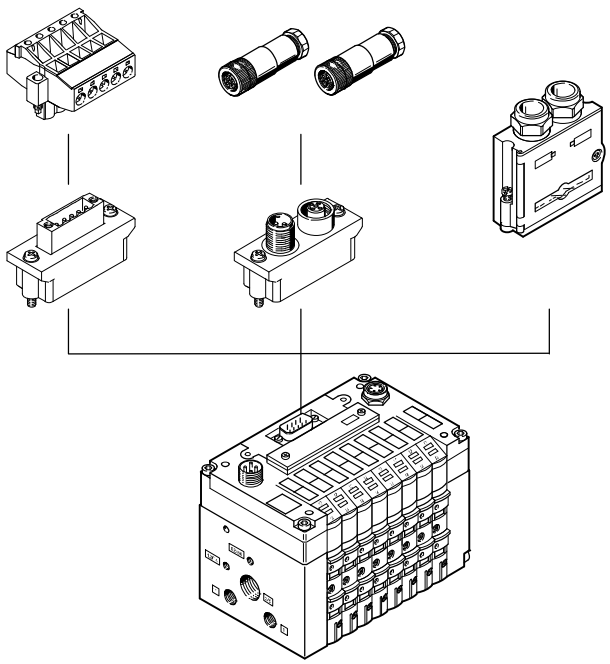
Application

Bus connection

Screw terminals

Plug connector 2xM12

Sub-D fieldbus plug



Sub-D socket

- 9-pin Sub-D socket
- Installation with IP65 protection

The bus connection is established via a 9 pin Sub-D socket with a typical PROFIBUS allocation (to EN 50170). The bus connector plug (with protection class IP65 from Festo or IP20 from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable. An active bus terminal can be connected using the integrated DIL switch. The Sub-D interface is designed for the activation of network components via a fibre optic cable connection.

M12 adapter

- Plug connector 2xM12
- Installation with IP65 protection

Alternatively the bus connection can be established via a 2x M12 adapter (A-coded).

Screw terminals

- 5-pin screw terminal strip

for installation in protected environments (IP20). The bus connection is established via a 5-pin row. If the valve terminal is ordered with this bus connection, the 5-pin screw terminal strip will also be supplied. It is designed with double screw terminals for the incoming and the outgoing bus cable. This connection technology provides a T-distributor function.

Condition monitoring

Condition monitoring supports preventative maintenance which is part of the function chain in automation systems.
Each valve is assigned a switching cycle counter that automatically registers movements of the system components.
Once a maximum number of activations is reached, a message is sent to the controller via DeviceNet and maintenance can be started. In the same way condition monitoring supports the determining of service intervals for the function chain.
All movements immediately after installation are registered.

Fieldbus Direct, CPV-DN3-8

Technical data – Fieldbus node CPV-DN3-8

CPV fieldbus node according to the CP system with Specification “B” for communication between a CPV valve terminal and a fieldbus master. The fieldbus node is used for activation of a CPV valve terminal with 8 valve slices and 16 solenoid coils and for displaying the signal status via LED. The CPV-... valves are activated via automatic current reduction, which results in less power consumption and heat emission. 32 digital inputs and outputs or 32 solenoid coils can be connected via a serial CPI string extension.

The CPV fieldbus node is available in three sizes, with identical performance characteristics:

- CPV10
- CPV14
- CPV18

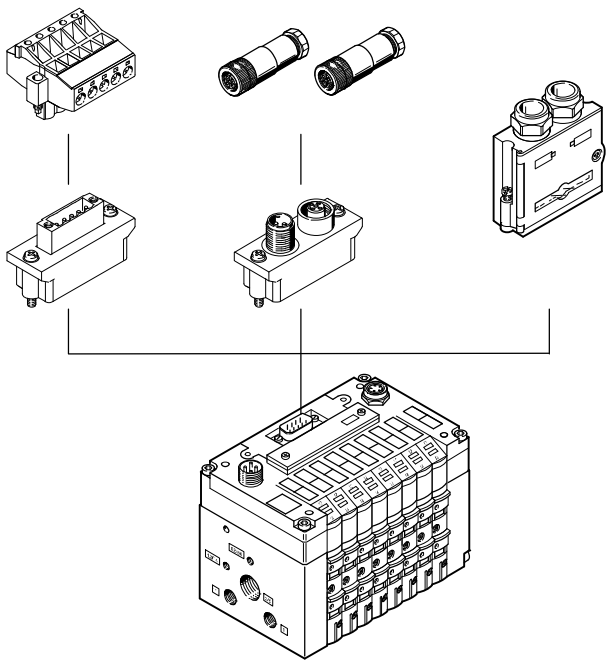
Application

Bus connection

Screw terminals

Plug connector 2xM12

Sub-D fieldbus plug



Sub-D socket

- 9-pin Sub-D socket
- Installation with IP65 protection

The bus connection is established via a 9-pin Sub-D socket. The bus connector plug (with protection class IP65 from Festo or IP20 from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable. An active bus terminal can be connected using the integrated DIL switch. The Sub-D interface is designed for the activation of network components via a fibre optic cable connection.

M12 adapter

- Plug connector 2xM12
- Installation with IP65 protection

Alternatively the bus connection can be established via a 2x M12 adapter (B-coded).

Screw terminals

5-pin screw terminal strip for installation in protected environments (IP20). The bus connection is established via a 5-pin row. If the valve terminal is ordered with this bus connection, the 5-pin screw terminal strip will also be supplied. It is designed with double screw terminals for the incoming and the outgoing bus cable. This connection technology provides a T-distributor function.

Condition monitoring

Condition monitoring supports preventative maintenance which is part of the function chain in automation systems.
Each valve is assigned a switching cycle counter that automatically registers movements of the system components.
Once a maximum number of activations is reached, a message is sent to the controller via DeviceNet and maintenance can be started. In the same way condition monitoring supports the determining of service intervals for the function chain.
All movements immediately after installation are registered.

Fieldbus Direct, CPV-CO2

Technical data – Fieldbus node CPV-CO2

CANopen

CPV fieldbus node for communication between a CPV valve terminal and a fieldbus master. The fieldbus node is used for activation of a CPV valve terminal with 8 valve slices and 16 solenoid coils and for displaying the signal status via LED.
The CPV-... valves are activated via automatic current reduction, which results in less power consumption and heat emission. 16 digital inputs and 8 digital outputs or 16 solenoid coils can be connected via a serial CP string extension.

The CPV fieldbus node is available in three sizes, with identical performance characteristics:
- CPV10
- CPV14
- CPV18

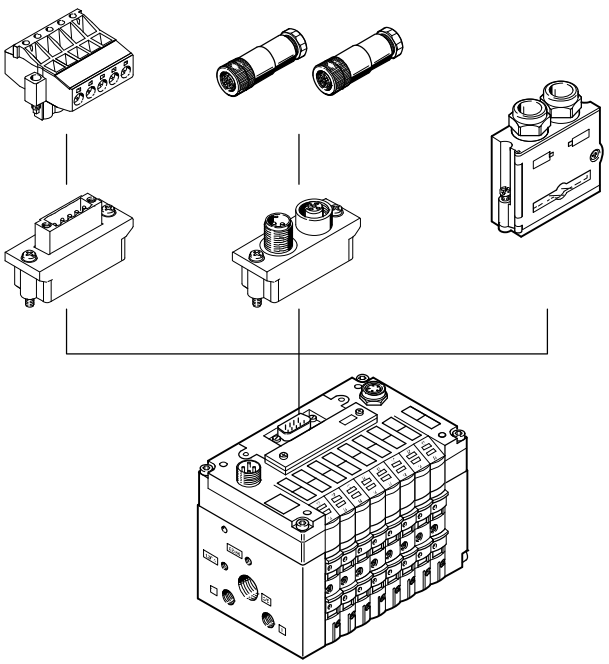
Application

Bus connection

Screw terminals

Plug connector 2xM12

Sub-D fieldbus plug



The branch line length does not apply to any type of connection used.

Screw terminals
- 5-pin screw terminal strip
- For installations in protected environments (IP20)

The bus connection is established via a 5-pin row.
If the valve terminal is ordered with this bus connection, the 5-pin screw terminal strip will also be supplied. It is designed with double screw terminals for the incoming and the outgoing bus cable. This connection technology provides a T-distributor function.

Plug connector 2xM12
- Plug connector 2xM12
- Installation with IP65 protection

The bus connection is established via an M12 plug and socket.
The bus connection fulfils the requirement of a T-distributor, this means that the CPV valve terminal can be disconnected from the bus without interrupting the bus.

Sub-D fieldbus plug
- 9-pin Sub-D plug
- Installation with IP65 protection

The bus connection is established via a 9-pin Sub-D plug as per the CAN in Automation (CiA) specification DS102 with additional 24 V CAN transceiver supply (option as per DS102). The bus connector plug facilitates the connection of an incoming and an outgoing bus cable. There are spring-loaded terminals for the four wires (CAN_L, CAN_H, 24 V, 0 V) of the incoming and outgoing bus cable.

Condition monitoring

Condition monitoring supports preventative maintenance which is part of the function chain in automation systems.
Each valve is assigned a switching cycle counter that automatically registers movements of the system components.
Once a maximum number of activations is reached, a message is sent to the controller via CANopen and maintenance can be started. In the same way condition monitoring supports the determining of service intervals for the function chain.
All movements immediately after installation are registered.

Fieldbus Direct, CPV-CO3-8

Technical data – Fieldbus node CPV-CO3-8

CPV fieldbus node according to the CP system with Specification “B” (enhanced functionality) for communication between a CPV valve terminal and a fieldbus master. The fieldbus node is used for activation of a CPV valve terminal with 8 valve slices and 16 solenoid coils and for displaying the signal status via LED.
The CPV-... valves are activated via automatic current reduction, which results in less power consumption and heat emission. 32 digital inputs and outputs or 32 solenoid coils can be connected via a serial CPI string extension.

The CPV fieldbus node is available in three sizes, with identical performance characteristics:
- CPV10
- CPV14
- CPV18

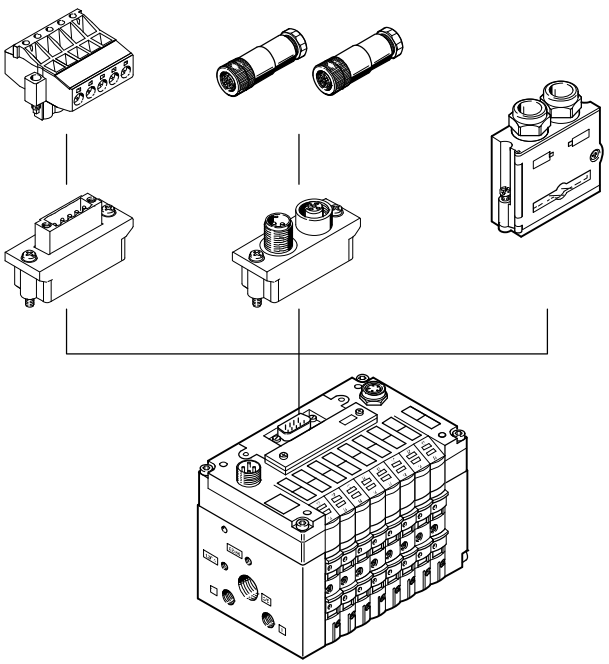
Application

Bus connection

Screw terminals

Plug connector 2xM12

Sub-D fieldbus plug



The branch line length does not apply to any type of connection used.

Screw terminals
- 5-pin screw terminal strip
- For installation in protected environments (IP20)

The bus connection is established via a 5-pin row.
If the valve terminal is ordered with this bus connection, the 5-pin screw terminal strip will also be supplied. It is designed with double screw terminals for the incoming and the outgoing bus cable. This connection technology provides a T-distributor function.

Plug connector 2xM12
- Plug connector 2xM12
- Installation with IP65 protection

The bus connection is established via an M12 plug and socket.
The bus connection fulfils the requirement of a T-distributor, which means that the CPV valve terminal can be disconnected from the bus without interrupting the bus.

Sub-D fieldbus plug
- 9-pin Sub-D plug
- Installation with IP65 protection

The bus connection is established via a 9-pin Sub-D plug as per the CAN in Automation (CiA) specification DS102 with additional 24 V CAN transceiver supply (option as per DS102). The bus connector plug facilitates the connection of an incoming and an outgoing bus cable. There are spring-loaded terminals for the four wires (CAN_L, CAN_H, 24 V, 0 V) of the incoming and outgoing bus cable.

Condition monitoring

Condition monitoring supports preventative maintenance which is part of the function chain in automation systems.
Each valve is assigned a switching cycle counter that automatically registers movements of the system components.
Once a maximum number of activations is reached, a message is sent to the controller via CANopen and maintenance can be started. In the same way condition monitoring supports the determining of service intervals for the function chain.
All movements immediately after installation are registered.

CPV fieldbus node for communication between a CPV valve terminal and an INTERBUS master. The fieldbus node is used for activation of a CPV valve terminal with 8 valve slices and 16 solenoid coils and for displaying the signal status via LED.
The CPV-... valves are activated via automatic current reduction, which results in less power consumption and heat emission. 16 digital inputs and 8 digital outputs or 16 solenoid coils can be connected via a serial CP string extension.
The CPV fieldbus node IB supports the INTERBUS fieldbus protocol and represents a remote bus station.
The CPV fieldbus node is available in three sizes, with identical performance characteristics:

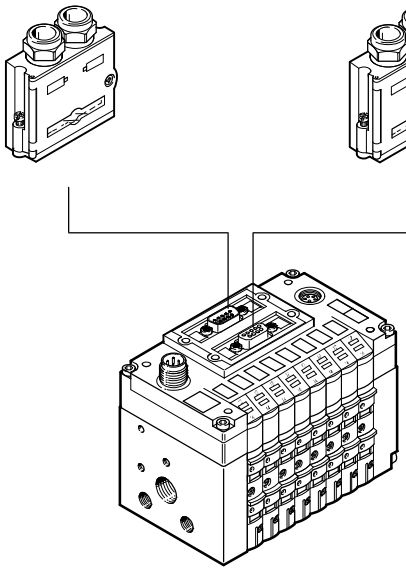
- CPV10
- CPV14
- CPV18

Application

Bus connection

Sub-D socket
INTERBUS incoming

Sub-D plug
INTERBUS outgoing



The bus connection is established via a 9-pin Sub-D socket and a 9-pin Sub-D plug with a typical INTERBUS pin allocation.
The bus connector plugs (with protection class IP65 from Festo or IP20 from other manufacturers) facilitate the connection of the incoming and the outgoing bus cable. The outgoing bus plug contains the typical INTERBUS RBST bridge for identification of the outgoing bus connection.

The Sub-D interfaces are designed for the control of network components using a fibre optic cable connection.

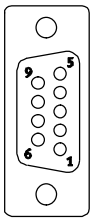
8	n.c.	Not connected
9	n.c.	Not connected
Housing	Screened	Connection to functional earth via R/C combination

Pin allocation for INTERBUS interface, outgoing (viewed on socket)



Pin	Signal	Description
1	DO2	Data out
2	/DI2	Data in
3	GND	Reference conductor/ground
4	n.c.	Not connected
5	+5 V	Station detection[1)]
6	/DO2	Data out inverse
7	/DI2	Data in inverse
8	n.c.	Not connected
9	RBST	Station detection[1)]
Housing	Screened	Connection to functional earth via R/C combination

1) The incoming interface is electrically isolated from the CPX peripherals. The plug housing is connected to the FE of the CPX terminal via an R/C combination.
The CPX terminal contains the protocol chip SUPI 3 OPC. This ensures automatic detection of additional connected INTERBUS stations. There is therefore no need for a bridge between pin 5 and pin 9.

Fieldbus Direct, CPV-IP

Technical data – Fieldbus node CPV-IP

BECKHOFF

CPV fieldbus node for communication between a CPV valve terminal and an IP-Link coupler box. The fieldbus node is used for activation of a CPV valve terminal with 8 valve slices and 16 solenoid coils and for displaying the signal status via LED.
The CPV-... valves are activated via automatic current reduction, which results in less power consumption and heat emission.
The CPV fieldbus node supports the fieldbus protocol IP-Link.
The CPV fieldbus node is available in two sizes, with identical performance characteristics:

- CPV10
- CPV14

Application

Bus connection

The bus connection is established using two IP-Link fibre optic cable connectors.

The bus connector plugs (with protection class IP65) facilitate the connection of the incoming and outgoing fibre optic cable (FOC).

Power supply

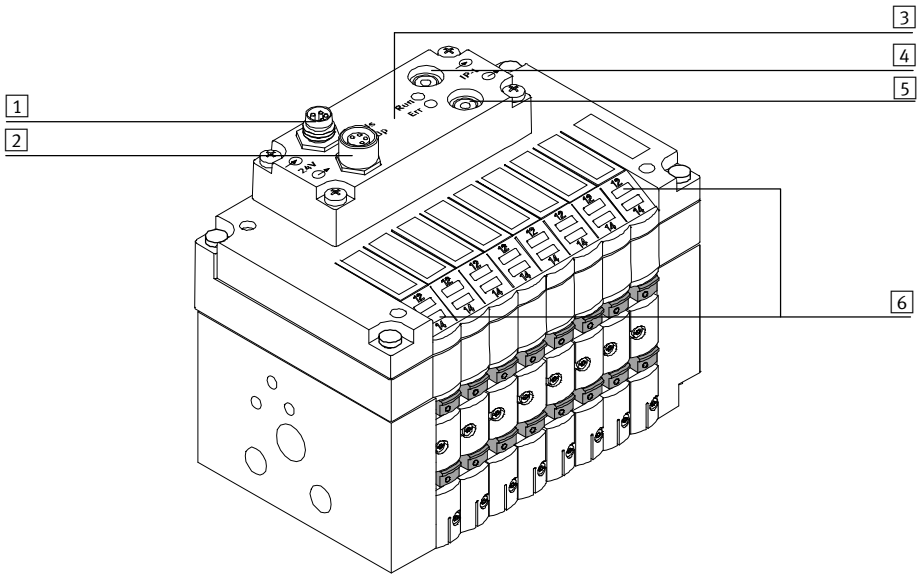
The power is supplied via a 4-pin M8 connection (socket). The supply to the internal logic is fully electrically isolated from the supply to the solenoid coils.

The second M8 connection (pin) enables power to be supplied to additional CPV IP-Link valve terminals and other IP-Link modules.

General technical data				
Type			**CPV10-GE-IP-8**	**CPV14-GE-IP-8**
Fieldbus interface			IP-Link Incoming, outgoing	
Electrical isolation of the fieldbus interface			FOC	
CP string extension			No	
Baud rates		[kbps]	2000	
Data model	Compact		16 outputs	
Configuration support	PROFIBUS		GSD file	
	INTERBUS		Not necessary	
	CANopen		EDS file	
	DeviceNet		EDS file	
Max. no. of solenoid coils			16	
LED displays (bus-specific)	US		Operating voltage of internal logic	
	UP		Operating voltage of valves	
	RUN		Bus active	
	ERR		Data transmission error	
Product identification			Product family 4: Valves	
Device-specific diagnostics			IE4404	
Parameterisation			Via register communication: watchdog setting for coils 1 ... 16	
Operating voltage	Nominal value	[V DC]	24, reverse polarity protected	
	Permissible range	[V]	20.4 ... 28.8	
	Power failure bridging	[ms]	10	
	Residual ripple	[Vss]	4	
Current consumption	Logic	[mA]	Max. 100	
	Valves		Depending on valve type	
Protection class to EN 60529			IP65	
Materials	Housing		Die-cast aluminium	
	Cover		Reinforced polyamide	
	Seals		Nitrile rubber, polychloroprene rubber	
Dimensions			➔ Internet: cpv	
Weight				
Technical data on valves				

Operating and environmental conditions		
Ambient temperature	[°C]	–5 ... +50
Storage temperature	[°C]	–20 ... +70
Certification		cULus recognized (OL)
CE symbol (see declaration of conformity)		In accordance with EU EMC directive
Note on materials		RoHS-compliant

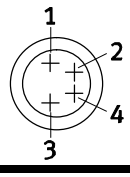
Connection and display components



1 Connection for power supply, incoming (M8, 4-pin, plug)
2 Connection for power supply, outgoing (M8, 4-pin, socket)
3 LEDs:
- US: Operating voltage for electronics (green)
- UP: Load voltage for valves (green)
- RUN: Bus active (green)
- ERR: Error (red)

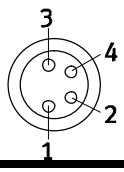
4 Fieldbus connection, incoming (IP-Link fibre optic cable IP65 socket)
5 Fieldbus connection, outgoing (IP-Link fibre optic cable IP65 socket)
6 LEDs (yellow) for signal status display of CPV solenoid coils

Power supply, incoming



Pin	Signal
1	24 V DC operating voltage for electronics (US)
2	24 V DC load voltage for valves (UP)
3	0 V electronics (US)
4	0 V valves (UP)

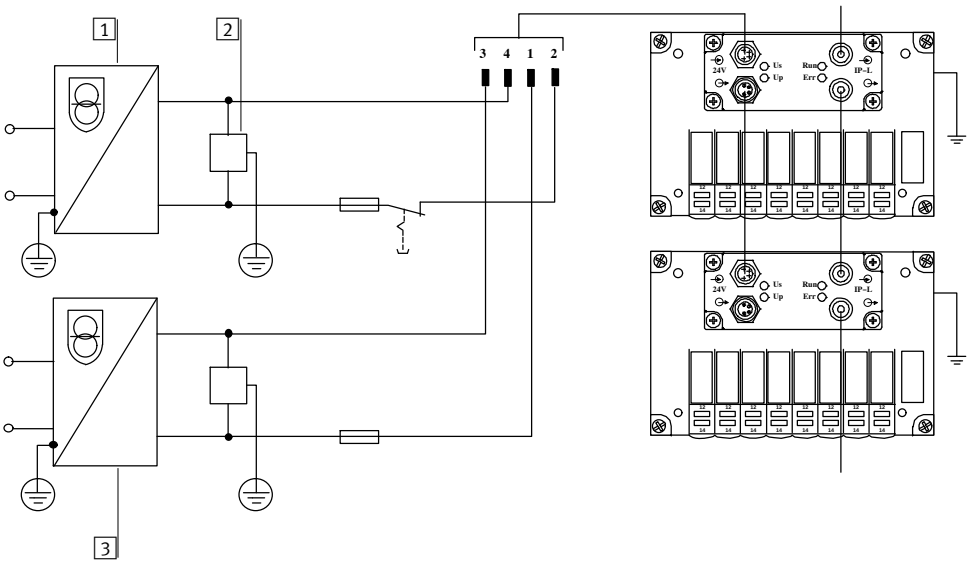
Power supply, outgoing



Pin	Signal
1	24 V DC operating voltage for electronics (US)
2	24 V DC load voltage for valves (UP)
3	0 V electronics (US)
4	0 V valves (UP)

Equipotential bonding

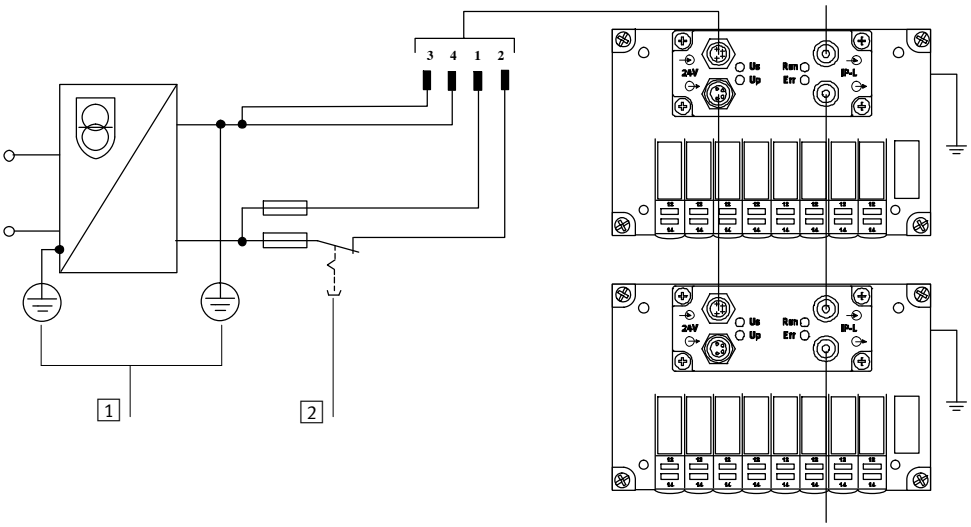
Example of connection with electrical isolation of operating and load voltage with 2 PELV power supply units



1 Power supply unit for load voltage
2 Device for isolation monitoring
3 Power supply unit for operating voltage

CPV Direct is prepared for the connection with electrical isolation of operating and load voltage.

Example of connection with PELV power supply unit and equipotential bonding



1 PE and equipotential bonding
2 Load voltage (can be disconnected separately) plus external fuses

The CPV valve terminal has an earth terminal for equipotential bonding on the end plate.

Fieldbus Direct, CPV-CC-8

Technical data – Fieldbus node CPV-CC-8

CPV fieldbus node for communication between a CPV valve terminal and a higher-order master for Control & Communication-Link (CC-Link) from Mitsubishi. The fieldbus node is used for activation of a CPV valve terminal with 8 valve slices and 16 solenoid coils and for displaying the signal status via LED.
The CPV-... valves are activated via automatic current reduction, which results in less power consumption and heat emission. A CP input module with 16 digital inputs can be connected via a serial CP string extension.
The CPV fieldbus node is available in three sizes, with identical performance characteristics:

- CPV10
- CPV14
- CPV18

Application

Bus connection

The bus connection can be selected when ordering and is established by means of:

- a terminal strip with IP20 protection
- a Sub-D plug with IP65 protection from Festo
- a Sub-D plug with IP20 protection from other manufacturers

All connection types have an integrated T-distributor function and thus support the connection of an incoming and outgoing bus cable.
The integrated interface with RS 485 transmission technology is designed for the typical CC-Link 3-wire connection technology (in accordance with CLPA CC-Link Spec. V1.11).

CC-Link implementation

The CPV fieldbus node supports one station per slave.
Cyclical data transmission for the solenoid coils, digital inputs and status information is conducted using the bit and word ranges (Rx/Ry/RWr/RWw).

Fieldbus Direct, CPV-CC-8

Technical data – Fieldbus node CPV-CC-8

General technical data					
Type			CPV10-GE-CC-8	CPV14-GE-CC-8	CPV18-GE-CC-8
Fieldbus interface			Either • 9-pin Sub-D socket • Screw terminal strip, 5-pin		
CP string extension			Yes 16 inputs (connection of an additional CP valve terminal or CP output module not possible)		
Baud rates		[kbps]	156 ... 10,000; set using DIL switch		
Addressing range			1 ... 64; set using DIL switch		
No. of stations per slave			1 station, Permanent setting		
Vendor code			0x0177		
Product identification			Machine type 0x3C		
LED displays (bus-specific)	RUN		Communication OK		
LED displays (bus-specific)	Pow/Err		Operating voltage/CRC error or communication error		
LED displays (product-specific)			Valve signal status		
Type of communication			Cyclical communication		
Max. no. of solenoid coils			16		
Max. no. of outputs			0		
Max. no. of inputs			16		
Device-specific diagnostics			• Short circuit/overload of inputs • Undervoltage of valve terminal • Undervoltage of sensor supply • Missing module on the CP string • Remote ready • Via status byte		
Parameterisation			Hold/clear via DIL switch		
Additional functions			8-bit system status in the bit range (Rx)		
Operating voltage	Nominal value	[V DC]	24, reverse polarity protected		
	Permissible range	[V]	20.4 ... 26.4		
	Power failure bridging	[ms]	20		
Current consumption		[mA]	Max. 200 + sensor supply		
Protection class to EN 60529			IP20, IP65 (Sub-D)		
Materials	Housing		Die-cast aluminium		
	Cover		Reinforced polyamide		
	Seals		Nitrile rubber, polychloroprene rubber		
Dimensions			➔ Internet: cpv

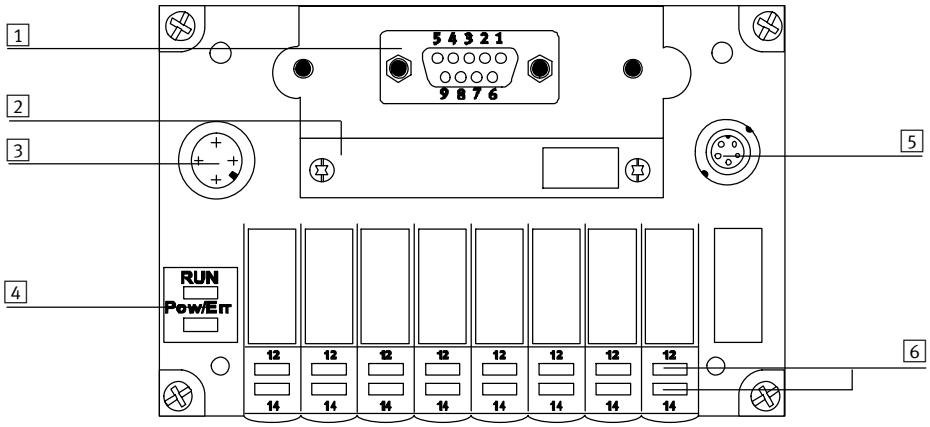
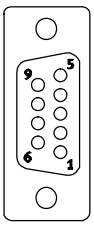
Connection and display components



1 Fieldbus connection, 9-pin Sub-D socket
2 Switch module (removable)
3 Connection for power supply (4-pin M12 plug, operating voltage for electronics/sensors, load voltage for CP valves)
4 LEDs:
- Data communication (RUN)
- Operating voltage/error (Pow/Err)

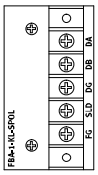
5 CP extension connection
6 Signal status displays of CP solenoid coils

Pin allocation for Sub-D interface (socket view)



Pin	Signal	Description
1	n.c.	Not connected
2	DA	Data A
3	DG	Data reference potential
4	n.c.	Not connected
5	n.c.	FE via R/C combination (not used with CC-Link: connection via R/C combination to FE (1 Mohm/220 nF))
6	n.c.	Not connected
7	CAN_H	Data B
8	n.c.	Not connected
9	n.c.	Not connected
Housing	SLD	Screened

Pin allocation for terminal strip



Pin	Signal	Description
1	FG	Functional earth/housing
2	SLD	Screened
3	DG	Data reference potential
4	DB	Data B
5	DA	Data A
