

Adsorption dryers PDAD

FESTO

Adsorption dryers PDAD

Key features

FESTO

Description	Areas of application	Features/Advantages/Benefits	
<p>Cold-regenerating adsorption dryer with defined pressure dew point and high flow rate for decentralised compressed air drying</p> <p>The utilisation of adsorption dryers is always required when pressure dew points of less than -20 °C need to be achieved reliably.</p>	<ul style="list-style-type: none"> • Sensors • Semiconductor manufacturing • Manufacture of foils and packaging • Transportation of powder • Dental technology • Painting systems • Food industry • Pharmaceuticals 	<ul style="list-style-type: none"> • The solution for dry and clean compressed air • Greater service life of pneumatic components • Pressure dew point -40 °C or -70 °C (with reduced flow rate) • Additional filtering of oil and particulate • Produced for decentralised compressed air drying 	<ul style="list-style-type: none"> • High flow rate performance up to 2,400 l/min • Selectable voltage for electrical connection • Low purge air consumption and noise levels • Complies with air purity class at the output up to 2:1:2 in accordance with ISO 8573-1:2010 at a pressure dew point of -70 °C

Lower costs	Reduced maintenance costs	Flexible installation	User-friendly
<p>Controlled, decentralised drying directly at the consuming device is advantageous because only the actually required amount of dry air is prepared. This reduces energy costs, and prevents corrosion, thus extending the service life of components.</p>	<p>Complete cartridges containing drying agent allow fast and easy replacement of the drying agent. Pre-filled cartridges guarantee fast and clean cartridge replacement.</p> <p>Maintenance costs are reduced because the integrated secondary filter (grade of filtration $1\text{ }\mu\text{m}$) in every cartridge retains the abraded particles of the drying agent.</p>	<p>Space-optimised and flexible mounting thanks to the integrated secondary filter.</p>	<p>A clear operating display shows drying cycles and service functions.</p>

Function	Notes		
<p>The air stream is passed through the supplied prefilter, a micro filter with grade of filtration $0.01\text{ }\mu\text{m}$. It protects the drying agents from contaminating dirt and oil particles (oil significantly reduces the service life of the drying agent). The adsorption dryer consists of two cartridges (four in the case of the PDAD-100) filled with drying agent. Moist compressed air flows</p>	<p>through the two cartridges alternately, and the water from the air accumulates on the surface of the drying agent. After a predetermined period of time, the flow of air is switched to the other cartridge and a portion of the dried air (purge air) is used to regenerate the drying agent in the first cartridge. The purge air escapes into the atmosphere.</p>	<p>The drying agent has a service life of approx. 12,000 operating hours. The average purge air requirement under nominal conditions (7 bar/25 °C) is approx. 17%. If the dryer is used under different operating conditions, the input air/purge air ratio may change as the purge air</p>	<p>consumption is only dependent on the input air and not on the used output flow rate.</p> <p>The volume of purge air must therefore be adapted to different supply pressures by replacing the air blast nozzle (air nozzle set with 3 air blast nozzles ADNA → 9).</p>

Technical data

Function

- - Flow rate
40 ... 2,400 l/min

- - Temperature range
+2 ... +50 °C

- - Supply pressure
4 ... 16 bar

Pressure dew point
-40 °C or -70 °C

General technical data						
Type	PDAD-09	PDAD-13	PDAD-22	PDAD-51	PDAD-73	PDAD-100
Pneumatic connection 1, 2	G3/8				G1/2	
Design	Cold regenerating adsorption dryer					
Type of mounting	With accessories					
Mounting position	Upright					
	Horizontal					
Pressure dew point [°C]	-40					
	-70 (with reduced flow rate)					
Air purity class at the output	Compressed air in accordance with ISO 8573-1:2010 [2:2:2] (at a pressure dew point of -40 °C)					
	Compressed air in accordance with ISO 8573-1:2010 [2:1:2] (at a pressure dew point of -70 °C)					
Electrical data						
Electrical connection	2 connections (12 ... 24 V DC or 110 ... 240 V AC) for power supply sockets					
Power consumption	DC	Approx. 9.6 W (24 V/0.4 A typ.)				
	AC	Approx. 16 VA (230 V/0.07 A typ.)				
Protection class	IP65 (to DIN 40050)					

Operating and environmental conditions						
Type	PDAD-09	PDAD-13	PDAD-22	PDAD-51	PDAD-73	PDAD-100
Supply pressure [bar]	4 ... 16					
Operating medium	Compressed air in accordance with ISO 8573-1:2010 [6:4:4]					
Note on operating/pilot medium	Operation with lubricated medium not possible					
Ambient temperature [°C]	+5 ... +50					
Temperature of medium [°C]	+2 ... +50					
Storage temperature [°C]	-20 ... +60					
Corrosion resistance class CRC ¹⁾	2					
CE mark (see declaration of conformity) ³⁾	In accordance with EU EMC directive ²⁾					
	In accordance with EU Low Voltage Directive					
	In accordance with EU Pressure Equipment Directive					
KC marking	KC EMC					

- Corrosion resistance class CRC 2 to Festo standard FN 940070
Moderate corrosion stress. Indoor applications in which condensation may occur. External visible parts with primarily decorative requirements for the surface and which are in direct contact with the ambient atmosphere typical for industrial applications.
- For information about the applicability of the component see the manufacturer's EC declaration of conformity at: www.festo.com/sp → Certificates.
If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.
- Additional information www.festo.com/sp → Certificates.

Adsorption dryers PDAD

Technical data

Materials	
Housing	Wrought aluminium alloy
Note on materials	RoHS-compliant

 Note

Please do not use the average consumption values (flow rate) as your guide when setting up the dryer, instead use

- the inlet pressure of the dryer,
- the peak value for the flow rate and
- the maximum permissible supply temperature.

The adsorption dryers are designed for continuous operation. Intensely pulsed or intermittent operation leads to the premature aging of and/or damage to the drying agent and thus to the failure of the dryer. If the adsorption dryer PDAD is nonetheless to be used in pulsed or intermittent mode the use of buffer

reservoirs, through which the compressed air flows, is recommended for smoothing the pressure peaks. Depending on the application these can be mounted upstream and/or downstream of the dryer. The volume of a reservoir should be approx. 50% of the flow rate for one minute.

 Note

On delivery the adsorption dryer PDAD is configured with an air nozzle for a supply pressure of 7 ... 9 bar. If a different supply pressure is used, the air nozzle must be replaced. The set containing the other air nozzles must be ordered separately → 9.
