

Wide range of configuration options  
→ [www.festo.com/en/engineering](http://www.festo.com/en/engineering)

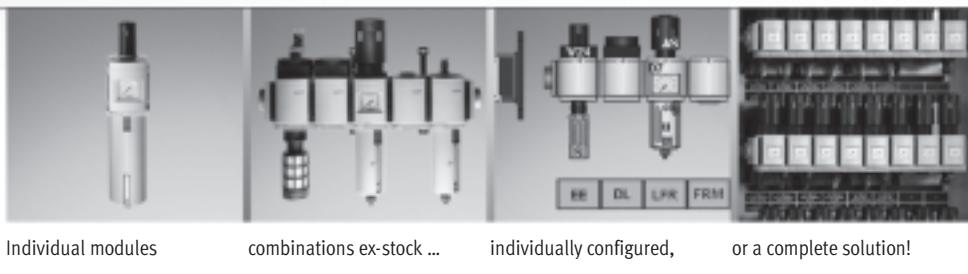

- Easy to assemble thanks to a modular structure
- Three sizes:
  - MS4 – grid dimension 40 mm
  - MS6 – grid dimension 62 mm
  - MS12 – grid dimension 124 mm
- 8 connection sizes: G<sup>1</sup>/<sub>8</sub> to G<sub>2</sub>
- Modern design
- Compact with high flow rates: up to 22,000 l/min with size MS12
- Integrated safety functions
- Broad range of functions: Individual components, preassembled combinations ex-stock, application-specific combinations or complete turnkey solutions

Specified types in accordance with ATEX directive for potentially explosive atmospheres

## Made-to-measure compressed air – MS series service units

Whether in terms of product range, functionality of components or variety of services, the MS series from Festo offers a fully integrated concept for application-specific solutions to your compressed-air preparation requirements. And the newly integrated remote adjustment and remote monitoring functions open up new dimensions for fault-free operation of your systems.

Individual modules

combinations ex-stock ...

individually configured,

or a complete solution!

### Solutions for every application

From the individual component through preassembled combinations ex-stock and application-specific combinations to turnkey complete solutions.

### Simplicity of selection

The choice is yours: using the FAST range and its free configurator you can easily configure your individual service units or entire combinations. Within no time at all you will have a solution perfectly tailored to your requirements, ready assembled and tested upon delivery. Alternatively this brochure provides an overview of the full MS series range and its almost limitless possibilities. You can conveniently import the appropriate CAD files directly from the electronic catalogue at any time.

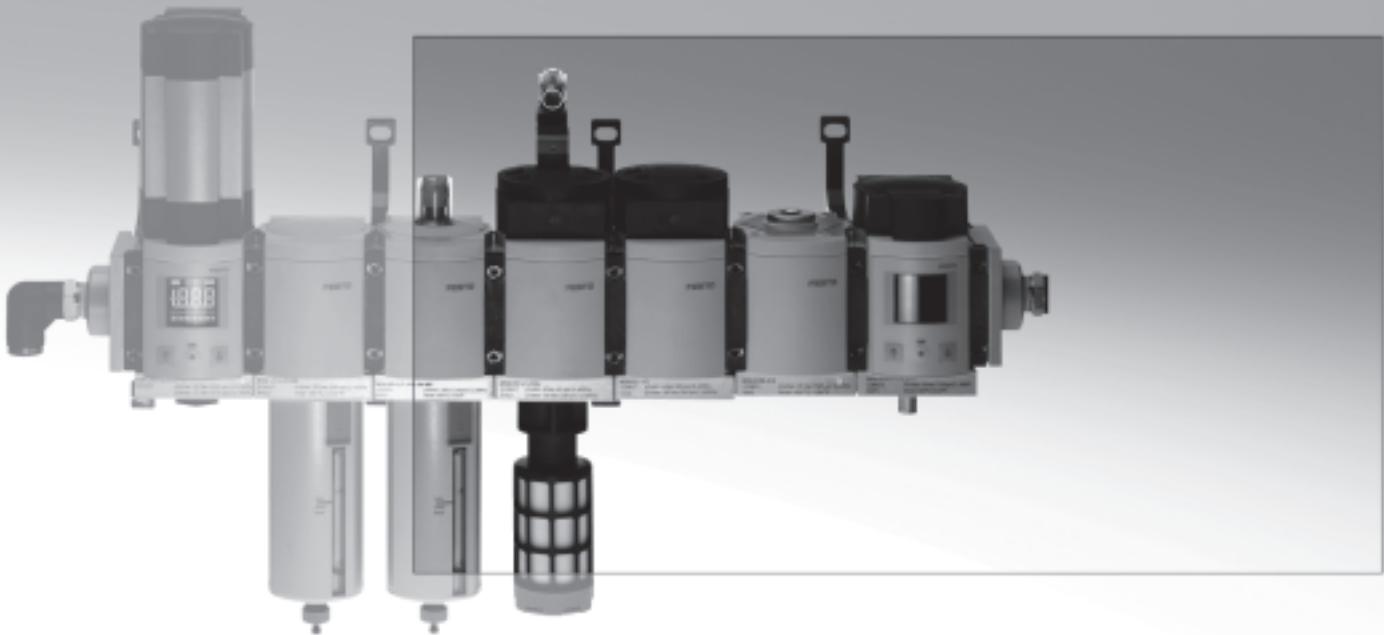

### Maximum machine availability

#### through controlled processes

Reliable compressed air supply to systems. Made possible by the ultra-modern functional modules of the MS series with integrated sensors and remote adjustment function.

### Performance that yields its own rewards

Maximum flow rates combined with minimum space requirement mean a smaller size can often be used than would be the case with comparable service units. Flow rates up to 22,000 l/min with MS12. This ensures an adequate supply to your actuators and delivers a flow rate performance similar to that of centralised compressed air preparation.

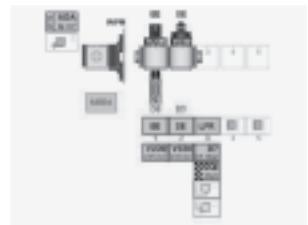

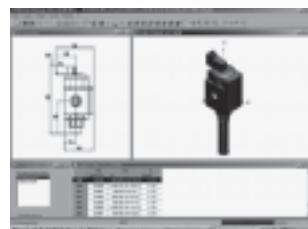

#### **Freely combinable functional modules**

All functions of compressed air preparation are brought together in one product range: pressure regulators, on/off and soft/start valves, filters, dryers, sensors and lubricators offer the right solution for every task. Freely combinable thanks to their modular structure.

#### **Free services included**

CAD models and a configurator for easy selection of application-specific individual devices and combinations (MSB4 and MSB6) can be found under [www.festo.com/ms](http://www.festo.com/ms)

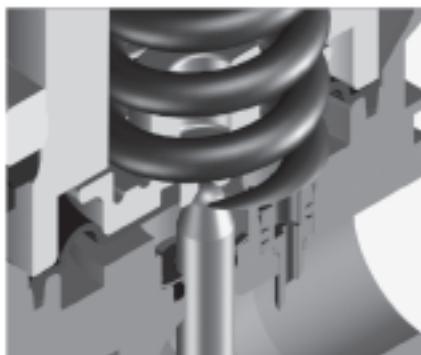

## MS series service units – more than standard!

### Smartmount connection system

Simply connect the high-precision die-cast aluminium housings in series – no intermediate blocks are needed. The positive-locking connection needs just one seal between the individual service units for leak-free manifold mounting.

Time-saving replacement: individual modules can be replaced without dismantling the entire unit. Easy installation with the wall mounting bracket WPM: simply attach the bracket to the wall and then mount the assembled combination – finished!

### Rollflex membrane

The new MS regulator family with fabric-reinforced bellows dramatically increases flow rate performance – and also service life. The end result is an even more reliable compressed air supply for your actuators.

### One Seal return venting

Avoid the “Monday morning effect” with integrated return venting. This system also saves the return flow components thanks to the return venting function of the regulator via the main seat integrated as standard.

#### Integrated safety and reliability

The locking filter bowls – optionally in metal design – offer maximum safety for man and machine while the lockable valves fitted as standard provide maximum control of the operating

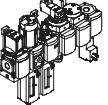

pressure. Also available soft-start valves, filter pollution indicator and fully automatic condensate drain for reliable operation of your system.

Technical data

## Function

With condensate drain  
manual rotary

With condensate drain  
fully automatic

- Flow rate  
800 ... 4,800 l/min
- Temperature range  
-10 ... +60 °C
- Input pressure  
1.5 ... 20 bar

- Filter, regulator and lubricator function in a single unit
- High flow rate and highly efficient removal of contaminants
- Good regulating characteristics with minimal pressure hysteresis
- Setting values are secured by locking the rotary knob
- Lockable rotary knob
- Two pressure regulation ranges: 0.3 ... 7 bar and 0.5 ... 12 bar
- Choice of filter cartridges: 5 µm or 40 µm
- With manual or integrated, fully automatic condensate drain

- On-off valve MS...-EM1 manually actuated
- Filter regulator MS...-LFR-D7
- Branching module MS...-FRM-Y with pressure switch without display
- Lubricator MS...-LOE-R
- Mounting bracket MS...-WP

- For filtered and lubricated compressed air
- Supply pressure can be opened and closed
- Output pressure is infinitely adjustable within the pressure regulation range
- The unit is vented when switched off
- Electrical pressure monitoring with adjustable switching pressure
- Removal of filtered and unlubricated compressed air at the branching module connections

## Function

With condensate drain  
manual rotary

- - Flow rate  
550 ... 2,300 l/min
- - Temperature range  
-10 ... +60 °C
- - Pressure regulation range  
4 ... 12 bar

With condensate drain  
fully automatic

- On-off valve MS...-EM1 manually actuated
- Filter regulator MS...-LFR-D7
- Lubricator MS...-LOE-R
- On-off valve MS...-EE-10V24 or MS...-EE-V24 solenoid actuated
- Soft-start valve MS...-DL pneumatically actuated
- Branching module MS...-FRM-Y with pressure switch without display
- Mounting bracket MS...-WP

- For filtered and lubricated compressed air
- Supply pressure can be opened and closed
- Output pressure is infinitely adjustable within the pressure regulation range
- Gradual pressure build-up prevents sudden, unpredictable movements
- To shut-off and vent the following device or the system
- Electrical pressure monitoring with adjustable switching pressure

## Function

With condensate drain  
manual rotary

- - Flow rate  
700 ... 3,100 l/min
- - Temperature range  
-10 ... +60 °C
- - Pressure regulation range  
4 ... 12 bar

With condensate drain  
fully automatic

- On-off valve MS...-EM1 manually actuated
- Filter regulator MS...-LFR-D7
- On-off valve MS...-EE-10V24 or MS...-EE-V24 solenoid actuated
- Soft-start valve MS...-DL pneumatically actuated
- Branching module MS...-FRM-Y with pressure switch without display
- Mounting bracket MS...-WP
- For filtered and unlubricated compressed air
- Supply pressure can be opened and closed
- Output pressure is infinitely adjustable within the pressure regulation range
- Gradual pressure build-up prevents sudden, unpredictable movements
- To shut-off and vent the following device or the system
- Electrical pressure monitoring with adjustable switching pressure

- On-off valve MS...-EM1 manually actuated
- Filter regulator MS...-LFR-D7
- On-off valve MS...-EE-10V24 or MS...-EE-V24 solenoid actuated
- Soft-start valve MS...-DL pneumatically actuated

## Filter regulators MS4/MS6-LFR, MS series

Technical data

### Function

Manual rotary condensate drain, with pressure gauge

Semi- or fully automatic condensate drain, with pressure gauge

With this device, the filter and pressure regulator are combined into a single unit. The sintered filter with water separator removes contamination, pipe sinter, rust and condensate from the compressed air.

-  - Flow rate  
850 ... 7,200 l/min

-  - Temperature range  
-10 ... +60 °C

-  - Input pressure  
0.8 ... 20 bar

-  - www.festo.com/en/  
Spare\_parts\_service

Wearing parts kits  
→ 3/2.12-11

- Good regulation characteristics with low hysteresis and primary pressure compensation
- Good particle and condensate separation
- Available with or without secondary venting

- High flow rates
- Directly actuated diaphragm regulator
- Four pressure regulation ranges: 0.3 ... 4 bar, 0.3 ... 7 bar, 0.5 ... 12 bar and 0.5 ... 16 bar
- Lockable rotary knob
- Two pressure gauge connections for different fitting options
- Return flow option for exhausting from output 2 to output 1
- Optional pressure sensor with display
- Choice of filter cartridges: 5 µm or 40 µm
- New filter cartridges → 3/2.31-19

The sintered filter with centrifugal separation removes contamination, rust and condensate from the compressed air. The filter cartridges are replaceable.

- Good particle and condensate separation
- High flow rate with minimal pressure drop
- Available with manual, semi-automatic, fully automatic or fully automatic, electrically actuated condensate drain
- Choice of filter cartridges: 5 µm or 40 µm
- Filter cartridges → 3/2.31-19

## Active carbon filters MS4/MS6-LFX, MS series

Technical data

Function

-  - Flow rate  
250 ... 1,300 l/min
-  - Temperature range  
-10 ... +60 °C
-  - Input pressure  
0 ... 20 bar

- Removal of liquid and gaseous oil particles from compressed air using active carbon
- Eliminates odours and vapours
- Prefiltration with micro filter MS-LFM-A, grade of filtration 0.01 µm, recommended
- Filter cartridges ➔ 3/2.31-19

### General technical data

Size	MS4	MS6

-  - Temperature range  
-10 ... +60 °C

-  - Input pressure  
0.8 ... 20 bar

Wearing parts kits  
→ 3/2.14-9

The pressure regulator maintains a constant working pressure (secondary side), regardless of the pressure variations in the system (primary side) and the air consumption.

- Good regulation characteristics with low hysteresis and primary pressure compensation
- High flow rate with minimal pressure drop
- Available with and without secondary venting
- Setting values are secured by locking the rotary knob
- Lockable rotary knob
- Four pressure regulation ranges: 0.3 ... 4 bar, 0.3 ... 7 bar, 0.5 ... 12 bar and 0.5 ... 16 bar
- Two pressure gauge connections for different fitting options
- Return flow option for exhausting from output 2 to output 1
- Optional pressure sensor with display
- Optional rotary knob pressure gauge for size MS4

→ 3/2.14-21

The pressure regulator is suitable for manifold assemblies with through air supply on both sides, for configuring a regulator manifold with separate, independent pressure regulation ranges. Pressure output is at the front or rear.

- Good regulation characteristics with low hysteresis and primary pressure compensation
- Manifold assembly with through air supply
- For configuring a regulator manifold with independent pressure regulation ranges
- Available with and without secondary venting
- Setting values are secured by locking the rotary knob
- Lockable rotary knob
- Four pressure regulation ranges: 0.3 ... 4 bar, 0.3 ... 7 bar, 0.5 ... 12 bar and 0.5 ... 16 bar
- Return flow option for exhausting from output 2 to output 1
- Optional pressure sensor with display

-  - Temperature range  
-10 ... +60 °C
-  - Input pressure  
1 ... 14 bar
-  - www.festo.com/en/  
Spare\_parts\_service

The precision pressure regulator is suitable for sensitive applications with a required pressure hysteresis of 0.02 bar.

- Good regulation characteristics with low hysteresis and primary pressure compensation
- High flow rate with minimal pressure drop
- Setting values are secured by locking the rotary knob
- Four pressure regulation ranges: 0.05 ... 0.7 bar, 0.05 ... 2.5 bar, 0.1 ... 4 bar and 0.1 ... 12 bar
- Optional pressure sensor with display

## Precision pressure regulators MS6-LRPB, MS series

Technical data

### Function

LRPB combination  
with through pressure supply for  
manifold assembly

-  - Flow rate  
1,600 ... 5,000 l/min

-  - Temperature range  
-10 ... +60 °C

-  - Input pressure  
1 ... 14 bar

-  - [www.festo.com/en/  
Spare\\_parts\\_service](http://www.festo.com/en/Spare_parts_service)

The precision pressure regulator is  
suitable for sensitive applications  
with a required pressure hysteresis  
0.02 bar.

- Good regulation characteristics with low hysteresis and primary pressure compensation
- Manifold assembly with through air supply
- For configuring a regulator manifold with independent pressure regulation ranges
- Setting values are secured by locking the rotary knob
- Four pressure regulation ranges: 0.05 ... 0.7 bar, 0.05 ... 2.5 bar, 0.1 ... 4 bar and 0.1 ... 12 bar
- Optional pressure sensor with display

## Electrical pressure regulators MS6-LRE, MS series

Technical data

### Function

with pressure gauge

with pressure gauge and integrated pressure sensor

### Note

The electrical pressure regulator is not suitable for the set-up of closed control loops.

- - Flow rate  
2,200 ... 7,500 l/min

- - Temperature range  
0 ... +50 °C

- - Input pressure  
0.8 ... 20 bar

The electrical pressure regulator maintains incoming compressed air at the set output pressure. It also maintains a constant output pressure independent of pressure fluctuations and air consumption.

The output pressure is set indirectly via an integrated electrical drive unit. The drive unit can be operated either with digital inputs via the M12 plug or

using the optional control and display unit.

The direction of rotation of the drive unit is thus pre-set, which makes adjustment of the output pressure in the rising or falling direction possible.

In the event of a power failure, the last drive unit or output pressure setting is saved. Pneumatic pressure regulation continues to function.

- Four pressure regulation ranges:  
0.3 ... 4 bar, 0.3 ... 7 bar,  
0.5 ... 12 bar and 0.5 ... 16 bar
- Optional control unit with display
- Optional integrated pressure sensor with electrical output
- Constant output pressure even in the event of a power failure thanks to the fail-safe function
- Available with or without secondary venting

Technical data

### Function

- - Flow rate  
1,100 ... 7,200 l/min
- - Temperature range  
-10 ... +60 °C
- - Input pressure  
1 ... 16 bar

The proportional lubricator adds a precision adjustable quantity of oil to the compressed air stream. The pressure drop that occurs when air flows through a Venturi nozzle is used to convey oil from the container to the drip cap. From here, the oil drips into the air duct directly behind the proportional valve, where it is atomised. The oil mist component is pro-

portional to the compressed air flow rate.

- Proportional lubricator with precision oil metering
- Reduces wear on drive units subject to high loading
- High flow rate
- Quick and easy oil top-up even during operation (under pressure)

The following oils are recommended for Festo components:  
Viscosity range to ISO 3448, ISO class VG 32  
32 mm<sup>2</sup>/s (= cSt) at 40°C

## On-off valves MS4/MS6-EM1, MS series

Technical data

### Function

- - Flow rate  
1,200 ... 8,700 l/min
- - Temperature range  
-10 ... +60 °C
- - Operating pressure  
0 ... 18 bar

- Manually operated on-off valve for pressurising and venting pneumatic installations
- The valve is activated by turning the rotary knob
- At connection 3 there is the facility to attach a silencer and/or to duct the exhaust air
- When the valve is closed, the rotary knob can be secured with a padlock
- Optional pressure gauge
- Optional pressure sensor with display

## Soft-start valves MS4/MS6-DL, MS series

Technical data

Function

-  - Flow rate  
1,000 ... 6,450 l/min
-  - Temperature range  
-10 ... +60 °C
-  - Operating pressure  
4 ... 18 bar

The duration of the pressure build-up is adjusted using the restrictor attached to the valve cap.

The output pressure  $p_2$  rises slowly in

accordance with the restrictor setting. The main seat opens when the switch-through pressure is reached.

- Pneumatically actuated soft-start valve for slowly pressurising and venting pneumatic installations (for use with on-off valves EM1 and EE)
- The drives advance slowly and reliably into the initial position
- Sudden and erratic movements are avoided
- Pressure switching approx. 50% of input pressure
- Adjustable switching time delay
- Optional pressure sensor with display

## Soft-start valves MS4/MS6-DE, MS series

Technical data

### Function

-  Flow rate  
1,000 ... 6,450 l/min
-  Temperature range  
-10 ... +60 °C
-  Operating pressure  
4 ... 18 bar

The duration of the pressure build-up is adjusted using the restrictor attached to the valve cap. The output pressure  $p_2$  rises slowly in accordance with the restrictor setting. Only the air flow from the restrictor is available when the solenoid valve is not actuated. The main seat is only opened by energising the solenoid valve.

When the solenoid valve is switched off, the main seat is closed and only the air flow from the flow control valve is available. The solenoid valve should remain switched on in order to vent a system as this increases the flow rate from 2 and 1 and reduces the exhaust time.

- Solenoid actuated soft-start valve for slowly pressurising and venting pneumatic installations
- The drives advance slowly and reliably into the initial position
- Sudden and erratic movements are avoided
- With solenoid coil without plug socket
- Switch-through pressure can be precisely controlled using a solenoid valve
- Adjustable switching time delay
- Three voltage ranges can be selected
- Pushing and detenting manual override (detenting is locked on delivery)
- Solenoid actuator can be repositioned by 180°
- Optional pressure sensor with display

## Soft start and exhaust valves MS6-SV, MS series

Technical data

## Function

- - Flow rate  
4300 l/min
- - Temperature range  
-10 ... +50 °C
- - Operating pressure  
3.5 ... 10 bar

The electropneumatic soft-start and exhaust valve is used to reduce pressure quickly and reliably and to build up pressure gradually in pneumatic systems and following devices in industry.

The device is a self-testing, redundant mechatronic system in accordance

with the requirements of DIN EN ISO 13849-1, for which the safety-related pneumatic protection objective and safe venting, even in the case of failures within a valve (e.g. caused by wear, contamination) are guaranteed. With the 2-channel design and its monitoring, the device

fulfils controller category 3 requirements. Thus, with correct installation and consideration of the specific application data, a performance level of max. "d" can be attained. Via the electrical connection (multi-pin plug socket NECA Sub-D, 9-pin), the device receives the secure enable

signals (EN1/EN2) from commercially available electronic or electromechanical protective switchgear, which monitor the protective equipment of the machine (e.g. emergency stop, light curtain, electrical door switch of the protective enclosure etc.).

- - Note

The device may only be used together with the multi-pin plug socket NECA approved for it. The multi-pin plug socket can be ordered via the modular product system (MP... → 3/2.16-35) or as an accessory (NECA → 3/2.31-20).

- - Note

To avoid back pressures, it is recommended that the device be operated together with the silencer UOS-1. The silencer can be ordered via the modular product system (SO → 3/2.16-35) or as an accessory (UOS-1 → 3/2.31-21).

- - Note

Only devices that do not impair the pneumatic protective measure – safe venting – may be placed after the MS6-SV.

- Conforms to DIN EN ISO 13849-1
- Max. achievable performance level "d"
- A switching time delay adjusted via a flow control valve for gradual pressure build-up
- Optional pressure sensor with display

### Function

- - Flow rate  
50 ... 400 l/min

- - Temperature range  
+2 ... +50 °C

- - Input pressure  
3 ... 12.5 bar

Pressure dew point reduction:  
20 K

- Optimum final dryer with excellent operational reliability
- Suitable for use as an individual unit or for integration in existing service unit combinations
- Flow rate-dependent dew point reduction

- Wear-free function requiring no external energy
- The composition of the compressed air remains almost unchanged due to the drying process
- 15% purge air flow rate
- Optional purge ring for ducting of purging air

- Typical areas of application:
- Drying, cleaning of precision parts
  - Measuring technology
  - Rinsing of precision glass scales
  - Painting systems
  - Paper and packaging machines

- - Note

Prefiltration of the compressed air using a micro filter MS-LFM-A, grade of filtration 0.01 µm (residual particles < 0.1 µm, residual oil content < 0.1 mg/m³) is vital for flawless functioning of the unit.

Technical data

Function

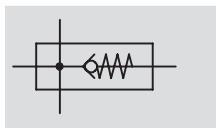

Standard

-  - Flow rate  
1,200 ... 13,000 l/min

-  - Temperature range  
-10 ... +60 °C

With integrated non-return function

-  - Operating pressure  
0 ... 20 bar

- Pneumatic manifold with 4 connections
- Can be used as an intermediate distributor for varying air qualities
- Attachment facility for auxiliary modules
- Outlet top and bottom
- An integrated non-return valve prevents the return flow e.g. of lubricated compressed air
- Optional pressure sensor with display

### General technical data

Type of mounting	Via accessories	
	In-line installation	
Assembly position	Any <sup>1)</sup>	
Pressure display	With pressure sensor for the output pressure display and with electric output	
	With pressure gauge for the output pressure display	

- 1) The branching module must be mounted vertically when combined with a pressure sensor as condensate must not collect in the pressure sensor.  
 Note: This product conforms with the ISO 1179-1 standard and the ISO 228-1 standard.

## Function<sup>1)</sup>

1) For example with 2 switch outputs PNP and 0 ... 10 V analogue

- - Flow rate  
200 ... 5,000 l/min
- - Temperature range  
0 ... +50 °C
- - Operating pressure  
0 ... 16 bar

- Switch output  
2x PNP or 2x NPN
- Analogue output  
0 ... 10 V or 4 ... 20 mA
- Suitable for flow and consumption measurement

- Switching points for measurement are freely programmable
- Freely selectable pulse output for consumption measurement

- - Note  
To comply with the specified accuracies, the MS6-SFE-F5-AGD-... must be supplied via a connection inside diameter of at least 10 mm and the MS6-SFE-F5-... must be supplied via a pneumatic connection of at least G1/2.

- - Note  
After a filter regulator MS6-LFR or pressure regulator MS6-LR, a branching module MS6-FRM must be fitted in front of a flow sensor MS6-SFE-F5-... in order that the specified accuracies can be maintained.

With this device, the filter and pressure regulator are combined into a single unit. The sintered filter with water separator removes contamination, pipe sinter, rust and condensate from the compressed air.

- Good control characteristics with low hysteresis and primary pressure compensation
- Good particle and condensate separation
- High flow rates
- Pilot actuated diaphragm regulator without intrinsic air consumption
- Three pressure regulation ranges:  
0.3 ... 7 bar, 0.5 ... 12 bar and  
0.5 ... 16 bar
- Pressure gauge connection for different fitting options

- Available with manual, fully automatic or fully automatic, electrically actuated condensate drain
- Setting values are secured by locking the rotary knob
- Rotary knob can be locked using accessories
- Choice of filter cartridges: 5 µm or 40 µm
- Filter cartridges ➔ 3/2.31-19

The pressure regulator maintains a constant working pressure (secondary side), regardless of the pressure variations in the system (primary side) and the air consumption.

Standard

Variant PO

- Good control characteristics with low hysteresis and primary pressure compensation
- High flow rate with minimal pressure drop
- Setting values are secured by locking the rotary knob

- Rotary knob can be locked using accessories
- With secondary venting
- Three pressure regulation ranges: 0.3 ... 7 bar, 0.5 ... 12 bar and 0.5 ... 16 bar
- Pressure gauge connection for different fitting options

The following oils are recommended for Festo components:  
Viscosity range to ISO 3448, ISO class VG 32  
32 mm<sup>2</sup>/s (= cSt) at 40°C

The proportional lubricator adds a precision adjustable quantity of oil to the compressed air stream. The pressure drop that occurs when air flows through a Venturi nozzle is used to convey oil from the container

to the drip cap. From here, the oil drips into the air duct directly behind the proportional valve, where it is atomised. The oil mist component is proportional to the compressed air flow rate.

- Proportional lubricator with precision oil metering
- Reduces wear on drive units subject to high loading
- High flow rate
- Quick and easy oil top-up even during operation (under pressure)

Technical data

### Function

- - Flow rate  
25,000 ... 42,000 l/min
- - Temperature range  
-10 ... +60 °C
- - Operating pressure  
2 ... 21 bar

The duration of the pressure build-up is adjusted using the restrictor attached to the valve cap. The output pressure p<sub>2</sub> rises slowly in

accordance with the restrictor setting. The main seat opens when the switch-through pressure is reached.

- Pneumatically actuated soft-start valve for slowly pressurising and venting pneumatic installations (for use with on-off valves EM and EE)
- The drives advance slowly and reliably into the initial position
- Sudden and erratic movements are avoided
- Pressure switching approx. 50% of input pressure
- Adjustable switching time delay

Technical data

### Function

- - Flow rate  
25,000 ... 42,000 l/min
- - Temperature range  
-10 ... +50 °C
- - Operating pressure  
3 ... 16 bar

The duration of the pressure build-up is adjusted using the restrictor attached to the valve cap. The output pressure  $p_2$  rises slowly in accordance with the restrictor setting. Only the air flow from the restrictor is available when the solenoid valve is not actuated. The main seat is only opened by energising the solenoid valve.

When the solenoid valve is switched off, the main seat is closed and only the air flow from the flow control valve is available. The solenoid valve should remain switched on in order to vent a system as this increases the flow rate from 2 and 1 and reduces the exhaust time.

- Solenoid actuated soft-start valve for slowly pressurising and venting pneumatic installations
- The drives advance slowly and reliably into the initial position
- Sudden and erratic movements are avoided

- With solenoid coil without plug socket
- Switch-through pressure can be exactly controlled using a solenoid valve
- Adjustable switching time delay
- Three voltage ranges can be selected
- Non-detenting manual override (except variant V24P)
