## Key features

### Solenoid valves VUVS

In-line valve VUVS-L as individual valve (piston spool valve)

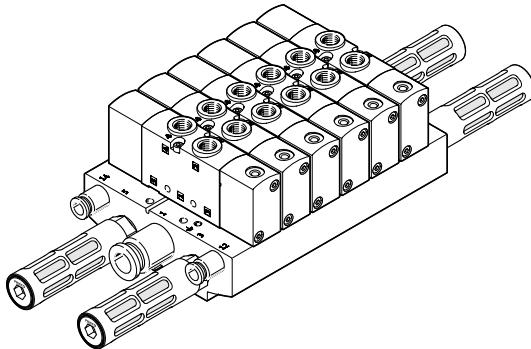

In-line valve VUVS-LT as individual valve (poppet seat valve)

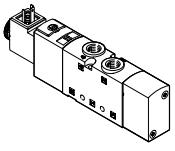

In-line valves are designed to be used without common pneumatic links. All pneumatic connections are on the valve and can be equipped with fittings/tubing. By using a special seal set, the in-line valves can also be

mounted on a manifold rail (pneumatic links) as semi in-line valves.

### Note

The operating voltage of valves VUVS-L and VUVS-LT can be varied by changing the solenoid coil on the armature guide tube.

Key features	• A maximum of 16 valve positions can be configured in the standard version	• Valve positions 2 ... 10 in increments of 1, valve positions 10 ... 16 in increments of 2	• Manifold block with a maximum of 10 valve positions	• Creation of pressure zones (maximum 9 pressure zones in the case of a valve manifold assembly with 16 valve positions)

## Design

### Valve replacement

Each valve is attached to the manifold block using two screws. The appropriate seal is mounted on the valve.

This means that the valves can be easily replaced.

### Extension

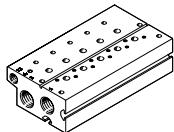

Valve positions covered with cover plates can be replaced with valves at a later date. The dimensions, mounting points and existing pneumatic

installation remain unchanged.

### Cover plate for vacant position

For covering vacant valve positions

### Supply plate

For additional air supply and exhaust via a valve position

### Separator for pressure zones

For creating pressure zones (maximum 9 pressure zones permitted)

### Note

A filter must be installed upstream of valves operated in vacuum mode. This prevents any foreign matter in the intake air getting into the valve (e.g. when operating a suction cup).

## Key features – Pneumatics

### Creating pressure zones and separating exhaust air

Compressed air is supplied and exhausted via the manifold block/common supply manifold and via supply plates.

The position of the supply plates and duct separations can be freely selected with the VTUS.

A pressure zone is created by isolating the internal ducts between the valve positions with an appropriate separator.

The separator can be used in the following ducts:

- Duct 1
- Duct 3
- Duct 5

- Use a separator if the exhaust air pressures are high
- Use at least one supply plate/supply for each pressure zone
- Pressure zone separation is not possible in ducts 12 and 14 (pilot air supply)

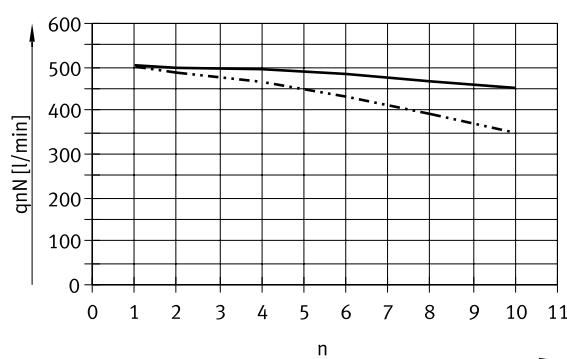

### Duct separation

	Description
	<p>The pressure zones can be freely configured with the VTUS. The following duct separations are possible:</p> <ul style="list-style-type: none"> <li>• Duct 1 closed</li> </ul>
	<ul style="list-style-type: none"> <li>• Duct 1/3/5 closed</li> </ul>
	<ul style="list-style-type: none"> <li>• Duct 3/5 closed</li> </ul>
	<p>The number of pressure zones with the VTUS is limited by the number of valve positions on the manifold block/common supply manifold. Note that each supply plate occupies one valve position. There must always be at least two valve positions between two separators. In the case of a maximum extension of 16 valve positions, a maximum of 9 pressure zones can be created.</p>

### Mounting – Valve manifold assembly VTUS

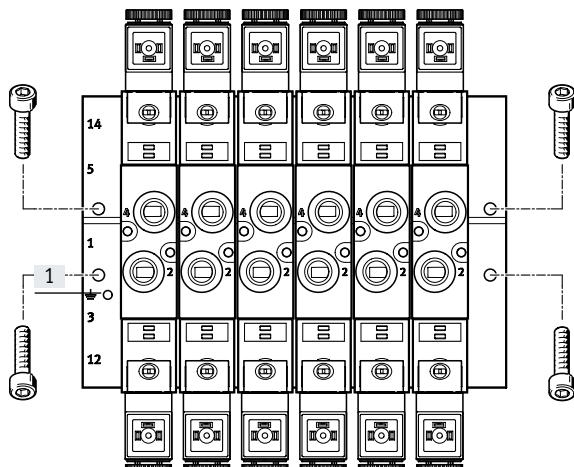

Sturdy manifold assembly thanks to:

- Four through-holes for wall mounting
- H-rail mounting

#### Note

Use the thread M4/M5 provided on the manifold block for earthing the valve manifold assembly.

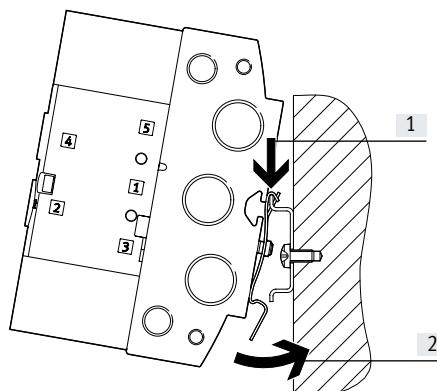

#### Wall mounting

Sturdy wall mounting of the manifold block using four through-holes.

[1] Earth terminal

#### H-rail mounting

#### The H-rail mounting

VAME-T-M... consists of two mounting clips. These are screwed to the manifold block on the left and right.

The valve manifold assembly VTUS is then lowered onto the H-rail from above (arrow A) and clipped into the H-rail at the bottom (arrow B).

#### Note

- Note the max. tightening torque of the screws for H-rail mounting.
- Only horizontal H-rail mounting is permissible
- Mounting only permissible on H-rail TH 35... to EN 60715
- Vibration/shock loads are not permissible with H-rail mounting.
- Further note on assembly
