Key features

FESTO

Performance characteristics	
Compactness	Motion control
<ul style="list-style-type: none"><li>Small dimensions</li><li>Full integration of all components for controller and power section, including RS232 and CANopen interface</li><li>Integrated brake chopper</li><li>Integrated EMC filters</li></ul>	<ul style="list-style-type: none"><li>Automatic actuation for a holding brake</li><li>Adheres to the current CE and EN standards without additional external measures (motor cable length of up to 15 m)</li><li>Can be operated as a torque, speed or position controller</li><li>Integrated positioning controller</li><li>Time-optimised (trapezoidal) or jerk-free (S-shaped) positioning</li><li>Absolute and relative movements</li><li>Point-to-point positioning with and without approximate positioning</li></ul>
Fieldbus interfaces	Input/output
Integrated:  CANopen	Optional:  PROFIBUS  DeviceNet
Integrated safety functions	Interpolating multi-axis movement
<ul style="list-style-type: none"><li>The motor controller CMMS-ST support "Safe Torque off (STO)" and "Safe Stop 1 (SS1)" functions with protection against unexpected startup in accordance with EN 61800-5-2</li></ul>	<ul style="list-style-type: none"><li>Protection against unexpected start-up</li><li>Two-channel disconnection of the output stage</li><li>Shorter response times in the event of an error</li></ul>
	<p>With a suitable controller, the CMMS-ST can perform path movements with interpolation via CANopen. The controller specifies setpoint position values in a fixed time pattern to this end. In between, the servo positioning controller independently interpolates the data values between two data points.</p>

PROFIBUS®, DeviceNet®, CANopen® is a registered trademark of its respective trademark holder in certain countries.

Key features

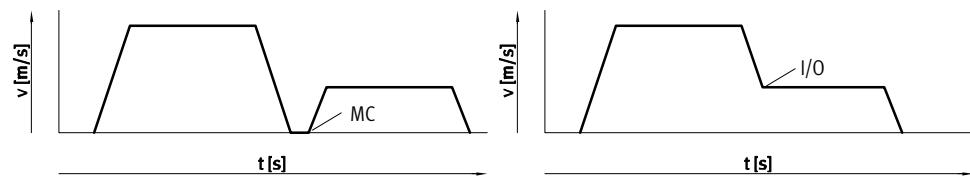

## Performance characteristics

Servo mode

- Encoder option (closed loop), in other words no step losses, following errors are corrected

## Travel program

- Linking of any number of position sets into a travel program
- Step criteria for the travel program possible via digital inputs, for example
  - MC – motion complete
  - I/O – digital inputs

## Library for EPLAN

ePLAN®  
electric

EPLAN macros for fast and reliable planning of electrical projects in combination with motor controllers,

motors and cables. This enables a high level of planning reliability, standardisation of documentation,

no need to create symbols, graphics and master data.

Key features

FESTO

## FCT software – Festo Configuration Tool

Software platform for electric drives from Festo

- All drives in a system can be managed and archived in a common project
- Project and data management for all supported device types
- Simple to use thanks to graphically-supported parameter entry
- Universal mode of operation for all drives
- Working offline at your desk or online at the machine

## FHPP – Festo Handling and Positioning Profile

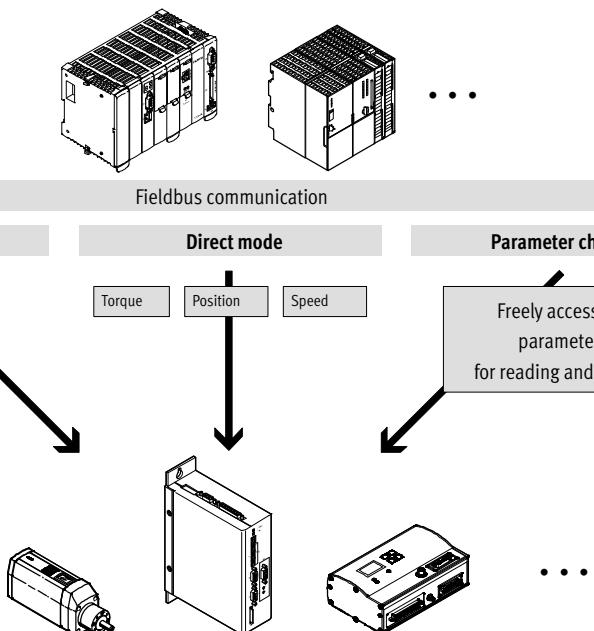

Optimised data profile

Festo has developed an optimised data profile, the “Festo Handling and Positioning Profile (FHPP)”, that is tailored to handling and positioning applications.

The FHPP data profile permits the actuation of Festo motor controllers, using a fieldbus interface, via standardised control and status bytes.

The following are defined, among others:

- Operating modes
- I/O data structure
- Parameter objects
- Sequence control

-  - Note

If a common power supply unit is used to supply the power section and the control section, the voltage tolerances for the supply to the control

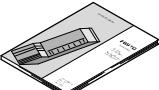

section cannot be maintained at high braking power. This can result in damage to the control section.

Always use separate power supply units to supply the power section and the control section.
