

## Guide units EAGF, for electric cylinders

**FESTO**

Festo core product range  
Covers 80% of your automation tasks

Worldwide:

Always in stock

Superb:

Festo quality at an attractive price

Easy:

Simplified procurement and warehousing

★ Generally ready for dispatch from the factory within 24 hours

In stock at 13 Service Centres worldwide

More than 2200 products

★ Generally ready for dispatch from the factory within 5 days

Assembled for you in 4 Service Centres worldwide

Up to  $6 \times 10^{12}$  variants per product family

Just look  
for the  
star!

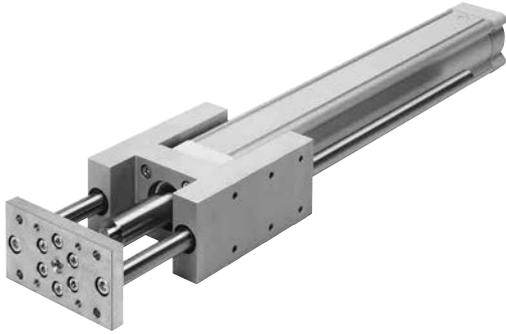

## Characteristics

### At a glance

The guide unit EAGF is used to protect electric cylinders against torsion when these are subjected to high torque loads. It offers a high level of guide precision for workpiece handling and other applications.

The interface enables quick and easy installation on many Festo drives/axes.

For electric cylinders ESBF → page 4

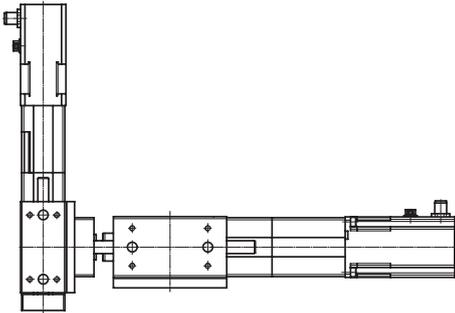

For electric cylinders EPCO → page 14

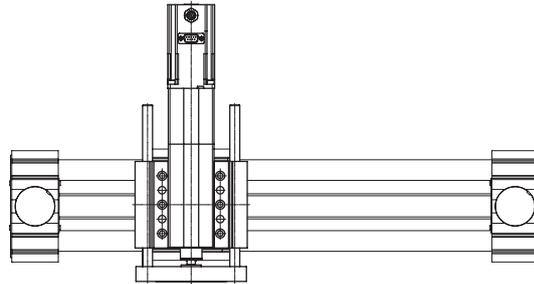

### Application examples

Pick & place with two guide units

Pick & place with guide unit and linear axis

## Data sheet

### Characteristic load values

The indicated forces and torques refer to the centre of the guide.

If the guide unit simultaneously subjected to several of the indicated forces and torques, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

$F_1/M_1$  = dynamic value  
 $F_2/M_2$  = maximum value

#### Distance X (for calculation example → page 6)

Size		32	40	50	63	80	100
Dimension X	[mm]	83	85	99	117	142	145

#### Max. permissible forces and torques

Size		32	40	50	63	80	100
------	--	----	----	----	----	----	-----

#### Static

$F_{y\max}/F_{z\max}$	[N]	1020	1260	1600	1600	3120	3120
$M_{x\max}$	[Nm]	38	55	83	95	231	268
$M_{y\max}/M_{z\max}$	[Nm]	46	65	89	115	259	267

#### Dynamic (for a service life of 5000 km)

$M_{x\max}$	[Nm]	28	44	65	75	170	198
$M_{y\max}/M_{z\max}$	[Nm]	34	52	70	90	191	197

## Data sheet

### Calculating the service life

The service life of the guide depends on the load. To provide a rough indication of the service life of the guide, the graph below plots the load comparison factor  $f_v$  against the service life ratio  $q$ .

These values are only theoretical. You must consult your local contact person at Festo for load comparison factors  $f_v$  greater than 1.5.

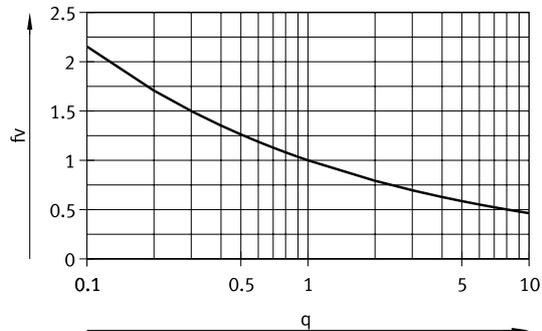

#### Load comparison factor $f_v$ as a function of service life ratio $q$

Example: The effect on the service life, deviating from the specified reference service life, can be determined using the service life ratio  $q$ :

Given: Reference service life = 5000 km  
 Required service life = 3000 km

$$q = \frac{3000 \text{ km}}{5000 \text{ km}} = 0,6$$

The graph gives a load comparison factor  $f_v$  of 1.2. This means that the permissible total load can be utilised up to 120%.

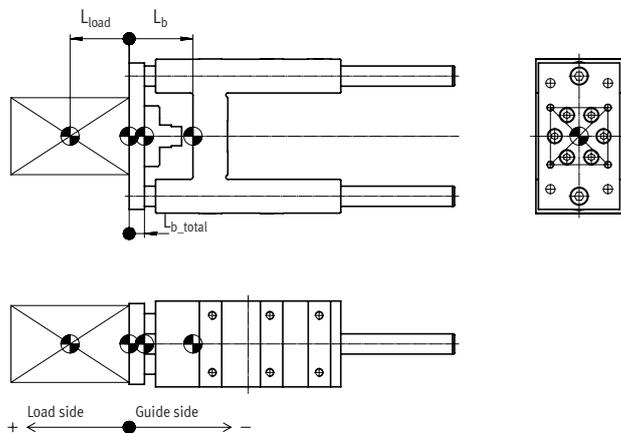

**Note**

Engineering software  
 PositioningDrives  
[www.festo.com](http://www.festo.com)

$f_v > 1.5$  are only theoretical comparison values.

### Calculation example

- $L_b$  = Centre of gravity of the moving mass of the guide unit
- $L_{load}$  = Centre of gravity of payload
- $L_{b\_total}$  = Centre of gravity of the total moving mass

Length measurements should be provided with plus/minus signs as shown in the figure:

- $L_{b\_total} > 0$  = Centre of gravity of the moving mass is on the payload side
- $L_{b\_total} < 0$  = Centre of gravity of the moving mass is on the guide side

**Given:**

- Guide unit: EAGF-V2-KF-32-200
- Stroke length:  $H = 200 \text{ mm}$
- Centre of gravity of payload:  $L_{load} = 15 \text{ mm}$
- Payload:  $m_{load} = 5 \text{ kg}$
- Acceleration:  $a_x = a_y = 2 \text{ m/s}^2$ ,  $a_z = 0 \text{ m/s}^2$

**To be calculated:**

- Loads  $F_{y\_dyn}/F_{z\_dyn}$  and  $M_{x\_dyn}/M_{y\_dyn}/M_{z\_dyn}$
- Proof of functionality with combined load
- Expected service life

## Data sheet

## Calculation example

Solution:

Moving mass:

$$m_{b\_total} = m_b + m_{load} \quad (m_b = m_{0b} + H \times m_{Hb})$$

From table → page 4

$$m_{0b} = 0.724 \text{ kg}$$

$$m_{Hb} = 0.018 \text{ kg/10 mm}$$

$$m_b = 0.724 \text{ kg} + 200 \text{ mm} \times 0.018 \text{ kg/10 mm} = 1.084 \text{ kg}$$

$$m_{b\_total} = 1.084 \text{ kg} + 5 \text{ kg} = 6.084 \text{ kg}$$

 $m_b$  = Moving mass of the guide unit $m_{0b}$  = Moving mass with 0 mm stroke $m_{Hb}$  = Additional mass per 10 mm stroke

H = Stroke length

## Centre of gravity of the moving mass

$$L_{b\_ges} = \frac{L_1 \cdot m_1 + L_b \cdot m_b}{m_{b\_ges}} \quad (L_b = L_{0b} + H \times L_{Hb})$$

From table → page 4

$$L_{0b} = 30 \text{ mm}$$

$$L_{Hb} = 4.1 \text{ mm/10 mm}$$

$$L_b = 30 \text{ mm} + 200 \text{ mm} \times 4.1 \text{ mm/10 mm} = 112 \text{ mm}$$

$$L_{b\_ges} = \frac{(+15 \text{ mm}) \cdot 5 \text{ kg} + (-112 \text{ mm}) \cdot 1.084 \text{ kg}}{6.084 \text{ kg}} = -8 \text{ mm}$$

 $L_b$  = Centre of gravity of the moving mass of the guide unit $m_b$  = Moving mass of the guide unit $L_1$  = Centre of gravity of payload $m_1$  = Payload $L_{0b}$  = Centre of gravity of the moving mass with 0 mm stroke $L_{Hb}$  = Additional centre of gravity of the moving mass per 10 mm stroke

Length measurements should be provided with plus/minus signs as shown in the figure:

 $L_{b\_total} > 0$  = Centre of gravity of the moving mass is on the payload side $L_{b\_total} < 0$  = Centre of gravity of the moving mass is on the guide sideLoads  $F_{y\_dyn}/F_{z\_dyn}$  and  $M_{x\_dyn}/M_{y\_dyn}/M_{z\_dyn}$ 

$$F_{y\_dyn} = m_{b\_total} \times a_y = 6.084 \text{ kg} \times 2 \text{ m/s}^2 = 12 \text{ N}$$

$$F_{z\_dyn} = m_{b\_total} \times (g + a_z) = 6.084 \text{ kg} \times (9.81 \text{ m/s}^2 + 0 \text{ m/s}^2) = 60 \text{ N}$$

From table → page 5

Dimension X = 83 mm

$$M_{y\_dyn} = F_{z\_dyn} \times (\text{dimension X} + \text{stroke} + L_{b\_total}) = 60 \text{ N} \times (83 \text{ mm} + 200 \text{ mm} + (-8 \text{ mm})) = 16 \text{ Nm}$$

$$M_{z\_dyn} = F_{y\_dyn} \times (\text{dimension X} + \text{stroke} + L_{b\_total}) = 12 \text{ N} \times (83 \text{ mm} + 200 \text{ mm} + (-8 \text{ mm})) = 3 \text{ Nm}$$

## Proof of functionality with combined load

Max. values from table → page 5

$$F_{y\_max} = 750 \text{ N}$$

$$F_{z\_max} = 750 \text{ N}$$

$$M_{x\_max} = 28 \text{ Nm}$$

$$M_{y\_max} = 34 \text{ Nm}$$

$$M_{z\_max} = 34 \text{ Nm}$$

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

$$f_v = \frac{12 \text{ N}}{750 \text{ N}} + \frac{60 \text{ N}}{750 \text{ N}} + \frac{0 \text{ Nm}}{28 \text{ Nm}} + \frac{16 \text{ Nm}}{34 \text{ Nm}} + \frac{3 \text{ Nm}}{34 \text{ Nm}} = 0,7 \leq 1$$

 $F_1/M_1$  = dynamic value $F_2/M_2$  = maximum value

## Expected service life

$$L = \frac{L_{ref}}{f_v^3} = \frac{5000 \text{ km}}{0,7^3} = 14000 \text{ km}$$

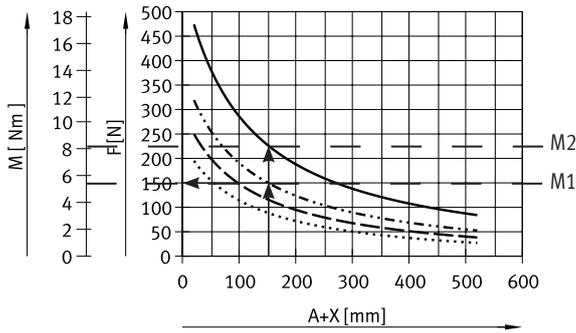

Data sheet

Max. payload F and torque M as a function of cantilever load A

A = Cantilever load  
 X = Distance to centre of gravity of the payload  
 S = Centre of gravity of the payload  
 M = Torque

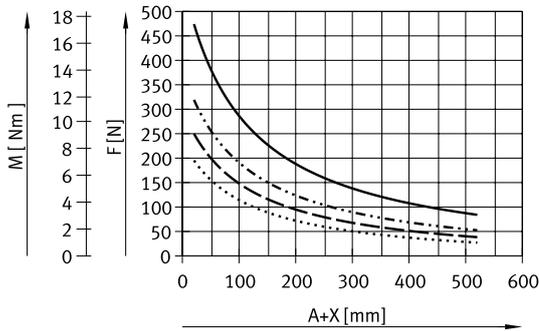

Explanation of how to read graphs in the case of a combined load

- Determine cantilever load (150 mm)
- Enter lateral force (150 N)
- Enter distance from curve
- Permitted torque is the difference between M2 and M1

## Data sheet

### Deflection $f_{tare}$ (due to tare weight) as a function of cantilever load A

- EAGF-V2-KF-32
- · - · - · EAGF-V2-KF-40
- - - - - EAGF-V2-KF-50
- · · · · EAGF-V2-KF-63
- · - · - · EAGF-V2-KF-80
- - - - - EAGF-V2-KF-100

### Deflection $f_{standard}$ (due to lateral force) as a function of cantilever load A

- EAGF-V2-KF-32
- · - · - · EAGF-V2-KF-40
- - - - - EAGF-V2-KF-50/  
EAGF-V2-KF-63
- · - · - · EAGF-V2-KF-80/  
EAGF-V2-KF-100

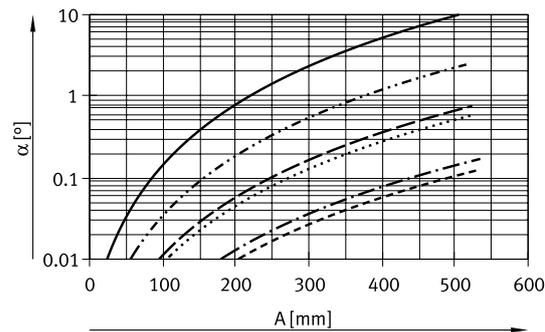

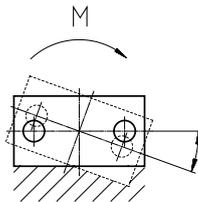

The maximum permissible lateral force must not be exceeded.

$$f_1 = \frac{F_1}{F_2} \cdot f_2$$

$$F_2 = 10 \text{ N}$$

- A = Cantilever load of guide rod
- $f_1$  = Deflection due to lateral force
- $F_1$  = Lateral force
- $F_2$  = Standardised lateral force
- $f_2$  = Deflection due to standardised lateral force (value from graph)

### Incline $\alpha$ (due to torque) as a function of cantilever load A

- EAGF-V2-KF-32
- · - · - · EAGF-V2-KF-40
- - - - - EAGF-V2-KF-50
- · · · · EAGF-V2-KF-63
- · - · - · EAGF-V2-KF-80
- - - - - EAGF-V2-KF-100

$$\alpha_1 = \frac{M_1}{M_2} \cdot \alpha_2$$

$$M_2 = 2 \text{ Nm}$$

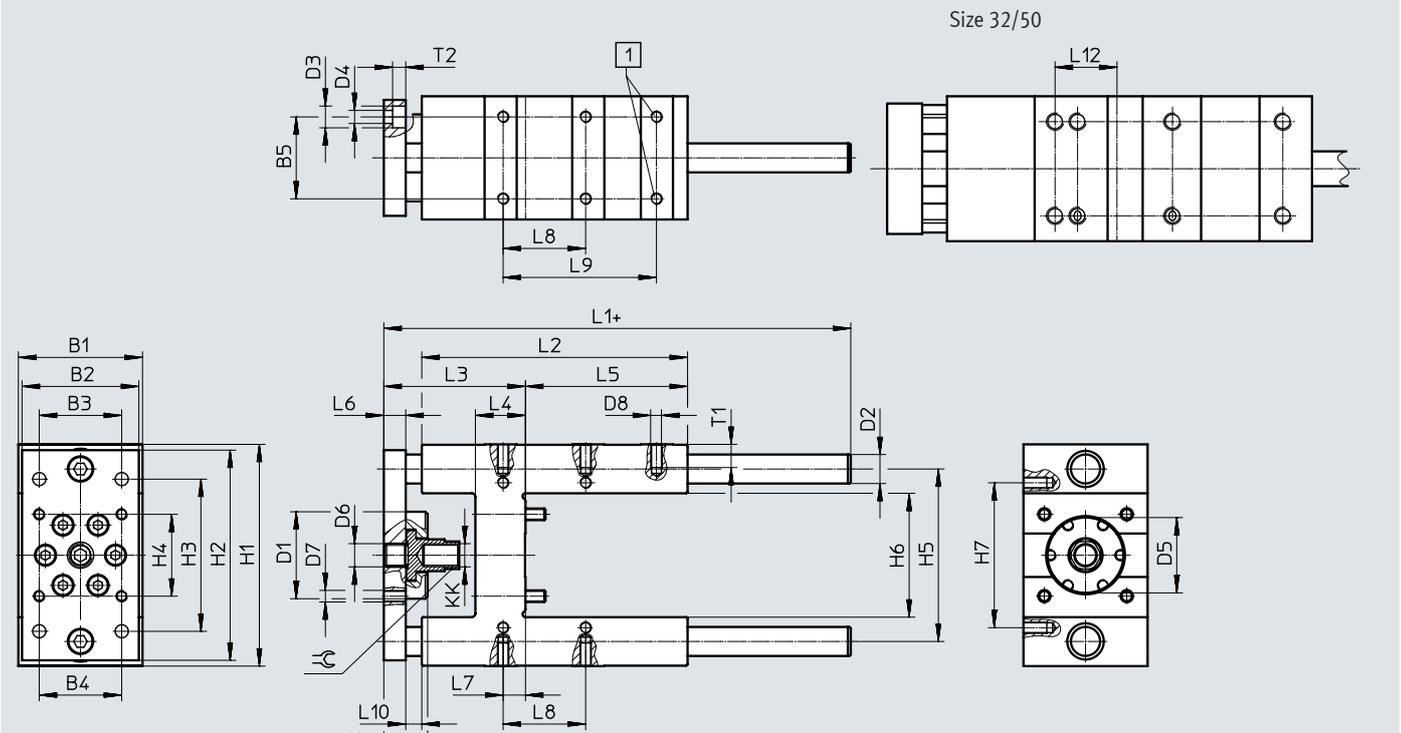

(valid for  $\alpha \leq 10^\circ$ )

- A = Cantilever load of guide rod
- $\alpha_1$  = Incline due to torque
- $M_1$  = Torque
- $M_2$  = Standardised torque
- $\alpha_2$  = Deflection due to standardised torque

## Data sheet

### Materials

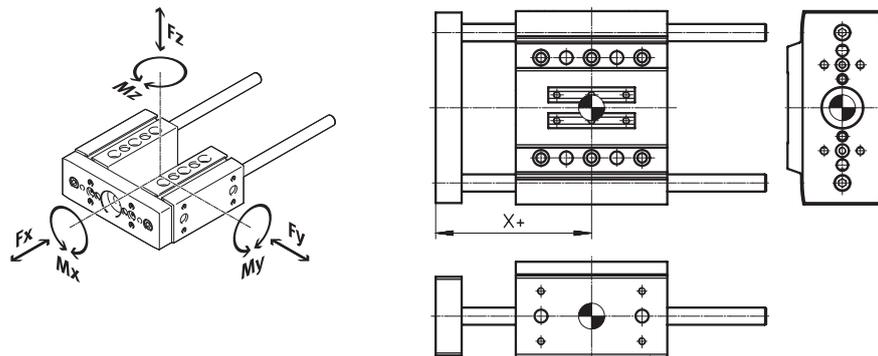

#### Sectional view

Guide unit		
[1]	Yoke plate	Anodised wrought aluminium alloy
[2]	Housing	Anodised wrought aluminium alloy
[3]	Bearing	Steel
[4]	Guide rod	Hard-chromium plated tempered steel
-	Note on materials	RoHS-compliant Free of copper and PTFE

### Characteristic load values

The indicated forces and torques refer to the centre of the guide.

If the guide unit simultaneously subjected to several of the indicated forces and torques, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

$F_1/M_1$  = dynamic value

$F_2/M_2$  = maximum value

$M_{Ymax}/M_{Zmax}$ [Nm]	4	10	15

## Data sheet

### Calculating the service life

The service life of the guide depends on the load. To provide a rough indication of the service life of the guide, the graph below plots the load comparison factor  $f_v$  against the service life ratio  $q$ .

These values are only theoretical. You must consult your local contact person at Festo for load comparison factors  $f_v$  greater than 1.5.

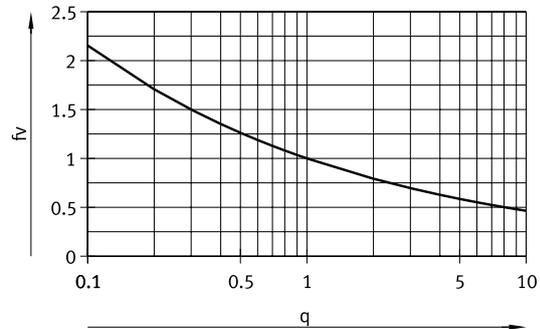

#### Load comparison factor $f_v$ as a function of service life ratio $q$

Example: The effect on the service life, deviating from the specified reference service life, can be determined using the service life ratio  $q$ :

Given: Reference service life = 5000 km  
Required service life = 3000 km

$$q = \frac{3000 \text{ km}}{5000 \text{ km}} = 0,6$$

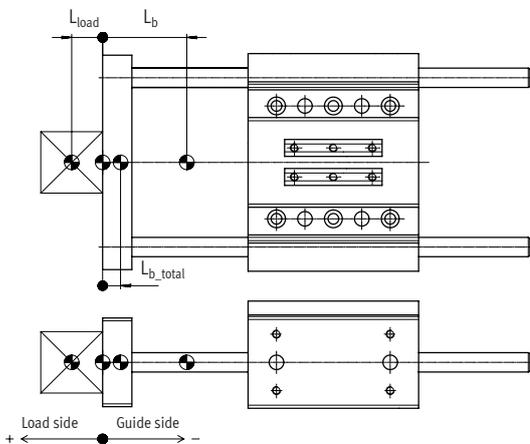

The graph gives a load comparison factor  $f_v$  of 1.2. This means that the permissible total load can be utilised up to 120%.

 **Note**  
Engineering software  
PositioningDrives  
www.festo.com

$f_v > 1.5$  are only theoretical comparison values.

### Calculation example

$L_b$  = Centre of gravity of the moving mass of the guide unit  
 $L_{load}$  = Centre of gravity of payload  
 $L_{b\_total}$  = Centre of gravity of the total moving mass

Length measurements should be provided with plus/minus signs as shown in the figure:

$L_{b\_total} > 0$  = Centre of gravity of the moving mass is on the payload side  
 $L_{b\_total} < 0$  = Centre of gravity of the moving mass is on the guide side

#### Given:

- Guide unit: EAGF-P1-KF-25-200
- Stroke length:  $H = 200 \text{ mm}$
- Centre of gravity of payload:  $L_{load} = 15 \text{ mm}$
- Payload:  $m_{load} = 2 \text{ kg}$
- Acceleration:  $a_x = a_y = 2 \text{ m/s}^2$ ,  $a_z = 0 \text{ m/s}^2$

#### To be calculated:

- Loads  $F_{y\_dyn}/F_{z\_dyn}$  and  $M_{x\_dyn}/M_{y\_dyn}/M_{z\_dyn}$
- Proof of functionality with combined load
- Expected service life

## Data sheet

### Calculation example

Solution:

Moving mass:

$$m_{b\_total} = m_b + m_{load} \quad (m_b = m_{0b} + H \times m_{Hb})$$

From table → page 14

$$m_{0b} = 0.3 \text{ kg}$$

$$m_{Hb} = 0.012 \text{ kg/10 mm}$$

$$m_b = 0.3 \text{ kg} + 200 \text{ mm} \times 0.012 \text{ kg/10 mm} = 0.54 \text{ kg}$$

$$m_{b\_total} = 0.54 \text{ kg} + 2 \text{ kg} = 2.54 \text{ kg}$$

$m_b$  = Moving mass of the guide unit

$m_{0b}$  = Moving mass with 0 mm stroke

$m_{Hb}$  = Additional mass per 10 mm stroke

$H$  = Stroke length

### Centre of gravity of the moving mass

$$L_{b\_ges} = \frac{L_1 \cdot m_1 + L_b \cdot m_b}{m_{b\_ges}} \quad (L_b = L_{0b} + H \times L_{Hb})$$

From table → page 14

$$L_{0b} = 30 \text{ mm}$$

$$L_{Hb} = 4.5 \text{ mm/10 mm}$$

$$L_b = 30 \text{ mm} + 200 \text{ mm} \times 4.5 \text{ mm/10 mm} = 120 \text{ mm}$$

$$L_{b\_ges} = \frac{(+15 \text{ mm}) \cdot 2 \text{ kg} + (-120 \text{ mm}) \cdot 0.54 \text{ kg}}{2.54 \text{ kg}} = -14 \text{ mm}$$

$L_b$  = Centre of gravity of the moving mass of the guide unit

$m_b$  = Moving mass of the guide unit

$L_1$  = Centre of gravity of payload

$m_1$  = Payload

$L_{0b}$  = Centre of gravity of the moving mass with 0 mm stroke

$L_{Hb}$  = Additional centre of gravity of the moving mass per 10 mm stroke

Length measurements should be provided with plus/minus signs as shown in the figure:

$L_{b\_total} > 0$  = Centre of gravity of the moving mass is on the payload side

$L_{b\_total} < 0$  = Centre of gravity of the moving mass is on the guide side

### Loads $F_{y\_dyn}/F_{z\_dyn}$ and $M_{x\_dyn}/M_{y\_dyn}/M_{z\_dyn}$

$$F_{y\_dyn} = m_{b\_total} \times a_y = 2.54 \text{ kg} \times 2 \text{ m/s}^2 = 5 \text{ N}$$

$$F_{z\_dyn} = m_{b\_total} \times (g + a_z) = 2.54 \text{ kg} \times (9.81 \text{ m/s}^2 + 0 \text{ m/s}^2) = 25 \text{ N}$$

From table → page 15

Dimension X = 59 mm

$$M_{y\_dyn} = F_{z\_dyn} \times (\text{dimension X} + \text{stroke} + L_{b\_total}) = 25 \text{ N} \times (59 \text{ mm} + 200 \text{ mm} + (-14 \text{ mm})) = 6.1 \text{ Nm}$$

$$M_{z\_dyn} = F_{y\_dyn} \times (\text{dimension X} + \text{stroke} + L_{b\_total}) = 5 \text{ N} \times (59 \text{ mm} + 200 \text{ mm} + (-14 \text{ mm})) = 1.2 \text{ Nm}$$

### Proof of functionality with combined load

Max. values from table → page 15

$$F_{y\_max} = 320 \text{ N}$$

$$F_{z\_max} = 320 \text{ N}$$

$$M_{x\_max} = 15 \text{ Nm}$$

$$M_{y\_max} = 10 \text{ Nm}$$

$$M_{z\_max} = 10 \text{ Nm}$$

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

$$f_v = \frac{5 \text{ N}}{320 \text{ N}} + \frac{25 \text{ N}}{320 \text{ N}} + \frac{0 \text{ Nm}}{15 \text{ Nm}} + \frac{6.1 \text{ Nm}}{10 \text{ Nm}} + \frac{1.2 \text{ Nm}}{10 \text{ Nm}} = 0.8 \leq 1$$

$F_1/M_1$  = dynamic value

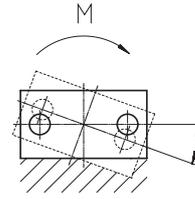

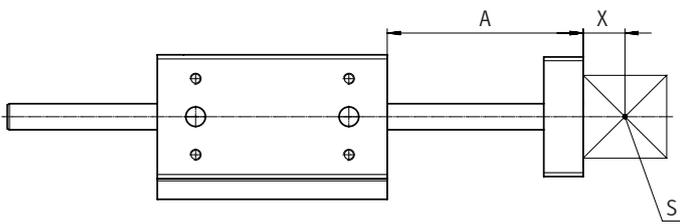

$F_2/M_2$  = maximum value

### Expected service life

$$L = \frac{L_{ref}}{f_v^3} = \frac{5000 \text{ km}}{0.8^3} = 9000 \text{ km}$$

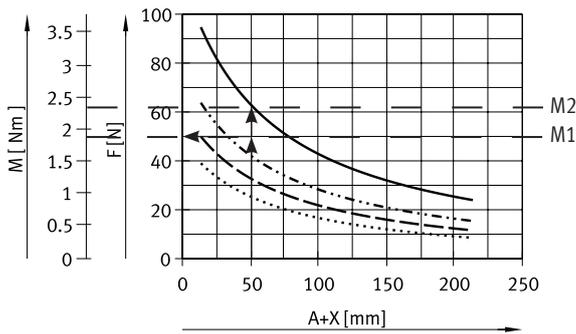

## Data sheet

### Max. payload F and torque M as a function of cantilever load A

- A = Cantilever load
- X = Distance to centre of gravity of the payload
- S = Centre of gravity of the payload
- M = Torque

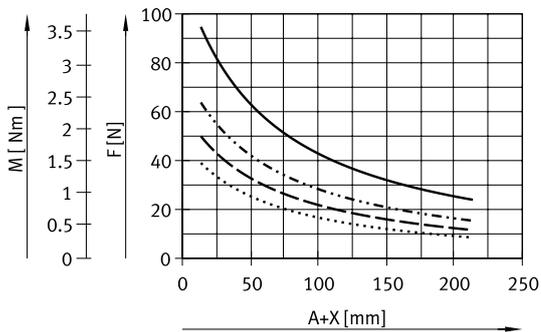

### Explanation of how to read graphs in the case of a combined load

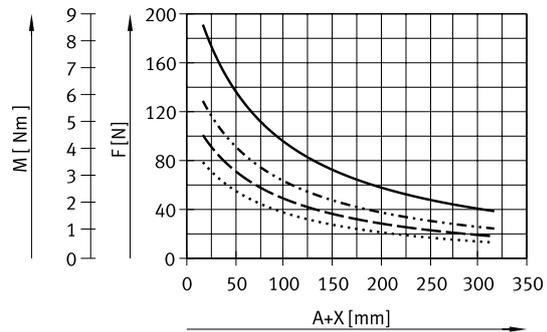

- Determine cantilever load (50 mm)
- Enter lateral force (50 N)
- Enter distance from curve
- Permitted torque is the difference between M2 and M1

- Running performance of 500 km
- · - · - Running performance of 2500 km
- - - Running performance of 5000 km
- Running performance of 10000 km

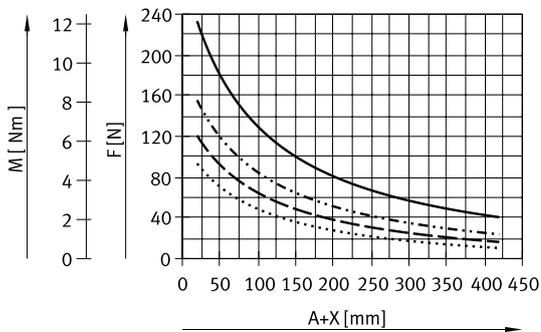

### Size: 16

### Size: 25

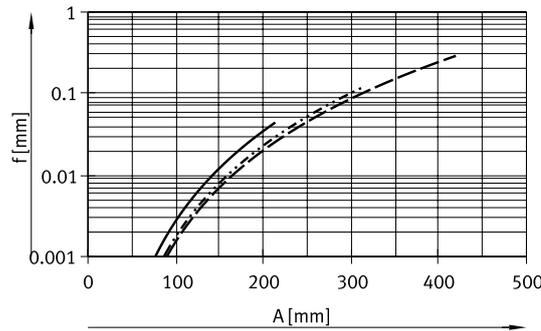

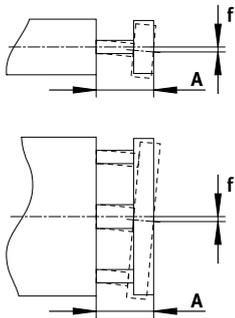

### Size: 40

- Running performance of 500 km
- · - · - Running performance of 2500 km
- - - Running performance of 5000 km
- Running performance of 10000 km

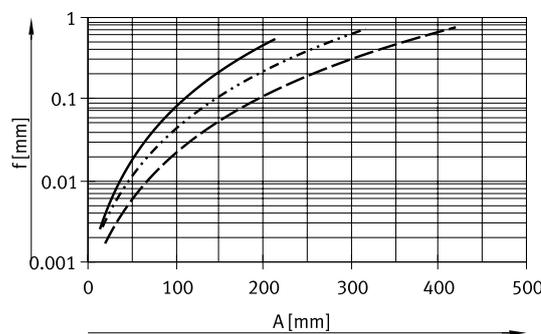

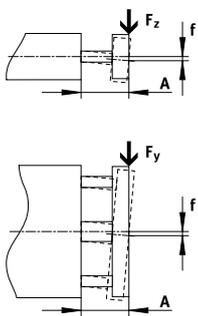

## Data sheet

### Deflection $f_{tare}$ (due to tare weight) as a function of cantilever load A

— EAGF-P1-KF-16  
 ..... EAGF-P1-KF-25  
 - - - EAGF-P1-KF-40

### Deflection $f_{standard}$ (due to lateral force) as a function of cantilever load A

— EAGF-P1-KF-16  
 ..... EAGF-P1-KF-25  
 - - - EAGF-P1-KF-40

The maximum permissible lateral force must not be exceeded.

$$f_1 = \frac{F_1}{F_2} \cdot f_2$$

$$F_2 = 10 \text{ N}$$

A = Cantilever load of guide rod

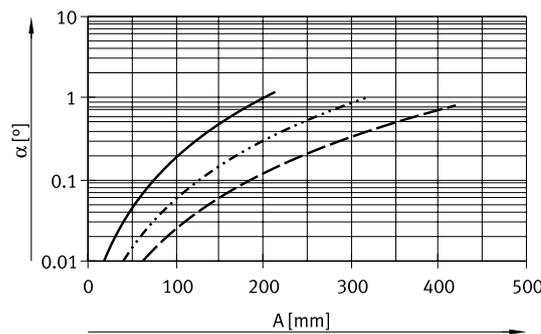

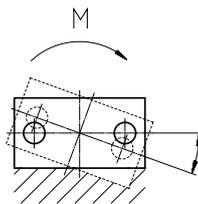

$f_1$  = Deflection due to lateral force

$F_1$  = Lateral force

$F_2$  = Standardised lateral force

$f_2$  = Deflection due to standardised lateral force (value from graph)

### Incline $\alpha$ (due to torque) as a function of cantilever load A

— EAGF-P1-KF-16  
 ..... EAGF-P1-KF-25  
 - - - EAGF-P1-KF-40

$$\alpha_1 = \frac{M_1}{M_2} \cdot \alpha_2$$

$$M_2 = 2 \text{ Nm}$$

(valid for  $\alpha \leq 10^\circ$ )

A = Cantilever load of guide rod

$\alpha_1$  = Incline due to torque

$M_1$  = Torque

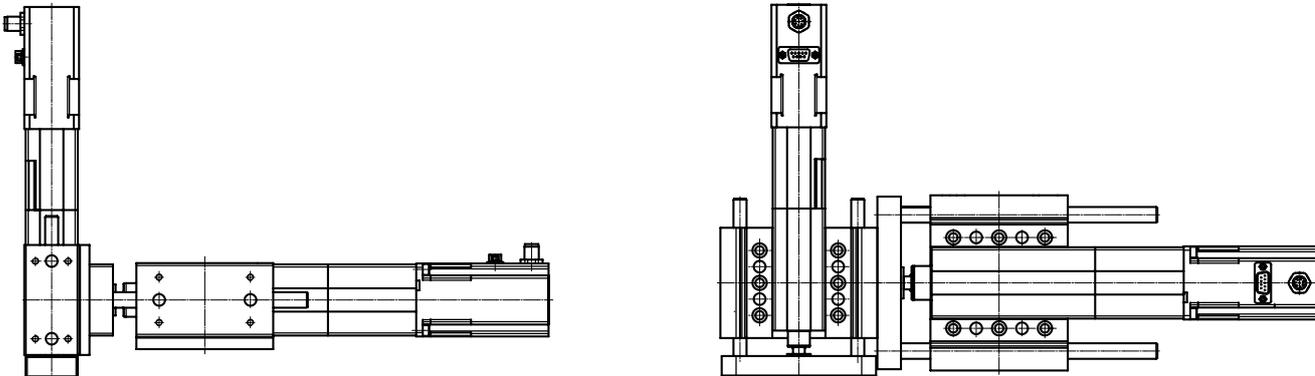

$M_2$  = Standardised torque

$\alpha_2$  = Deflection due to standardised torque
