

Toothed belt axes ELGG

FESTO

Characteristics

At a glance

- Toothed belt axis with two opposing slides
- Optimum price/performance ratio
- Ready-to-install unit for quick and easy design
- High reliability thanks to tested service life of 2500 km per slide
- Motor mounting possible on 4 sides with identical mounting accessories
- Complete kit for a simple and space-saving solution for end-position sensing
- Plain-bearing guide
 - For small loads
 - Restricted operating behaviour with torque load
 - Guide not backlash-free
- Recirculating ball bearing guide
 - For medium loads
 - Very good operating behaviour with torque load
 - Backlash-free guide (preloaded guide elements)

Opposing movement, controlled via a motor

Optionally with central support to increase the forces and torques per slide.

Application examples

- Suitable for sorting, separating and spreading
- For opening doors
- For gripping tasks with small loads
- Positioning and handling with low process forces
- Centring and aligning

Characteristic values of the axes

The specifications shown in the table are maximum values.

The precise values for each of the variants can be found in the relevant data sheet.

Characteristic load values

The indicated forces and torques refer to the centre of the guide. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect.

These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

Without central support

With central support

If the axis is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Without central support

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1} + F_{y2}|}{F_{y3}} + \frac{|F_{z1} + F_{z2}|}{F_{z3}} + \frac{|M_{x1} + M_{x2}|}{M_{x3}} + \frac{|M_{y1} + M_{y2}|}{M_{y3}} + \frac{|M_{z1} + M_{z2}|}{M_{z3}} \leq 1$$

F_1/M_1 dynamic values
 F_2/M_2 dynamic values
 F_3/M_3 maximum values

With central support

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y3}} + \frac{|F_{z1}|}{F_{z3}} + \frac{|M_{x1}|}{M_{x3}} + \frac{|M_{y1}|}{M_{y3}} + \frac{|M_{z1}|}{M_{z3}} \leq 1 \quad f_v = \frac{|F_{y2}|}{F_{y3}} + \frac{|F_{z2}|}{F_{z3}} + \frac{|M_{x2}|}{M_{x3}} + \frac{|M_{y2}|}{M_{y3}} + \frac{|M_{z2}|}{M_{z3}} \leq 1$$

Data sheet

Service life

The service life of the guide depends on the load. To provide a rough indication of the service life of the guide, the graph below plots the load comparison factor f_v against the service life.

These values are only theoretical. You must consult your local contact person at Festo for load comparison factors f_v greater than 1.5.

Load comparison factor f_v as a function of service life

Example:

A user wants to move an X kg load. Using the formula → page 10 gives a value of 1.5 for the load comparison factor f_v . According to the graph, the guide would have a service life of approx. 750 km. Reducing the acceleration reduces the M_z and M_y values. A load comparison factor of 1 now gives a service life of 2500 km.

Note

For the plain-bearing guide (GF) it is recommended to reduce the acceleration to minimise overshings and increase positioning accuracy.

Stroke reserve

L18 = Nominal stroke
L19 = Stroke reserve

- The stroke reserve is a safety distance from the mechanical end position and is not used in normal operation
- The sum of the nominal stroke and 2x stroke reserve must not exceed the maximum permissible working stroke per slide
- The stroke reserve length can be freely selected
- The stroke reserve is defined via the "stroke reserve" characteristic in the modular product system.

Example:

Type ELGG-TB-45-500-20H-...
Nominal stroke = 500 mm
2x stroke reserve = 40 mm
Working stroke per slide = 540 mm
(540 mm = 500 mm + 2x 20 mm)

Working stroke reduction

With standard slide or long slide L with additional slide ZB

L7 = Slide length
L16 = Distance between the two slides
L17 = Additional slide length

- For a toothed belt axis with additional slide, the working stroke is reduced by the length of the additional slide and the distance between the two slides
- If the variant long slide L is ordered, the additional slide is not extended

Example:

Type ELGG-TB-35-500-...-ZR
Working stroke = 500 mm
L16 = 10 mm
L7 = 146 mm
L17 = 76 mm

Working stroke per slide with additional slide = 414 mm
(500 mm – 10 mm – 76 mm)

Recommended deflection limits

Adherence to a maximum deflection of 0.5 mm is recommended so as not to impair the functionality of the axes. Greater deformation can result in increased friction, greater wear and reduced service life.
