

Stopper cylinders DFST

FESTO

Stopper cylinders DFST

Key features

FESTO

At a glance

- Gentle stopping without impact vibration or noise
- Single-acting or double-acting
- Powerful shock absorber for high energy absorption
- Wide range of applications thanks to adjustable shock absorber
- Supply ports at side or underneath
- Adjustable active direction thanks to rotatable toggle lever arrangement (90° , 180° , 270°)
- Position sensing via inductive proximity sensor SIEN on the toggle lever or via proximity sensor for T-slot SME-/SMT-8 on the piston
- Sturdy design for long service life
- Stable guide rod
- Seal for protection against dirt and moisture

The technology in detail

Cushioning adjustment

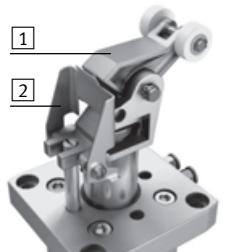

- Adaptable shock absorber depending on the load on the conveyed good
- Easy adjustment via knurled adjusting wheel [1]
- Shock absorber can be replaced in the fitted position

Optional: toggle lever lock

- For locking the toggle lever [1]
- The toggle lever lock [2] can be ordered as a variant of the stopper cylinder or as an accessory
- Simple design
- Reliable function

Piston Ø 50:

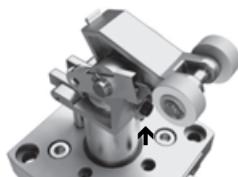

Piston Ø 63, 80:

Toggle lever deactivator

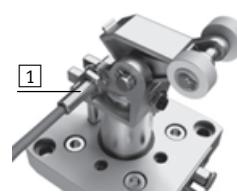

- For deactivation of the stop function
- The toggle lever deactivator can be ordered as an accessory
- Simple design

Position sensing

- Sensing of the toggle lever position (conveyed good in stop position) via inductive proximity sensor SIEN-M8 [1]
- Sensing of the piston position (cylinder retracted or advanced) via proximity sensor SME-/SMT-8 in the slot [2]

Sensing of the toggle lever position

Sensing of the piston position

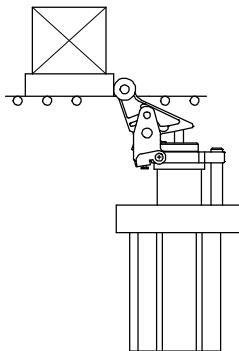

Stopper cylinders DFST

FESTO

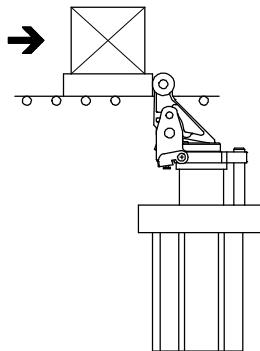

Key features

Functional sequence

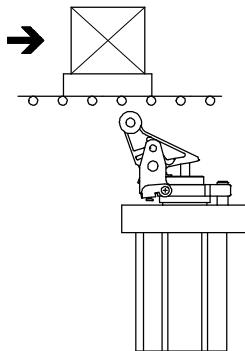

Step 1

Step 2

Step 3

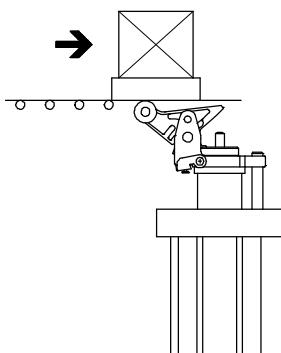

1. Gentle stopping of heavy masses via a hydraulic shock absorber in the piston rod.

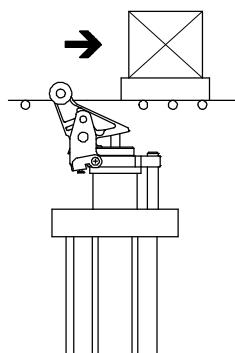

2. The toggle lever (optional) is locked into the retracted end position so that the conveyed good cannot be pushed back by the shock absorber.

3. The conveyed good is released by means of compressed air, and the toggle lever is released simultaneously.

Step 4

Step 5

4. The piston is advanced by means of spring force or compressed air. The toggle lever tips back which prevents the conveyed good from being pushed up.

5. The toggle lever is raised by means of spring force and stops the next conveyed good.

General technical data

Piston Ø	50	63	80
Pneumatic connection	G1/8		
Stroke [mm]	30		40
Constructional design	Piston rod with toggle lever		
Mode of operation	Double-acting Single-acting, pulling		
Protection against torsion/guide	Guide rod		
Type of mounting	Via through-holes		
Cushioning (of piston movement)	Flexible cushioning rings/pads at both ends		
Position sensing	Via proximity sensor		
Mounting position	Vertical		
Product weight [g]	1800	3500	6850

Operating and environmental conditions

Operating medium	Compressed air in accordance with ISO 8573-1:2010 [7:-:-]
Operating pressure ¹⁾ [bar]	2 ... 10
Ambient temperature [°C]	5 ... 60
Corrosion resistance class CRC ²⁾	1

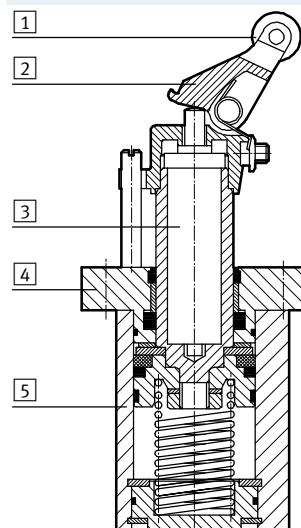

1) Min. operating pressure for piston Ø 50 with toggle lever lock is 3 bar

2) Corrosion resistance class 1 as per Festo standard 940 070

Components requiring low corrosion resistance. Transport and storage protection. Parts that do not have primarily decorative surface requirements, e.g. in internal areas that are not visible or behind covers.

Materials

Sectional view

Stopper cylinder

Piston Ø	50	63, 80
1 Rollers	Polyacetate	
2 Attachments	Nickel-plated cast steel

Technical data

Braking distance

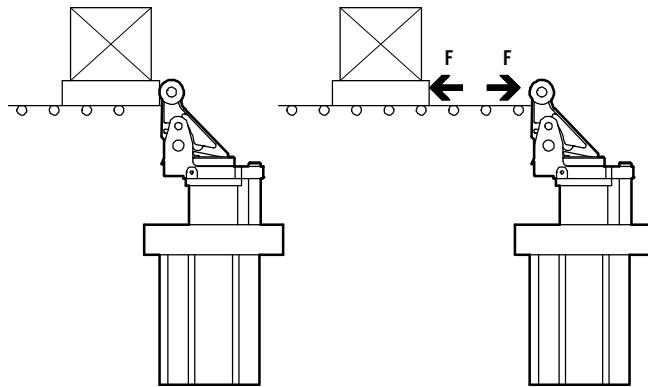

The braking distance refers to the distance from when contact is made with the toggle lever to the end stop.

Piston Ø	50	63	80
Braking distance [mm]	14.75	14.75	20

Resetting force F_R of the toggle lever against the delivery direction

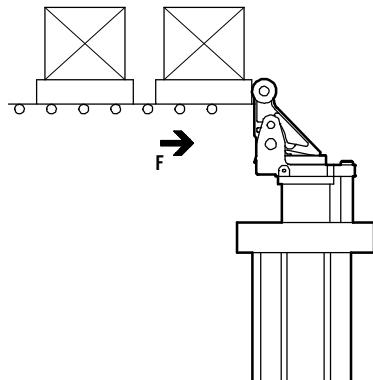

The resetting force refers to the minimum force that must be applied to press the toggle lever into the end position.

Piston Ø	50	63	80
Resetting force at the toggle lever [N]	11	23	36

Permissible impact force F_{impact} on the rollers of the toggle lever when the piston rod is advanced and the toggle lever is pushed into its end position

The permissible impact force refers to the momentary force that may act on the toggle lever when it is already pushed into its end position without damaging the rod bearing or the toggle lever mechanism.

Piston Ø	50	63	80
Impact force [N]	3000	5000	6000

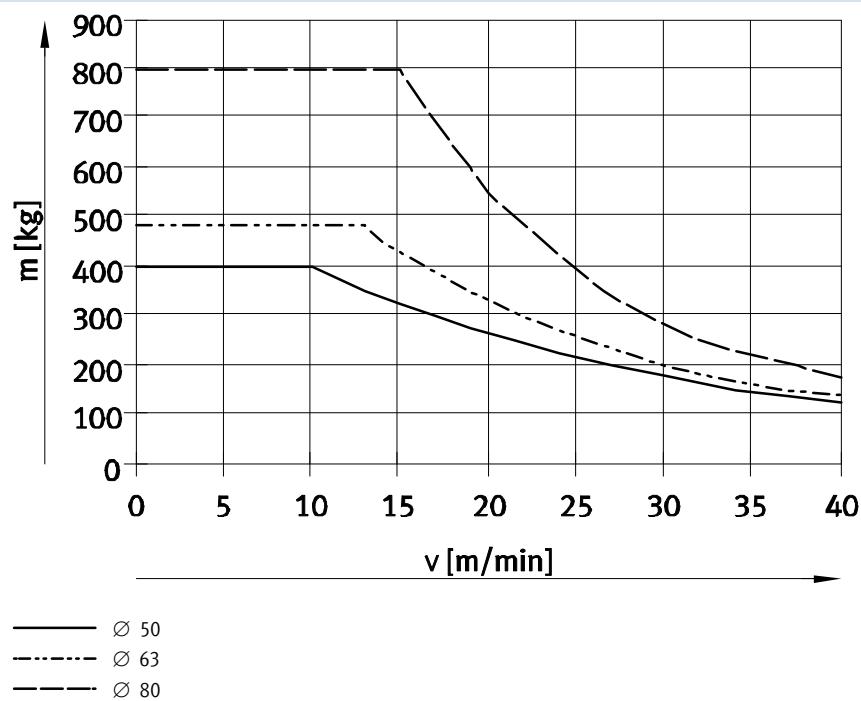

Stopper cylinders DFST

Technical data

FESTO

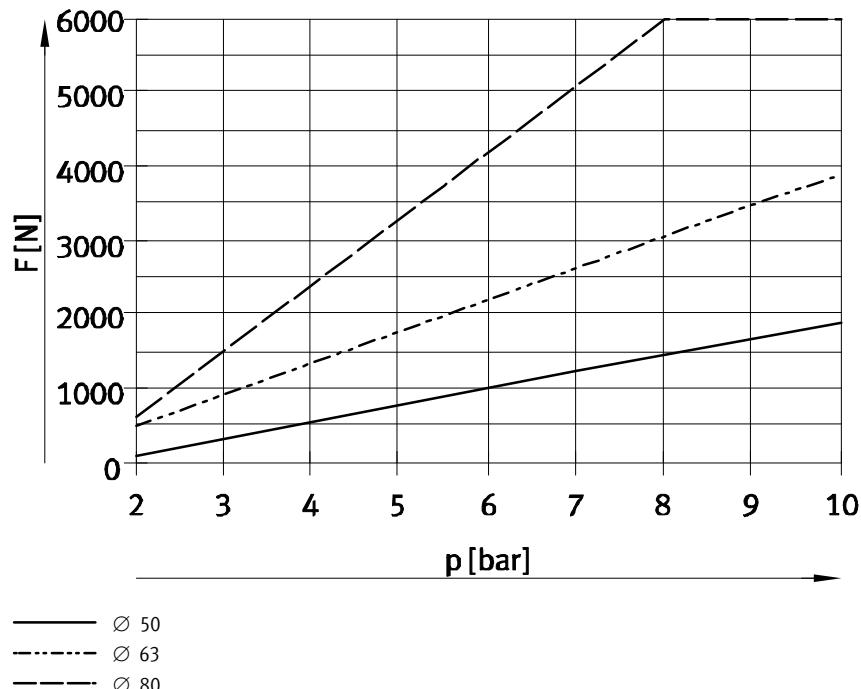

Permissible mass m as a function of the conveyor speed v

The values in the graph opposite take into account a friction value of $\mu = 0.1$.

Permissible transverse force F_Q during the switching operation as a function of the pressure p

The applied load causes a transverse force to act on the piston rod. To ensure the function of the cylinder, a certain minimum pressure must be applied.

Stopper cylinders DFST

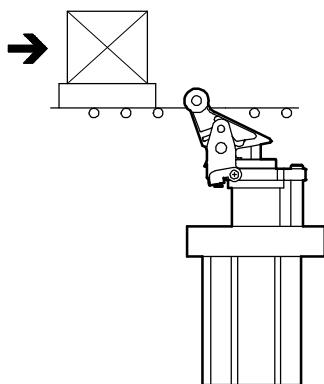

FESTO

Technical data

Selection aid

Stopping a workpiece carrier

The stopper cylinder is used to brake an individual workpiece carrier, without or with end position locking. The toggle lever and oil damper are pushed into the end position again for each new workpiece carrier.

Example

Given:

Friction value $\mu = 0.1$

Delivery speed $v = 20 \text{ m/min}$

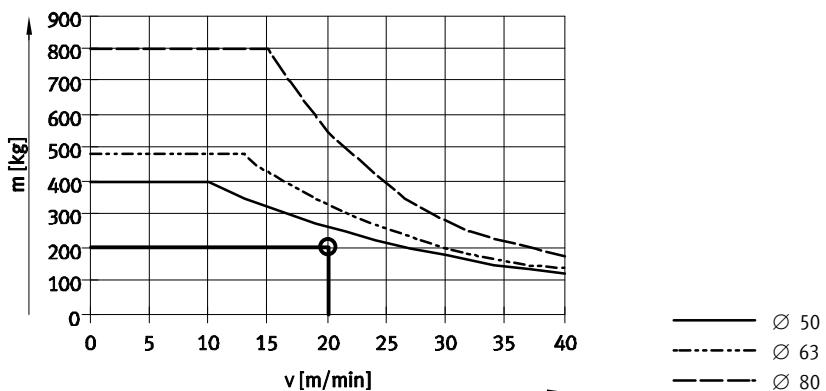

Workpiece carrier with workpiece $m = 200 \text{ kg}$

Operating pressure $p = 6 \text{ bar}$

Choice: Stopper cylinder DFST-50

1. Checking the permissible mass

The maximum permissible mass at a delivery speed of 20 m/min is 250 kg. This means that the total mass of the workpiece carrier and workpiece of 200 kg is permissible.

2. Checking the permissible transverse force during the switching operation

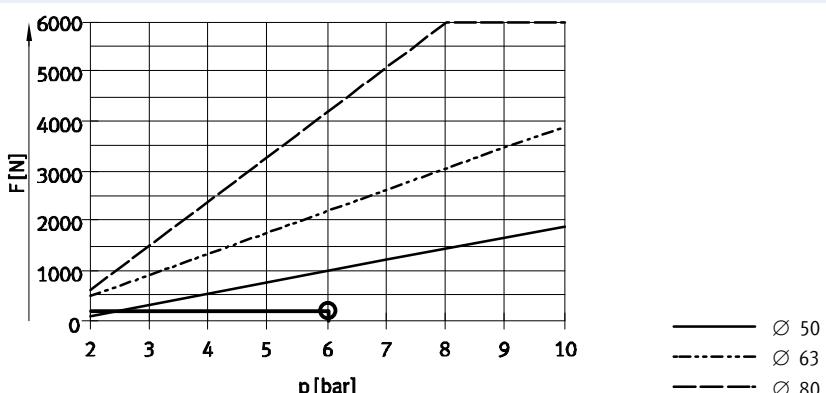

Transverse force F_Q = friction force

F_{Friction}

$$\begin{aligned} F_{\text{Friction}} &= \mu \times m \times g \\ &= 0.1 \times 200 \text{ kg} \times 9.81 \text{ m/s}^2 \\ &= \text{approx. } 200 \text{ N} \end{aligned}$$

The maximum permissible transverse force at an operating pressure of 6 bar is 1000 N.

This means that the transverse force of 200 N is permissible.

Stopper cylinders DFST

Technical data

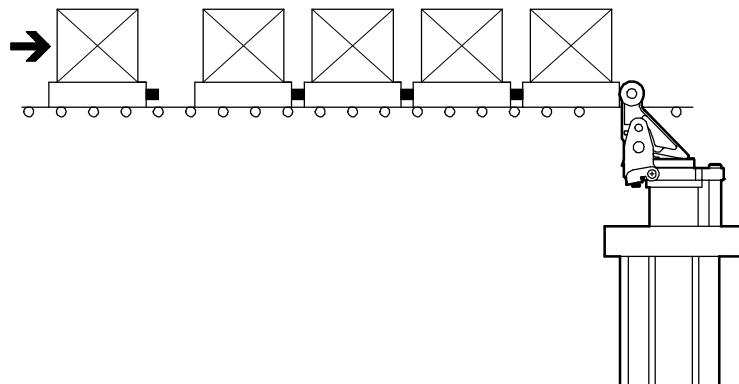

FESTO

Selection aid

Stopping or separating several workpiece carriers

The stopper cylinder is used to separate workpiece carriers. Further workpiece carriers accumulate behind carriers that have already pushed the toggle lever into its end position.

Since the oil damper in the stopper cylinder is inoperative in this case, a certain amount of cushioning between the workpiece carriers must be guaranteed (e.g. elastomer elements).

Example

Given:

Friction value $\mu = 0.1$

Delivery speed $v = 15 \text{ m/min}$

Workpiece carrier with workpiece $m = 100 \text{ kg}$

Operating pressure $p = 6 \text{ bar}$

Maximum number of workpiece carriers accumulating simultaneously $n_{\text{Group}} = 1$

Maximum number of all queued workpiece carriers $n_{\text{Queue}} = 5$

Maximum number of all advancing workpiece carriers $n_{\text{Queue-1}} = 4$

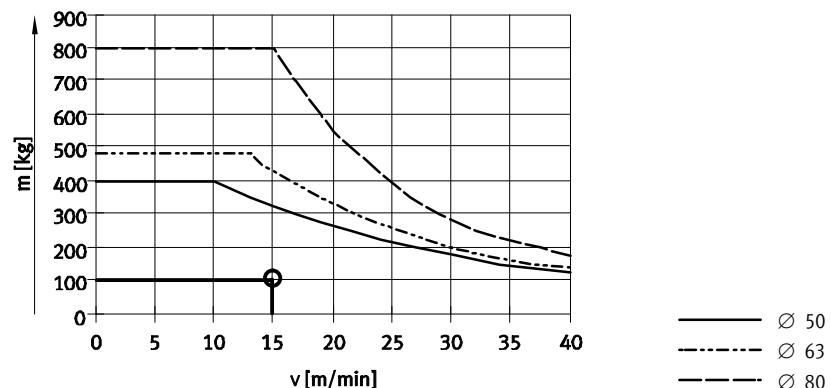

Spring travel of the workpiece carrier buffer $s_F = 10 \text{ mm}$

Choice: Stopper cylinder DFST-50

1. Checking the permissible mass of the first workpiece carrier

The maximum permissible mass at a delivery speed of 15 m/min is 320 kg.

This means that the total mass of the workpiece carrier and workpiece of 100 kg is permissible.

2a. Calculation of the maximum permissible impact force when workpiece carriers accumulate behind a carrier at the stopper cylinder

With the DFST-50, the maximum

permissible impact force is 3000 N.

This means that at a total force of 1,150 N, the number of workpiece carriers is permissible.

Impact force calculation:

$$F_{\text{Impact}} = \frac{(n_{\text{Group}} \times m) \times v^2}{s_F} = \frac{(1 \times 100\text{kg}) \times (15\text{m}/60\text{s})^2}{0.01\text{m}} = \text{ca.}650\text{N}$$

Friction force:

$$F_{\text{Friction}} = \mu \times (n_{\text{Queue}} \times m) \times g = 0.1 \times (5 \times 100\text{kg}) \times 9.81\text{m/s}^2 = \text{ca.}500\text{N}$$

Max. total force:

$$F_{\text{Total force}} = F_{\text{Impact}} + F_{\text{Friction}} = 650\text{N} + 500\text{N} = 1150\text{N}$$

Stopper cylinders DFST

FESTO

Technical data

Selection aid

2b. Checking the permissible transverse force during the switching operation

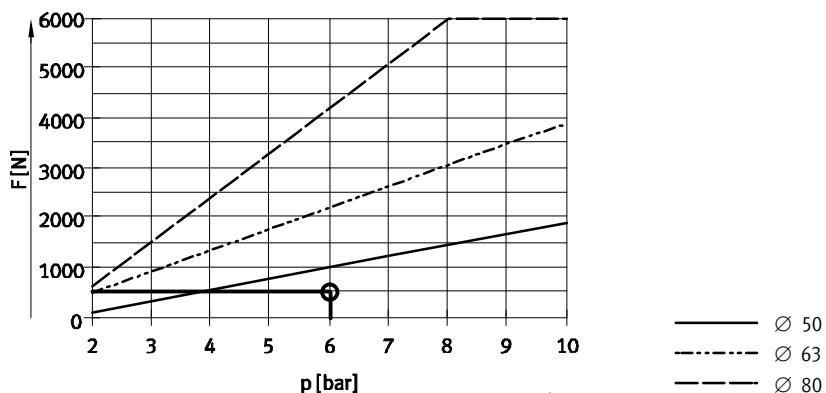

Transverse force $F_Q =$

friction force $F_{Friction}$

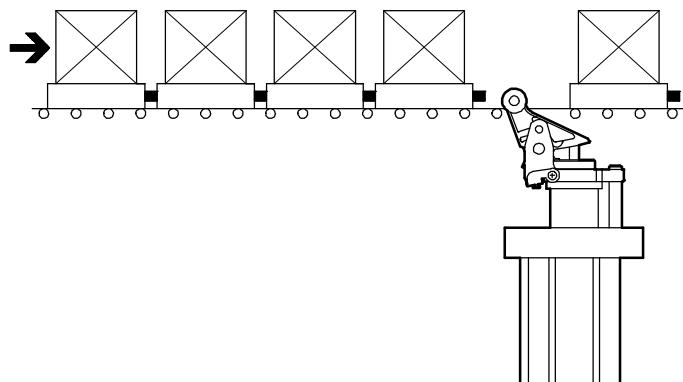

$$F_{Friction} = 500 \text{ N}$$

The maximum permissible transverse force at an operating pressure of 6 bar is 1000 N.

This means that the transverse force of 500 N is permissible.

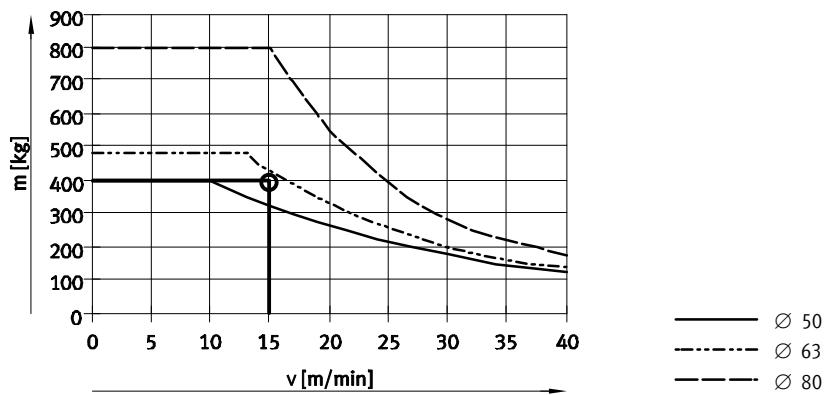

3. Separating and advancing the workpiece carriers

The maximum permissible mass with the DFST-50 at a delivery speed of 15 m/min is 320 kg.

Since the total mass of the four workpiece carriers advancing on the stopper cylinder is 400 kg, the next largest stopper cylinder must be selected for separating.

Max. total mass:

$$m_{Total\ force} = n_{Queue-1} \times m = 4 \times 100\text{kg} = 400\text{kg}$$

Result

The stopper cylinder DFST-63 must be selected for separating five workpiece carriers.

Mounting options for solenoid valves and valve functions

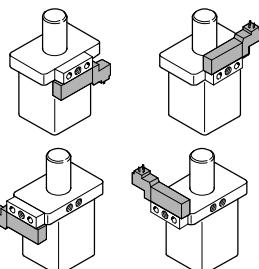

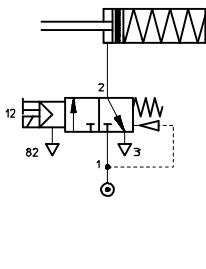

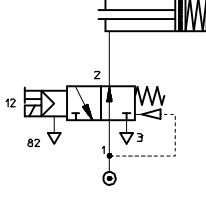

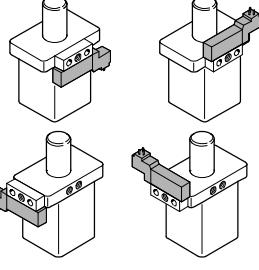

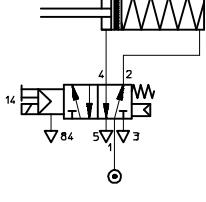

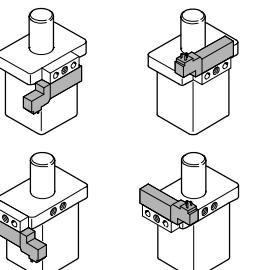

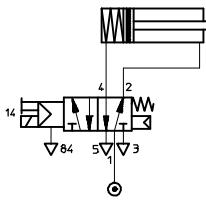

A solenoid valve MEH, MEBH, MOEH or MOEBH can be mounted on the stopper cylinder for quick, direct

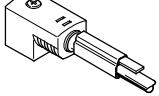

actuation of the cylinder. The valve must be connected to the cylinder via an intermediate plate ZVA. The posi-

tion of the piston rod when the sole-

noid valve is in the normal position depends on the valve type and the

position of the valve on the cylinder.
